MODELING AND ANALYSIS OF A GRID CONNECTED INDUCTION GENERATOR USING AC VOLTAGE CONTROLLER

By

Haytham Gamal Mohammed Mostafa

A Thesis Submitted to the
Faculty of Engineering at Cairo University
In Partial fulfillment of the
Requirements for the Degree of
MASTER OF SCIENCE
IN
Electrical Engineering

Under the Supervision of

Prof.Dr.M.M. Abdel –Aziz
Elec.Power and Machines
Cairo University

Prof.Dr.M.A. Abdel –Halim
Elec.Power and Machines

Abstract XIV

Chapter I

Introduction

1.1 Control of Induction Generator 1

1.2 Previous Work 3

1.3 Thesis Objectives 5

1.4 Thesis Organization 5

Chapter II

Modeling

2.1 Modeling of the Induction Generator System 7

2.2 Solid State Control of the Induction Generator 11

2.2.1 Control using naturally commutated AC voltage controller 11

2.2.2 Control using a forced commutated AC voltage controller 13

a) Firing angle control 13

b) Extinction angle control 13

c) Symmetrical angle control 13

2.2.3 Control using AC chopper 16

2.3 Performance Characteristic Variables and Indices of the Grid Connected Induction Generator 20

a) The current 20

b) The total harmonic distortion factor 21

c) The distortion factor 22

d) The active power 22

e) The reactive power 22

f) The displacement angle 23

g) The power factor 23

h) The average electrical torque 23

i) The torque ripples 23

j) The efficiency 26

Chapter III

Computer Simulation and Results

3.1 Control Using a Naturally Commutated AC Voltage Controller 27

1) Fundamental current characteristics 35

2) Total harmonic distortion factor characteristics 35

3) Individual harmonic contents 35

4) Active power characteristics 40

5) Reactive power characteristics 40

6) Displacement angle characteristics 40

7) Power factor characteristics 41

8) Average torque characteristics 41

9) Total torque ripple characteristics 41

10) Pulsating torque component characteristics 41

11) Efficiency characteristics 43

3.2 Control Using a Transistorized AC Voltage Controller 51

3.2.1 Firing angle control strategy 59

1) Fundamental current characteristics 59

2) Total harmonic distortion factor characteristics 61

3) Individual harmonic contents 61

4) Active power characteristics 66

5) Reactive power characteristics 66

6) Displacement angle characteristics 66

7) Power factor characteristics 67

8) Average torque characteristics 67

9) Total torque ripple characteristics 67

10) Pulsating torque component characteristics 67

11) Efficiency characteristics 69

3.2.2 Extinction angle control strategy 77

1) Fundamental current characteristics 77

2) Total harmonic distortion factor characteristics 79

3) Individual harmonic contents 79

4) Active power characteristics 85

5) Reactive power characteristics 85

6) Displacement angle characteristics 85

7) Power factor characteristics 86

8) Average torque characteristics 86

9) Total torque ripple characteristics 86

10) Pulsating torque component characteristics 86

11) Efficiency characteristics 88

3.2.3 Symmetrical angle control strategy 96

1) Fundamental current characteristics 96

2) Total harmonic distortion factor characteristics 98

3) Individual harmonic contents 98

4) Active power characteristics 104

5) Reactive power characteristics 104

6) Displacement angle characteristics 104

7) Power factor characteristics 104

8) Average torque characteristics 105

9) Total torque ripple characteristics 105

10) Pulsating torque component characteristics 105

11) Efficiency characteristics 107

3.3 Control Using A.C Chopper 115

1) Fundamental current characteristics 121

2) Total harmonic distortion factor characteristics 121

3) Individual harmonic contents 122

4) Active power characteristics 129

5) Reactive power characteristics 129

6) Displacement angle characteristics 129

7) Power factor characteristics 129

8) Average torque characteristics 129

9) Total torque ripple characteristics 130

10) Pulsating torque component characteristics 130

11) Efficiency characteristics 131

12) Inrush current 138

3.4 Comparison with Other Control Strategies 144

1) Total harmonic distortion factor characteristics 144

2) Individual harmonic contents 145

3) Displacement angle characteristics 146

4) Power factor characteristics 146

5) Efficiency characteristics 146

6) Pulsating torque component characteristics 147

Chapter V

Conclusion and Recommendation

4.1 Conclusion 148

4.2 Recommendation for Future Work 150
