Acknowledgement

The author wishes to express his sincere appreciation to professor Dr. Omar Aly M. El-Nawawy, Professor of reinforced concrete structures, Ain Shams University for his constant supervision, planning, precise advice and constant encouragement during all phases of this research work.

The authors is deeply indebted to Dr. Samir Abdel-Meguid Hekal, Lecturer, structural engineering department, Ain Shams University for his constant supervision, continuous encouragement and helpful suggestions which have contributed to achievement of the research work.

Finally, the authors dedicates his thesis to his family, for their continuous encouragement, sacrifice and fruitful care.

Abstract for the Master of Science
Thesis Submitted by

Eng. Hossam El-Din Hassan Fouad Ahmed Abdel-Wahid

Title of the thesis: 3-D FINITE ELEMENT MODEL FOR
ANALYSIS OF R.C. STRUCTURES.

Supervisors: Prof. Dr. Omar Aly Moussa El-Nawawy
Dr. Samir Abdel-Meguid Hekal

ABSTRACT

The thesis deals with the study of using finite element method for analysis of reinforced concrete beams (Simple and Continuous beams). A three-dimensional model for finite element analysis of reinforced concrete based on smeared cracking approach is presented. The chosen element is three dimensional isoparametric brick element with twenty nodes. The steel reinforcement is smeared into equivalent steel layers with uniaxial properties in the bar direction (8-node element). Perfect bond between concrete and reinforcement is assumed.

Different experimental results of several tests conducted on R.C. Beams are taken as examples to show the applicability and the accuracy of the presented program. In these examples, the analytical results are compared with the experimental results including deflections and strains.

Finally, useful recommendation regarding the analysis of R.C Beams using the finite element method are stated as it is an efficient tool to predict the strains, deformations, failure loads and defections of the tested beams.

Key Words: R.C. beams-Finite element - 3-D-Mathematical model-Constitutive law- Non-linear behavior-Material behavior- Solution of non-linear equation.
