Studies on the Control of Nuclear Materials by Spectroscopic Methods

A thesis submitted
by

Yasser Fouad Abdel Hamid Lasheen
(B.Sc Chemistry)

Hot Laboratories Centre
Atomic Energy Authority

٢١٠٢٥٨

for

The degree of Master of Sciences in Chemistry
to

Department of Chemistry
Faculty of Science (Benha)
Zagazig University

Supervisors

the late\ Prof. Dr M. E. Abdel-Badia
Prof. of analytical Chemistry
Faculty of science (Benha)
Zagazig University

Prof. Dr A.A.Abdel-Rassoul
Emm. Prof. of Nuclear Chemistry
Egyptian Atomic Energy Authority

Prof. Dr H. F. Aly
Prof. of Nuclear and Analytical Chemistry
Chairman of Atomic Energy Authority

1998

Supervisors

the late\ Prof. Dr M. E. Abdel Badia
Prof. of Analytical Chamistry
Faculty of Science (Benha)
Zagazig University

Prof. Dr A.A.Abdel-Rassoul
Emm. Prof. of Nuclear Chemistry
Egyptian Atomic Energy Authority

Prof. Dr H. F. Aly
Prof. of Nuclear &Analytical Chemistry
Chairman of Atomic Energy Authority

Contents

Contents.....	i
List of tables.....	v
List of figures.....	vii
Acknowledgment.....	xi

CHAPTER-I INTRODUCTION

1.1 Inshas research reactors.....	5
1.2 Radiochemistry of uranium.....	8
1.3 Separation chemistry of uranium.....	12
i-precipitation reactions.....	12
ii-solvent extraction.....	14
iii-ion exchange.....	16
iv-volatilization.....	17
v-electrochemical methods.....	17
1.4 Nuclear spectroscopic determination of uranium.....	18
i- α -spectroscopic measurements.....	18
ii- γ -spectroscopic measurements.....	24
1.5 Aim of work.....	27

CHAPTER-II EXPERIMENTAL

2.1 Materials and test samples	30
2.1.1 Chemicals and reagents	30
2.1.2 Sample preparation	30
i-dissolution of fuel material	31
ii-electrolytic cell	31
iii-source preparation by electrodeposition	33

a) effect of uranium concentration.....	35
b) effect of time	35
c) effect of voltage.....	35
d) effect of pH	36
e) effect of stirring rate.....	36
f) mixed natural and enriched uranium sources.....	36
2.2 Alpha spectroscopic measurements	37
2.2.1 Instrumentation	37
2.2.2 Calibration of working system.....	38
i-energy calibration.....	38
ii-counting efficiency	41
iii-effect of geometry	41
iv-effect of counting period.....	41
v-spectroscopic measurements	43
vi-determination of unknown α -source.....	44
2.3 γ -Spectroscopic measurements	44
2.3.1 Instrumentation	44
2.3.2 Calibration of working system	46
i-energy calibration	46
ii-correction for external background.....	47
iii-photopeak detection efficiency	47
iv-effect of geometry	51
v-effect of counting period	51
vi-spectroscopic measurements.....	51
2.4 Spectrophotometric determination of uranium.....	54
2.4.1 Calibration curve.....	54
2.4.2 Determination of uranium in enriched sample solutions....	54
2.4.3 Efficiency of electrodeposition process.....	57

CHAPTER-III

RESULTS and DISCUSSION

3.1 Optimisation of α -spectrometric analysis.....	60
3.1.1 Counting efficiency.....	61
3.1.2 Reliability of measurements.....	64
i-standardisation of nuclear measurements.....	66
ii-attenuation in nuclear measurements.....	72
iii-self absorption and back scattering correction factors.....	73
iv-applicable calculations.....	76
3.1.3 Quantitative approach.....	80
3.2 Factors affecting electrodeposition of uranium.....	89
3.2.1 Effect of time.....	89
3.2.2 Effect of applied voltage.....	94
3.2.3 Effect of pH.....	95
3.2.4 Effect of mechanical stirring.....	98
3.3 Analysis of different uranium isotopes.....	101
3.3.1 Isotopic analysis by α -spectroscopy.....	104
i-optimum conditions.....	104
ii-theoretical calculations.....	109
iii-isotopic analysis by direct radioactivity measurements.....	115
iv- isotopic analysis by corrected radioactivity levels.....	118
a) adjustment factors.....	120
b) correction factors.....	121
c) isotopic analysis.....	125
v-conclusion of alpha spectroscopic measurements.....	129
3.3.2 Isotopic analysis by γ - spectroscopy.....	133
i-measuring conditions.....	134
ii-count errors.....	134
iii-recommended of γ -energy lines.....	139
iv-results of γ -ray measurements.....	144

3.4 Conclusion.....	144
Summary.....	147
References.....	155
Arabic summary.....	163

List of tables

Table (1.1): Fuel materials mostly used for different types of nuclear reactors.....	3
Table (1.2): Different uranium isotopes.....	11
Table (2.1): Determination the detection efficiency of HPGe-measuring system using natural uranium standard.....	50
Table (2.2): Characteristic photons emitted from uranium and thorium isotopes.....	53
Table (2.3): Calibration curve for spectrophotometric determination of uranium by the arsenazo-1 method.....	55
Table (2.4): Spectrophotometric determination of uranium concentration in enriched solution by the arsenazo-1 method...	58
Table (2.5): Efficiency of electrodeposition process.....	59
Table (3.1): Change in counting efficiency of used system with distance between measured source and used detector.....	62
Table (3.2):Adjustment factor for radioactivity measurements in uranium analysis by α -spectroscopy.....	67
Table (3.3): Determination of self absorption and internal back scattering correction factors of geometrical uranium sources by α -spectroscopy.....	74
Table (3.4): Determination of α -radioactivity levels in unknown sources.....	82
Table (3.5): Quantitative approach for α -spectroscopic determination of uranium separated by electrodeposition.....	86
Table (3.6): Effect of time on electrodeposition of uranium.....	91
Table (3.7): Effect of applied voltage on electrodeposition of uranium.....	96
Table (3.8): Effect of pH on electrodeposition of uranium.....	99
Table (3.9): Effect of mechanical stirring on electrodeposition.....	102
Table(3.10): Effect of counting time on the percent error in	

α -spectroscopic measurements of uranium isotopes with natural isotopic composition.....	107
Table (3.11): Effect of counting time on the percent error in α -spectroscopic measurements of 10 %enriched.....	110
Table (3.12): Calculated radioactivity levels in samples containing natural and enriched uranium.....	113
Table (3.13): Calculated isotopic composition of natural and enriched uranium.....	114
Table (3.14): Isotopic composition determination by direct radioactivity measurements.....	116
Table (3.15): Comparative study between the calculated and measured isotopic composition values in different test samples containing natural and enriched uranium.....	117
Table (3.16): Adjustment factors for radioactivity levels of uranium-234 and uranium-235 isotopes.....	122
Table (3.17): Correction factors for radioactivity measurements of uranium isotopes by α -spectroscopy.....	124
Table (3.18): Determination of the isotopic composition for natural and enriched uranium sources based on the corrected radioactivity levels.....	127
Table (3.19): comparative study between the calculated and corrected isotopic composition values in different test samples containing natural and enriched uranium.....	128
Table (3.20): Effect of counting time on the count error using a natural and enriched sources.....	136
Table (3.21): Determination of absolute γ -ray radioactivity levels in a sample of natural uranium.....	140
Table (3.22): Determination of absolute γ -ray radioactivity levels in a sample of enriched uranium.....	143
Table (3.23): Isotopic analysis of both natural and enriched uranium samples.....	146

List of figures

Fig.(1.1): Nuclear fuel cycle activities.....	4
Fig.(1.2): Dissolution of Inshas reactor fuel ($\text{UO}_2\text{-Mg}$) in nitric acid...	7
Fig.(1.3): Uranium natural decay series.....	9
Fig.(2.1): Nuclear fuel element used in EG-RR-1.....	32
Fig.(2.2): Electrodeposition cell for uranium separation.....	34
Fig.(2.3): Block diagram of alpha-ray spectroscopic system.....	39
Fig.(2.4): Illustrative presentation of α -measuring set up.....	40
Fig.(2.5): Alpha-ray spectrum for energy calibration.....	42
Fig.(2.6): Alpha-ray spectrum for enriched uranium sample.....	45
Fig.(2.7): Energy calibration using standard γ -sources.....	48
Fig.(2.8): Gamma-ray spectrum for energy calibration.....	49
Fig.(2.9): Photopeak detection efficiency of used detector for different γ -energy levels.....	52
Fig.(2.10): Calibration curve for spectrophotometric determination of uranium.....	56
Fig. (3.1): Change in the counting efficiency of used detector with distance using a standard.....	65
Fig. (3.2): Calculated and measured radioactivity level of different standard uranium concentrations.....	69
Fig (3.3): α -Ray spectrum for natural uranium sample.....	71
Fig.(3.4): Mean adjustment factor to adjust the measured radioactivity levels of uranium-234.....	78
Fig.(3.5): Mean self absorption and internal backscattering factor for uranium determination by α -spectroscopy.....	79
Fig.(3.6): Determination of radioactivity levels of unknown α -sources..	81
Fig.(3.7): Determination the quantitative separation of uranium.....	90
Fig.(3.8): Effect of time on electrodeposition of uranium.....	93
Fig.(3.9): Effect of applied voltage on electrodeposition of uranium...	97
Fig.(3.10): Effect of pH on electrodeposition of uranium.....	100

Fig.(3.11): Effect of stirring rate on electrodeposition of uranium.....	103
Fig.(3.12): Effect of time on the percent count error in measuring uranium isotopes of natural isotopic composition.....	108
Fig.(3.13): Effect of time on the percent count error in measuring uranium isotopes in 10 % enriched sample.....	111
Fig.(3.14): % isotopic composition of uranium-238 in enriched test sources by direct radioactivity measurement.....	131
Fig.(3.15): % isotopic composition of uranium-235 in enriched test sources by corrected radioactivity measurement.....	132
Fig.(3.16): Effect of time on the percent count error in measuring uranium isotopes of natural isotopic composition.....	137
Fig.(3.17): Effect of time on the percent count error in measuring uranium isotopes in 10% enriched sample.....	138
Fig.(3.18): Gamma-ray spectrum for natural uranium sample.....	142
Fig.(3.19): Gamma-ray spectrum for enriched uranium sample.....	145
