ACKNOWLEDGEMENT

First and foremost, thanks to **God**, the most beneficent and merciful.

I would like to dedicate this work in remembrance of my late ***Professor Dr. Farahat El Gazar***, who passed away before its completion. His deep insight and extraordinary experience were instrumental in the planning and execution of this project. I will, forever, be indebted to him for his professional and moral support.

I wish to express my deepest gratitude to ***Dr. Farida Hussen El Rashidy***, Assistant Professor of Pediatrics, Faculty of Medicine, Menofiya University, for her scrupulous supervision, eminent guidance, generous encouragement, continuous support, valuable criticism and instructions. Her useful suggestions and wise systematic approach left their prints on the work. Indeed, I am very privileged and honored to have worked under her supervision.

Also, I would like to thank ***Professor Dr. Ahmed Abbass Raouf***, the Head of Biochemistry Department, Liver Institute, Menofiya University, for supervising this work. It is an honour to proceed under his supervision. Without his broad knowledge and generous cooperation, this work would never exist in such final form.

My deepest thanks and most sincere gratitude go to ***Dr. Ahmed Thabet Mahmoud***, Lecturer of Pediatrics, Faculty of Medicine, Menofiya University, for his kind observations, valuable corrections,

continuous encouragement, enlightening suggestions and creative ideas. I would like to take this opportunity to thank him for everything he has done for me.

My thanks are also directed to ***Dr. Hatem Mahmoud El Sebae***, Lecturer of Biochemistry, Faculty of Medicine, Menofiya University, for his valuable advice and for his help and assistance in the laboratory part of this work.

Osama Abd El Salam
