Dep. of anesthesiology and intensive Care

Cardiac Dysrhythmias In Relation To Anesthesia

Essay

Submitted for Fulfillment of Master Degree in Anesthesiology

Presented by

Amr Galal El-Sherbeny El-Sherbeny

M.B.B.C.H

Faculty of Medicine, Cairo University

Under Supervision of

Prof.Dr. Bahira Mohamed Tawfeek Helmy

Professor of Anesthesiology and Intensive Care

Faculty of Medicine- Ain Shams University

Dr. Hadeel Magdy Abd El-hamid

Assistant Professor of Anesthesiology and Intensive Care

Faculty of Medicine- Ain Shams University

Dr. Ahmed Abd El-Dayem Abd EL-haq

Lecturer of Anesthesiology and Intensive Care

Faculty of Medicine- Ain Shams University

Faculty of Medicine
Ain Shams University

2014

بِسْمِ اللَّهِ الرَّحْمَنِ الرَّحِيمِ

قَالَ

سَبِّحْ تَبَّحْ لَا تَعْزِلْ
إِلَّا مَا عَلِمْتَنَا إِنَّكَ أَنْتَ
الْعَلِيمُ الْعَظِيمُ

صدق الله العظيم

سورة البقرة الآية: ٣٢

Acknowledgment

- ✍ First and foremost I thank **Allah** for everything and especially for my steady steps I have been taking in my career.
- ✍ I would like to express my most sincere thanks and deepest gratitude to **Prof. Dr. Bahira Mohamed Tawfeek Helmy**, Professor of Anesthesia and Intensive care, Faculty of Medicine, Ain Shams University. I am deeply affected by her noble character, perfection, care and consideration. I am very much privileged and honored to have her as my supervisor. To her I owe much more than I can express.
- ✍ I would like also to express my most sincere thanks and deepest gratitude to **Dr. Hadeel Magdy Abd El-Hamid**, Assistant professor of Anesthesia and Intensive Care, Faculty of Medicine, Ain Shams University, for her remarkable effort, valuable comments and sincere advices.
- ✍ Special thanks for **Dr. Ahmed Abd El-Dayem Abd El-Haq**, Lecturer of Anesthesia and Intensive Care, Faculty of Medicine, Ain Shams University for his help and guide to finish this work.
- ✍ Last but not least, I want to thank my family, whom without their sincere emotional support, pushing me forward, this work would not have ever been completed.

✍ **Amr Galal El-Sherbeny**

Lists of Abbreviations

AFFIRM	: Association For Federal Information Resources Management
Ach	: Acetylcholine
AECG	: Ambulatory External Electrocardiogram
AF	: Atrial fibrillation
AHA	: American heart association
ALS	: Advanced Life Support
AMI	: Acute myocardial infarction
AP	: Action potential
APB	: Atrial premature beat
APD	: Action potential duration
ATP	: Adenosine triphosphate
AV	: Atrioventricular
AVN	: Atrioventricular node
AVNRT	: AV Nodal Reentrant Tachycardia
Bpm	: Beat per minute
C:V	: Compression Ventilation ratio
Ca²⁺	: Calcium
CABG	: Coronary artery bypass grafting
CAD	: Coronary artery disease
CBs	: Calcium channel Blockers
CC	: Cardiovascular Collapse
CHF	: Congestive heart failure
CL	: Chloride
CNS	: Central nervous system

CPAP	: Continuous Positive Airway Pressure
CPR	: cardiopulmonary Resuscitation
DADs	: Delayed afterdepolarizations
DC	: Direct current
EAD	: Early afterdepolarization
ECG	: Electrocardiogram
EPS	: Electrophysiological study
ESWL	: Extra-corporeal shock wave lithotripsy
ETT	: Endotracheal tube
FDA	: Food and Drug Administration
GIA	: Guide wire Induced Arrhythmia
H.B	: Heart block
HR	: Heart rate
HRS	: HeartRhythmSociety
i or I	: Electrical currents
I_{CaL}	: L-Type Ca Channels/ Current
I_{CaT}	: T-type Ca Channels /Current
ICD	: Implantable Cardioverter-Defibrillator
I_f	: Funny current
IHD	: Ischemic heart disease
IJV	: Internal jugular vein
I_k	: Delayed Rectifier Potassium Current
I_{KI}	: Background Potassium Current
I_{kr}	: Rapid Potassium channels/current
I_{ks}	: Slow potassium channels/current
I_{kur}	: Ultra-rapid potassium channels/current
I_{Na}	: Sodium current

I_{TI}	: Transient Inward Current
I_{to}	: Transient outward current
IV	: IntraVenous
K⁺	: Potassium
LAFB	: Left Anterior Fascicular Block
LBBB	: Left bundle branch block
LMA	: Laryngeal mask airway
LPFB	: Left posterior fascicular block
LQT	: Long QT interval
LQTS	: Long QT Syndrome
LV	: Left ventricle
MAT	: Multifocal Atrial Tachycardia
MI	: Myocardial infarction
N₂O	: Nitrous oxide
Na⁺	: Sodium
NCX	: Sodium Calcium Exchanger
NE	: Epinephrine
OR	: Operation Room
OSA	: Obstructive sleep apnea
PAC	: Premature atrial contraction
PaCO₂	: CO ₂ tension
PACs	: Premature atrial complexes
PCS	: Peripheral conduction system
PEA	: Pulseless electrical activity
PEM	: Protein energy malnutrition
PSVT	: Paroxysmal supraventricular tachycardia
PVCs	: Premature Ventricular complexes

RBBB	: Right bundle branch block
RF	: Radiofrequency
RMP	: Resting membrane potential
ROSC	: Return of spontaneous circulation
RV	: Right ventricle
SA	: Sinoatrial
SAN	: Sinoatrial node
SCN5A	: sodium channel, voltage-gated, type V, alpha subunit
SVR	: systemic vascular resistance
TdP	: Torsade de pointes
TEE	: Trans-Esophageal Echocardiography
VF	: Ventricular fibrillation
VT	: Ventricular tachycardia
WPW	: Wolf Parkinson White syndrome

Introduction & Aim of work

Introduction

Life threatening cardiovascular events under anesthesia is uncommon. However, adverse cardiovascular events occurring during and after the emergence of anesthesia occur more frequently. Although the incidence is higher during cardiac surgery, intra-operative dysrhythmias affect up to 29% of patients undergoing non-cardiac surgery. Relatively minor fluctuations in cardiovascular and hemodynamic parameters due to Arrhythmias can have significant long-term implications for example, post-operative atrial fibrillation is associated with a 2-3 fold increase in stroke risk, as well as a higher incidence of myocardial infarction, congestive heart failure, ventricular dysrhythmias and renal failure (*Valchanov et al., 2011*).

The incidence of intra-operative cardiac dysrhythmias depends on the definition (benign versus life threatening), patient characteristics and the type of surgery (frequent incidence during cardiothoracic surgery (*Miller and Pardo, 2011*)).

Cardiac dysrhythmias are an important cause of complications throughout the perioperative period. Although our understanding of arrhythmias has increased considerably in recent years, they remain a source of concern for anesthesiologist (*Garcia, 2006*).

In the normal human heart, each beat originates in the SA node (specialized tissue in the right atrium) resulting in a regular normal sinus rhythm (*Ganong, 2005*).

Arrhythmia or Dysrhythmia is defined as “Abnormality of cardiac rate, rhythm or conduction which can be either lethal (sudden cardiac death) or symptomatic (syncope, near syncope, dizziness or palpitations) or asymptomatic”. Immediate diagnosis and intervention by the anesthesiologist will prevent degeneration of an arrhythmia into a life-threatening event (*Dua and Kumra, 2007*).

Ion channels provide the molecular basis for cardiac electrical activity. These channels have specific ion selectivity and are responsible for the precise and timely regulation of the passage of charged ions across the cell membrane in cardiac cells. Impairment in the flow of these ions predisposes to cardiac arrhythmias (*Farwell and Gollob, 2007*).

The ion channels are classified into three classes (based on the cation they conduct) sodium, calcium and potassium channels (*Thompson and Balser, 2004*).

Arrhythmias can be classified by the heart rate into tachyarrhythmias and bradyarrhythmias. Arrhythmias can also be classified based on where they arise from as either ventricular (within the ventricles) or supraventricular (anywhere above the
