

**Evaluation of Electrocardiographic Changes
and Some Laboratory Investigations as
Predictors of Prognosis of Acute Organo-
phosphorous Intoxicated Patients**

Thesis Submitted

For Partial Fulfillment of Master Degree
in Clinical Toxicology

By

Eman Abd El-Fatah Mohammed

M.B.B.Ch

*Demonstrator in Forensic Medicine and Clinical Toxicology department
Faculty of Medicine - Ain Shams University*

Under Supervision of

Prof. Dr. Suzan Mostafa Mahmmoud

*Professor of Forensic Medicine and Clinical Toxicology
Faculty of Medicine - Ain Shams University*

Prof. Dr. Enas Abul-Wafa El-Taftazani

*Professor of Forensic Medicine and Clinical Toxicology
Faculty of Medicine - Ain Shams University*

Dr. Heba Mohammed Mohammed Halawa

*Lecturer of Forensic Medicine and Clinical Toxicology
Faculty of Medicine - Ain Shams University*

**Faculty of Medicine
Ain Shams University
2007**

تقييم رسم القلب الكهربى و بعض الفحوص المعملية
كمتنبئات بالمسار المرضى لحالات التسمم الحاد
بالمبيدات الحشرية الفسفورية العضوية

رسالة
مقدمة توطئة للحصول على درجة الماجستير
فى السموم الاكلينيكية

مقدمه من
الطبيبة / ايمان عبد الفتاح محمد
بكالوريوس الطب و الجراحة العامة
معيدة بقسم الطب الشرعي و السموم الاكلينيكية
كلية الطب - جامعة عين شمس

تحت اشراف
الأستاذة الدكتورة/ سوزان مصطفى محمود
أستاذ الطب الشرعي والسموم الاكلينيكية
كلية الطب - جامعة عين شمس

الأستاذة الدكتورة / إيناس أبو الوفا التفتازانى
أستاذ الطب الشرعي والسموم الاكلينيكية
كلية الطب - جامعة عين شمس

الدكتورة/ هبه محمد محمد حلاوة
مدرس الطب الشرعي والسموم الاكلينيكية
كلية الطب - جامعة عين شمس

كلية الطب
جامعة عين شمس
2007

Acknowledgment

First and for most, I feel always indebted to Allah the kind and merciful.

*I wish to express my sincere thanks and appreciation to **Prof. Dr. Suzan Mostafa Mahmoud**, Professor of Forensic Medicine and Clinical Toxicology, Faculty of Medicine, Ain Shams University, for her sincere directions, meticulous supervision, continuous advice and constant encouragement. This thesis owes a great deal to her guidance and careful comments.*

*My deepest gratitude and appreciation to **Prof. Dr. Enas Abul-Wafa EL Taftazani**, Professor of Forensic Medicine and Clinical Toxicology, Faculty of Medicine, Ain Shams University, for her great effort, continuous encouragement, kind guidance and support throughout this work. She has generously devoted much of her time and effort for supervision of this study.*

*I am deeply grateful for **Dr. Heba Mohammed Mohammed Halawa**, Lecturer of Forensic Medicine and Clinical Toxicology, Faculty of Medicine, Ain Shams University, for her great help, meticulous supervision, valuable guidance and continuous support*

*I would like to express my sincere thanks and appreciation to **Prof. Dr. Hani A. Gamalulddin**, Professor and Head of Forensic Medicine and Clinical Toxicology Department, Faculty of Medicine, Ain Shams University and director of PCC for his continuous support, constant encouragement unlimited help and fruitful guidance.*

*I am also grateful to **all My Professors and Colleagues** in the Forensic Medicine and Clinical Toxicology Department, Faculty of Medicine, Ain Shams University, and **Staff members of the Poison Control Centre** for their cooperation and help.*

*Last but not least, I want to thank **All members of my family** for their real help and reassurance as without their help, this work could not have been completed.*

Eman Abd El Fatah Mohammed

بِسْمِ اللَّهِ الرَّحْمَنِ الرَّحِيمِ

(وَعَلَّمَكَ مَا لَمْ تَكُنْ
تَعْلَمُ وَكَانَ فَضْلُ اللَّهِ
عَلَيْكَ عَظِيمًا)

صدق الله العظيم
سورة النساء آية (113)

List of Tables

Tables. No.	Page No.
1. Reed's classification of the level of consciousness.....	79
2. Sociodemographic criteria (age, sex, residence and occupation) of the selected 60 patients with acute organophosphate poisoning.....	94
3. Types of OP insecticide and their mode and route of intoxication in the selected 60 patients with organophosphate poisoning.....	98
4. ANOVA one-way statistical analysis of vital data [temperature, pulse, blood pressure (BP) and respiratory rate]in the studied groups, group A (control group n=10), group B (moderate group n=30) and group C (severe group n=30)	102
5. Incidence of general manifestations (temperature, skin, and pupil size) in the selected 60 patients with acute OP poisoning	106
6. Incidence of respiratory and cardiovascular manifestations in the selected 60 patients with acute organophosphate poisoning.....	107
7. The incidence of other systems manifestations (neurological gastrointestinal, urinary manifestations, as well as relapse) in the selected 60 patients with acute OP poisoning.....	109
8. ANOVA one-way statistical analysis of arterial blood gas values (pH, PaO ₂ , PaCO ₂ , SaO ₂ and HCO ₃) in the studied groups, group A (control group n=10),	

group B (moderate group n=30) and group C (severe group n=30)	111
9. ANOVA one-way statistical analysis of biochemical parameters (serum sodium, potassium, amylase, lipase, BUN and creatinine) in the studied groups, group A (control group n=10), group B (moderate group n=30) and group C (severe group n=30)	114
10. ANOVA one-way statistical analysis of pseudocholinesterase (PChE) level in the studied groups, group A (control group n=10), group B (moderate group n=30) and group C (severe group n=30)	117
11. Incidence of chest X –ray findings in the selected 60 patients with acute organophosphate poisoning	119
12. ANOVA one-way statistical analysis studying the relation between respiratory failure and some clinical variables (atropine dosage, oxime dosage, pseudocholinesterase level, plasma amylase level, QTc interval and hospitalization days) in the selected 60 patients with acute OP intoxication	124
13. Chi-Square Test statistical analysis studying the relation between respiratory failure and some clinical variables (sweating, excessive salivation, tachypnea, bradypnea, creipitations, wheezes, pneumonia bradycardia, tachycardia, hypertension, hypotension, fasciculations, weakness, convulsions, coma, and PVCs) in the selected 60 patients with acute OP intoxication	128
14. ANOVA one-way statistical analysis of electrocardiographic (ECG) findings (P-R interval and Q-Tc Interval) in the studied groups, group A (control	

group n=10), group B (moderate group n=30) and group C (severe group n=30)	135
15. Incidence of ECG changes in the selected 60 patients with acute organophosphate poisoning	137
16. Chi-Square Test for statistical analysis studying the relation between ECG changes and the outcome in the selected 60 patients with acute organophosphate poisoning.....	141
17. Chi-Square Test statistical analysis studying the relation between cardiotoxicity and its predisposing factors (hypoxia, acidosis and electrolyte abnormalities) in the selected 60 patients with acute organophosphate poisoning.....	144
18. ANOVA one-way statistical analysis studying relation between serum BUN and relapse in the selected 60 patients with acute organophosphate poisoning	147
19. Survival pattern in the selected 60 patients with acute OP intoxication and causes of death in the 10 fatality cases	149
20. Chi-Square Test in the selected 60 patients with organophosphate poisoning comparing the frequency of occurrence of complications with patient's survival	151
21. Chi-Square Test for statistical analysis of the relation between ICU admissions, need of MV and the outcome in the selected 60 patients with acute organophosphate poisoning.....	154
22. The FiO ₂ (Fraction of inspired oxygen) requirement of both survivor and survivor patients with mechanical ventilation (MV).....	156

23. ANOVA one-way statistical analysis studying the relation between FiO ₂ requirement and the outcome in the mechanically ventilated patients.....	158
--	-----

List of Histograms

Histogram. No.	Page No.
1. Age distribution in the selected 60 patients with acute organophosphate poisoning	96
2. Sex distribution in the selected 60 patients with acute organophosphate poisoning	96
3. Residence distribution pattern in the selected 60 patients with acute organophosphate poisoning	97
4. Occupational distribution in the selected 60 patients with acute organophosphate poisoning	97
5. Types of OPC involved in toxicity in the selected 60 patients with acute organophosphate poisoning	100
6. Mode of poisoning in the selected 60 patients with acute organophosphate poisoning	100
7. Route of intoxication in the selected 60 patients with acute organophosphate poisoning	101
8. Mean body temperature in the studied groups	104
9. Mean pulse (heart rate) in the studied groups	104
10. Mean systolic and diastolic blood pressure (BP) in the studied groups	105
11. Mean respiratory rate (RR) in the studied groups	105
12. The mean Arterial Blood Gases (ABGs) values in the studied groups	113
13. The mean values of biochemical parameters in the studied groups	116

14. The mean pseudocholinesterase (PChE) level in the studied groups	118
15. Incidence of chest X –ray findings in the selected 60 patients with acute organophosphate poisoning	120
16. Relation of atropine and oxime dosage with respiratory failure in the selected 60 patients with acute OP intoxication	126
17. Relation of pseudocholinesterase (PChE) and serum amylase (AML) level with respiratory failure in the selected 60 patients with acute OP intoxication	126
18. Relation of QT corrected interval (QTc) with respiratory failure in the selected 60 patients with acute OP intoxication	127
19. Relation of hospitalization days with respiratory failure in the selected 60 patients with acute OP intoxication	127
20. Comparison of some clinical variables (sweating and excessive salivation) between patients with respiratory failure and patients without respiratory failure in the selected 60 patients with acute OP intoxication	132
21. Comparison of some clinical variables (respiratory manifestations in the form of tachypnea, bradypnea, crepitations, wheezes, pneumonia) between patients with respiratory failure and patients without respiratory failure	132
22. Comparison of some clinical variables (cardiovascular manifestations in the form of bradycardia, tachycardia, hypertension and	

hypotension) between patients with respiratory failure and patients without respiratory failure.....	133
23. Comparison of some clinical variables (neurological manifestations in the form of fasciculation, weakness, coma and convulsions) between patients with respiratory failure and patients without respiratory failure.....	133
24. The relation between the presence of premature ventricular contractions and respiratory failure in the selected 60 patients with acute OP intoxication	134
25. The mean QTc and P-R intervals in the studied groups	136
26. Frequency of ECG changes in the selected 60 patients with OP poisoning.	137
27. Relation between ECG changes and the patients' survival in the selected 60 patients with acute organophosphate poisoning.....	143
28. Hypoxia, acidosis and electrolyte abnormalities (serum Na and K) in the selected 60 patients with acute OP intoxication in relation to cardiotoxicity	146
29. Relation between blood urea nitrogen (BUN) and relapse.....	148
30. Relation between occurrence of complication and the patients' survival in the selected 60 patients with acute organophosphate poisoning	153
31. The relation between ICU admission, need of MV and the outcome in the selected 60 patients with acute organophosphate poisoning	155

32. FiO ₂ requirement of both non survivor and survivor patients with mechanical ventilation (MV)	157
33. The relation between FiO ₂ requirement and the outcome in the mechanically ventilated patients	159

List of Figures

Fig. No.	Page No.
1. General chemical structure of organophosphorous compound	9
2. Chemical formulae of common organophosphate insecticides.....	10
3. Chemical formulae of common organophosphate nerve agents	11
4. Impulse transmission at the cholinergic synapse	12
5. A: schematic diagram representing the normal action of the enzyme (AChE). B: Schematic representing the action of organophosphorous compounds on AChE	13
6. Chest x-ray showing upper right lobar pneumonia.....	121
7. Chest x-ray showing lower right lobar pneumonia.....	121
8. Chest x-ray showing right and left lobar pneumonia	122
9. Chest x-ray showing bronchopneumonia	122
10. Chest x-ray showing non-cardiogenic pulmonary edema.....	123
11. Within normal ECG findings	139
12. ECG showing sinus bradycardia	139
13. ECG showing sinus tachycardia.....	139
