Level Structure In Some Slightly And Strongly Deformed Nuclei.

THESIS
SUBMITTED FOR THE DEGREE OF
DOCTOR OF PHILOSOPHY
IN NUCLEAR PHYSICS

By
ASHRAF HUSSEIN MOSTAFA
GHANEM

TO
Physics Department Faculty Of Science
Ain Shams University

1997

ACKNOWLEDGMENTS

First of all thanks to God who helped me greatly in this work.

I wish to express my appreciation and grateful respect to Prof. Dr. *M. El-Khashan*, head of Physics Department, Faculty of Science, Ain-Shams University for his kind help, useful comments and valuable criticism.

I wish to express my deep thanks and gratitude to Prof. Dr. *M. El-Morsi*, Physics Department, Faculty of Science, Ain-Shams University for continuous guidance and valuable suggestions and criticism throughout the period of this research.

I feel much honored to express gratitude and deepest thanks to Prof. Dr. *S. U. EL-Khameesy*, Physics Department, Faculty of Science, Ain-Shams University not only for suggesting the investigated subjects but also for his valuable supervision, useful discussion, great help and continuous encouragement.

I am deeply indebted and cordially grateful to Prof. Dr. *H. M. Hanafi*, Physics Department, Faculty of Science, Cairo University, El-Fayum Branch, for continuous guidance and valuable suggestions and criticism throughout the period of this research.

Also, I wish to express my deep thanks to Dr. *M. Hasan Khalil* and Dr. *N. El. Faramawi*, lecturers of Physics, Faculty of Science, Ain-Shams University for their help in the part of theoretical and experimental work.

I would like also to express many thanks *to all staff members* of Physics Departments, Faculty of Science, Cairo and Ain-Shams Universities for their help and encouragement.

Finally, I wish to express my deep thanks and gratitude to my wife for her help and perfect continuous support.

ABSTRACT

Ashraf Hussein Mostafa Ghanem, Level structure in some slightly and strongly deformed nuclei., Ain Shams University, Faculty Of Science, Physics Departement.

Gamma singles spectra as well as electron singles spectra measurements were performed using hyper pure Ge detector and silicon detector. Making use of internal conversion electron measurements and X - ray sum peak technique, the multipolarity of the following gamma transitions in ^{240}Pu were identified as 251.4 (E1), 263.3 (E1), 289.2 M1(E2), 303.1 (E1), 340.7 (M1), 507.3 (E1), 554.5 (E1), 597.4 (E1), 758.65 (E2) and 817.9 (E2) keV.

A Possible new gamma transition of 1116 keV was identified beside the weak gamma lines of 1113.38 keV - 1223.77 keV previously reported were confirmed. Also the multipolarity of 100.18 keV gamma transition was formed to be E2.

Furthermore, we have described several methods of calculating the observed energy levels making use of different theoretical models (VMI, VMINS3, NS, and IBM models).

In addition, the effective charges of proton and neutron in the region of study were found to be $e_{\pi} = 0.52 \text{ eb}$ and $e_{\nu} = 0.24 \text{ eb}$.

Key words

Even-Even nuclei, (Th, U, Pu) isotopes, rotational, vibrational, Variable moment of inertia, Nuclear softness, Variable moment of inertia nuclear softness, interacting boson model.

CONTENTS

	Page NO.
ACKNOWLEDGEMENTS	i-ii
ABSTRACT	iii-iii
INTRODUCTION	ix-x
LIST OF TABLES	xi-xii
LIST OF FIGURES	xiii-xiv
CHAPTER(I): THEORETICAL ASPECTS ON NUCLEAR STRUCTURE.	1-25
1.1 INTRODUCTION	1-1
1.2 NUCLEAR-SHELL MODEL	1-1
1.2.1 The Shell Theory Potential	1-2
1.2.1a Infinite square well	2-3
1.2.1b Harmonic oscillator potential	3-5
1.3 THE COLLECTIVE MODEL.	5-5
1.3.1 Introduction	5-6
1.3.2 General Consideration Of Collective Motion	6-6
1.3.3 Rotational States Of Deformed Nuclei	6-7
1.3.4 Vibrational States Of Nuclei	8-9

1.4 THE VARIABLE MOMENT OF INERTIA (VMI).	9-13
1.4.1 Backbending Phenomenon.	14-17
1.5 NUCLEAR SOFTNESS MODEL	17-19
1.5.1 The Two Parameters NS Model	20-20
1.5.2 The Three Parameters NS Model	20-20
1.5.3 Variable Moment Of Inertia Nuclear Softness Model.	20-21
1.6 THE INTERNAL CONVERSION PROCESS AND THE REDUCED TRANSITION PROBABILITY.	22-22
1.6.1 Internal Conversion Process.	22-23
1.6.2 Reduced Transition Probability	23-25

CHAPTER(II):EXPERIMENTAL TECHNIQUE. 26-43

2.1 RADIATION DETECTORS.	26-26
2.1.1 Semiconductor Radiation Detectors	26-27
2.1.1a Surface barrier detectors.	27-29
2.1.1b Lithium-drifted germanium detectors.	29-29
2.1.1c High purity germanium (HPGe) detectors.	29-30
2.2 GAMMA-RAY SPECTROMETER.	30-33
2.3 SETTING AND CALIBRATION OF GAMMA RAY SPECTROMETER	33-34
2.3.1 Energy Calibration.	34-36

2.3.2 Relative Efficiency Curve Of HPGe Detector.	36-38
--	-------

2.3.3 Absolute And Relative Intensity Determinations	38-43
---	-------

CHAPTER (III) : THE MULTIPOLE CHARACTER OF SOME GAMMA TRANSITIONS IN ^{240}Pu AND ^{182}W . 44-69

3.1 ^{240}Pu LEVEL STRUCTURE.	44-44
3.1.1 Introduction.	44-45
3.1.2 Experimental Procedure.	45-46
3.1.3 Results And Discussion.	46-55
3.2 K-X RAY AND I.C.C. OF GAMMA TRANSITIONS IN ^{240}Pu .	55-61
3.3 ^{182}W LEVEL STRUCTURE.	61-61
3.3.1 Introduction.	61-61
3.3.2 Experimental Technique.	61-62
3.3.3 Internal Conversion Coefficients (ICC).	62-62
3.3.3a Sum-peak technique.	62-69

CHAPTER (IV):GROUND STATE BANDS IN SOME ACTINIDE EVEN-EVEN NUCLEI. 70-88

4.1 Analysis of The Ground State Bands of Some Actinide Nuclei.	70-77
--	-------

4.2	Backbending Phenomena.	77-83
4.3	Reduced Transition Propability Of The Ground State Bands Of Some Actinide Nuclei.	83-84
4.4	The Effective Charges Around The Mass Region Of Some Actinides Isotopes.	84-88
	CONCOLUSIONS.	89-90
	REFERENCES.	91-96
	SUMMARY IN ARABIC.	97-98
