Biochemistry Department

The Protective Role of Sesame Oil on the Fertility of Male Albino Rats Exposed to Penconazole

Thesis Submitted by

Rania Abd Allah Mohamed
(M.Sc. in Biochemistry, 2009)

**For the Award of the Degree of Doctor of Philosophy
of Science in Biochemistry**

Under Supervision of

Prof. Dr. Ibrahim H. Borai
Prof. of Biochemistry
Faculty of Science
Ain Shams University

Prof. Dr. Azza A. Atef
Prof. of Biochemistry
Faculty of Science
Ain Shams University

Prof. Dr. Afaf A. El-Kashoury
Prof. of Mammalian Toxicology
Central Agric. Pesticides Lab
Agric. Res. Center

Dr. Mahmoud M. Said
Assistant Prof. of Biochemistry
Faculty of Science
Ain Shams University

Ain Shams University
Faculty of Science
Biochemistry Department

2017

بِسْمِ اللَّهِ الرَّحْمَنِ الرَّحِيمِ

"قَالُوا سُبْحَانَكَ
لَا عِلْمَ لَنَا
إِلَّا مَا عَلَّمْتَنَا
إِنَّكَ أَنْتَ
الْعَلِيمُ
الْحَكِيمُ"

صدق الله العظيم
(سورة البقرة آية 32)

Biography

Name: Rania Abd Allah Mohamed

Date and Place of Birth: 12/11/76, Cairo, Egypt

Date of Graduation: 2000

Degree Awarded: M.Sc. in Biochemistry, 2009

Grade: Ph.D. in Biochemistry

Declaration

*This thesis has not been submitted for
a degree at this or any other university*

Rania Abd Allah Mohamed

Dedication

*I dedicate this work with all my love to
my family*

Acknowledgment

*First of all, cordial thanks are due to **ALLAH**, who enabled me to overcome all the problems, which faced me throughout the work.*

*Special debt and gratitude are due to **Prof. Dr. Ibrahim Hassan Borai**, Prof of Biochemistry, Faculty of Science, Ain Shams University, for his supervision, support, encouragement, valuable advice and critical reading of the manuscript.*

*Appreciation and deep thanks go to **Dr. Azza Ahmed Atef**, Prof. of Biochemistry, Faculty of Science, Ain Shams University, for her supervision, encouragement, fruitful advices and critical reading of the manuscript.*

*I am deeply grateful and indebted to **Dr. Afaf Abd El-Hamid El-Kashoury**, Prof. of Toxicology, Department of Mammalian Toxicology, Central Agricultural Pesticides Lab. (CAPL), for her kind supervision, planning of the study, her great help and constant aid in the practical work during this thesis and valuable suggestions, encouragement, motivation during this work, and critical reading of the thesis.*

*I would like also to express my deep thanks and appreciation to **Dr. Mahmoud Mohamed Said**, Assistant Prof. of Biochemistry, Faculty of Science, Ain Shams University, for fruitful discussion, efforts , practical help, valuable suggestion, guidance through the work and critical reviewing of the thesis.*

*I would like, also, to express my sincere thanks and deep gratitude to **Dr. Islam Noeman Nasr**, former Head of Pesticide Residues and Environmental Pollution Department, Central Agricultural Pesticides Lab, for his practical help.*

I would like to acknowledge the valuable histological comments provided by Dr Adel M. Bakeer, Prof. of Pathology, Faculty of Veterinary Medicine, Cairo University, Egypt.

Thanks are also extended to the head and all members of Biochemistry Department, Faculty of Science, Ain Shams University.

Grateful thanks for Director of Central Agricultural Pesticides Lab., Head of Mammalian and Aquatic Toxicology Department. Special thanks to my friends in Mammalian and Aquatic Toxicology Department for their help.

Contents

Abstract	
List of Tables	i
List of Figures	iii
List of Abbreviation	a
Chapter I: Introduction and Aim of the Work	
Introduction	1
Aim of the work	5
Chapter II: Review of Literature	
Introduction	6
The hypothalamic-pituitary-gonadal axis	7
Feedback control of gonadotropins	8
The hypothalamic-pituitary-thyroid axis	11
Biosynthesis of thyroid hormones	11
Feedback control of thyroid hormones	13
The male reproductive tract	15
Hormonal factors that stimulate spermatogenesis	19
Biosynthesis and mode of action of testosterone in testes	22
Site of estrogen biosynthesis in testes	23
Endocrine disruptors	26
Routes of exposure to endocrine disruptors	27
Mechanism of action EDCs	29
Potential effect of endocrine disruptor on male reproductive tract	31
Oxidative stress	31
Enzymatic antioxidants	34
Non-enzymatic antioxidants	34
Pesticides toxicity	36
Conazole toxicity	37
Penconazole	39
Effect of conazole on fertility	45
Effect of conazole on reproductive and sex hormones	47

Effect of conazole on thyroid hormones	50
Effect of conazole on oxidative status of testes	51
Sesame oil	52
Effect of sesame oil on fertility	54
Chapter III: Materials and Methods	
3.1- Materials	56
3.1.1- Experimental animals	56
3.1.2- Chemicals	56
a. Penconazole	56
b. Sesame seed oil	57
3.1.3- Experimental design	57
a- Acute oral toxicity study	57
b- Experimental Study	58
3.1.4- Collection of blood and sampling	60
3.1.5- Collection of body organs	60
3.1.6- Preparation of testicular tissue homogenate	60
3.1.7- Extraction of vitamin A and E from testicular tissue	61
3.2- Methods	61
3.2.1- Fertility related parameters	61
a) Estimation of sperm concentration	61
b) Assessment of sperm motility	62
c) Assessment of sperm viability	62
d) Assessment of sperm morphology	62
3.2.2- Biochemical studies	63
3.2.2.1- Blood Studies	63
a) Determination of serum total testosterone level	63
b) Determination of serum estradiol level	65
c) Determination of serum follicle stimulating hormone level	66
d) Determination of serum luteinizing hormone level	69
e) Determination of serum thyroxine level	72

f) Determination of serum triiodothyronine level	75
3.2.2.2- Tissue Studies	77
a) Determination of testicular malondialdehyde level	77
b) Determination of testicular reduced glutathione level	79
c) Estimation of testicular total protein concentration	81
d) Determination of testicular catalase activity	84
e) Determination of testicular superoxide dismutase activity	86
f) Estimation of testicular vitamin C concentration	88
g) Determination of testicular vitamin E concentration	91
h) Estimation of testicular vitamin A concentration	93
3.2.2.3- Determination of penconazole concentration in testes and plasma	94
3.3. Histological Studies	96
3.4. Statistical Analysis	97
Chapter IV: Results	98
Chapter V: Discussion	139
Conclusion	168
Recommendation	169
Summary	170
References	175
Arabic Abstract	
Arabic Summary	

List of Tables

Table No.		Pages
(1)	: Table for calculation of median lethal dose.	59
(2)	: Detremination of the acute toxicity following a single oral ascending penconazole dose in rats.	99
(3)	: The percentage survival of rats at the end of the treatment period (12 weeks) in the different groups.	100
(4)	: Effect of treatment with sesame oil and/or penconazole on body weight, relative and absolute testis and epydidymus weights in male rats.	102
(5)	: Effect of treatment with sesame oil and/or penconazole on fertility indices in male rats.	107
(6)	: Effect of treatment with sesame oil and/or penconazole on the level of serum testosterone, E ₂ , FSH and LH in male rats.	111
(7)	: Effect of treatment with sesame oil and/or penconazole on the level of serum T ₃ and T ₄ in male rats.	115
(8)	: Effect of treatment with sesame oil and/or penconazole on testicular MDA and GSH as well as CAT and	118

SOD activities in male rats.

- | | | | |
|------|---|--|-----|
| (9) | : | Effect of treatment with sesame oil and/or penconazole on testicular vitamins (A, C and E) in male rats. | 122 |
| (10) | : | Recovery rate of penconazole. | 126 |

List of Figures

Figure NO.		Pages
(1)	: Histological structure of the pituitary gland	7
(2)	: The hypothalamic-pituitary gonadal axis	10
(3)	: Chemistry of thyroxine (T_4) and triiodothyronine (T_3) formation	13
(4)	: Thyroid system diagram and feedback mechanism	14
(5)	: Internal structure of the testes and cross section of a seminiferous tubule	17
(6)	: Schematic diagram illustrating the morphological structure of adult Sertoli cells and their interactions with the different germ cells	18
(7)	: The stages of spermatogenesis	20
(8)	: Anatomical structure of the epididymus	21
(9)	: Biosynthesis of testosterone from cholesterol	23
(10)	: Schematic diagram of the actions of testosterone and dihydrotestosterone	24
(11)	: Estrogen source and targets in the reproductive male tract.	25
(12)	: Outline of normal hormonal response and EDCs interference with hormone receptors	30

(13)	: Scheme of harmful effects of reactive oxygen species (ROS) on male fertility	33
(14)	: Antioxidant scavenging pathways of free radicals by antioxidant enzymes	34
(15)	: Biosynthesis of phytosterols, ergosterol, and mammalian sex steroid hormones	38
(16)	: Proposed metabolic pathways of penconazole	44
(17)	: Structure of penconazole.	58
(18)	: Standard curve of bovine serum albumin by Bradford method.	84
(19)	: Statistical significance of body weight in different groups.	103
(20)	: Statistical significance of absolute testes weight in different groups.	103
(21)	: Statistical significance of relative testes weight in different groups.	104
(22)	: Statistical significance of absolute epididymus weight in different groups.	104
(23)	: Statistical significance of relative epididymus weight in different groups.	105
(24)	: Statistical significance of sperm count in different groups.	108

(25)	: Statistical significance of sperm motility in different groups.	108
(26)	: Statistical significance of sperm viability in different groups.	109
(27)	: Statistical significance of abnormal forms of sperm in different groups.	109
(28)	: Statistical significance of serum testosterone level in different groups.	112
(29)	: Statistical significance of serum E ₂ level in different groups.	112
(30)	: Statistical significance of serum FSH level in different groups.	113
(31)	: Statistical significance of serum LH level in different groups.	113
(32)	: Statistical significance of serum T ₃ level in different groups.	116
(33)	: Statistical significance of serum T ₄ level in different groups.	116
(34)	: Statistical significance of testicular MDA level in different groups.	119
(35)	: Statistical significance of testicular GSH level in different groups.	119
(36)	: Statistical significance of testicular SOD activity in different groups.	120
