

**CONTEMPORARY TECHNOLOGY AND ITS IMPACT ON  
MODERN INTERIOR ARCHITECTURE FINISHING  
MATERIALS IN LOCAL ENVIRONEMNT**

**Submitted By**

**Fahim Magued Fahim Iscandar**

B.Sc. of (Interior Architecture), Faculty of Fine Arts, Helwan University, 1998

Master of (Interior Architecture), Faculty of Fine Arts, Helwan University, 2005

A thesis submitted in Partial Fulfillment  
Of  
The Requirement for the Doctor of Philosophy Degree  
In  
Environmental Science  
Department of Environmental Engineering Science

Under The Supervision of:

**1- Prof. Dr. Magda Ekram Ebid**

Prof. of Architecture & Vice Dean of Institute of Environemntal  
Studies & Research for Environemnt & Community  
Ain Shams University

**2- Prof. Dr. Maha Mohamed Farid Abdel Khalek**

Prof. of Interior Architecture, Décor Department  
Faculty of Engineering  
Helwan University

**2013**

**CONTEMPORARY TECHNOLOGY AND ITS IMPACT ON  
MODERN INTERIOR ARCHITECTURE FINISHING  
MATERIALS IN LOCAL ENVIRONEMNT**

**Submitted By**

**Fahim Magued Fahim Iscandar**

<b>Introduction</b>			<b>1</b>
Problem identification			3
Research objectives			4
Research methodology			6
Research structure			7
<b>Part I: Theoretical Studies</b>			
<b>Chapter 1: Impact of Contemporary Technology and Globalization on Architecture and Interior Architecture</b>			
<b>1. Contemporary Technology</b>			<b>8</b>
<b>1.1.</b>	<b>Technology, architecture and interior design interrelationship</b>		<b>10</b>
1.1.1.	Historical background		11
	1.1.1.1.	The period 1880–1920	11
	1.1.1.2.	The period 1920–60	12
	1.1.1.3.	The period 1960–2000, Post-modernism and after	16
	1.1.1.4.	The 21 <sup>st</sup> century the new millennium	22
	1.1.2.	Impact of Materials on Architecture and Interior design	25
	1.1.2.1.	Materials for building and finishing	27
	1.1.3.	Identity and Localization	33
<b>1.2.</b>	<b>Technology, sustainability and environment</b>		<b>35</b>
	1.2.1.	Sustainability in architecture	35
	1.2.2.	Incorporating environmental and sustainability concerns into building design and construction.	37
	1.2.3.	Environmental concerns	38
	1.2.4.	Technology, environment, and Human being	40
<b>1.3.</b>	<b>New architectural movements and approaches: Friendly Environment Architecture</b>		<b>42</b>
	1.3.1.	Green architecture	42
	1.3.1.1.	Defining green design	42
	1.3.1.2.	Understanding green buildings	43
	1.3.1.3.	Green building materials	45
	1.3.2.	Bio-climatic architecture	46
	1.3.2.1.	Passive solar heating	48
	1.3.2.2.	Natural cooling	49
	1.3.2.3.	Day lighting	49
	1.3.3.	Energy efficient buildings and energy conservation	51

<b>1.4. Indoor environmental problems – quality</b>	52
1.4.1. Indoor Air Quality (IAQ) problems	52
1.4.1.1 Factors contributing to (IAQ)	53
1.4.1.2. Inadequate and poor indoor air quality	55
1.4.1.3. Indoor air pollution (Radon)	56
1.4.1.4. Principles of indoor air quality design	57
1.4.2. Noise pollution – noise control	59
1.4.3. Electromagnetic waves-electro stress	60
1.4.3.1. Characteristics of electric fields and magnetic fields	61
1.4.3.2. Exposure levels of electric fields and magnetic fields	61
1.4.3.3. Guidelines to reduce EMF exposure in interior spaces	62
<b>Chapter 2: Finishing Materials and its Impact on Interior Design</b>	
<b>Finishing Materials</b>	63
<b>2.1. Evolution of finishing materials (traditional and new)</b>	68
2.1.1. Types of materials	68
2.1.1.1. Natural materials	69
2.1.1.2. Processed materials	69
2.1.1.3. Synthetic materials	70
2.1.2. Architecture materials classification	70
2.1.2.1. Engineering classifications	70
2.1.2.2. Material classification as building components	70
2.1.3. Materials Life Cycle: Phases of Building Materials	72
2.1.3.1. The Pre-Building Phase	72
2.1.3.2. The Building Phase	73
2.1.3.3. The Post-Building Phase	74
2.1.4. Interior Finishing materials and surfaces	77
2.1.4.1. Gypsum Products	77
2.1.4.2. Engineered or Composite Wood or Plastic Panels	77
2.1.4.3. High-Pressure Laminates	79
2.1.4.4. Ceramics and Terrazzo	79
2.1.4.5. Wood Flooring	80
2.1.4.6. Resilient Floorings	82
2.1.4.7. Carpets and under pads	82
2.1.4.8. Finished Concrete Flooring	84
2.1.4.9. Paints	84
2.1.4.10. Ceiling Tile	85
2.1.5. Innovative materials	86
2.1.6. Materials, technologies and environment relationship	87
<b>2.2. Nanotechnology and its impact on finishing materials</b>	87
2.2.1. Nanomaterials (Nanotechnology) introduction	87

	2.2.2.	History of Nanotechnology		90
	2.2.3.	Fundamental concepts of Nanoscience		92
	2.2.4.	Environment and Nanotechnology		92
	2.2.5.	Energy applications of nanotechnology		93
		2.2.5.1.	Reduction of energy consumption	93
		2.2.5.2.	Increasing the efficiency of energy production	94
		2.2.5.3.	The use of more environmentally friendly energy systems	94
	2.2.6.	Environmental Benefit of Nanotechnology		95
	2.2.7.	Nanotechnology in architecture and construction materials Characteristics and properties of Nanotechnology new materials:		96
		2.2.7.1.	Super-Strong Structures	99
		2.2.7.2.	Fire-proofing	100
		2.2.7.3.	Self-Cleaning Coatings	102
		2.2.7.4.	Easy-to-clean (ETC)	106
		2.2.7.5.	Tough Glass	107
		2.2.7.6.	Anti-Graffiti	107
		2.2.7.7.	Anti-Fogging coating	107
		2.2.7.8.	Air Purification (indoor and outdoor)	108
		2.2.7.9.	Thermal insulation, Temperature Regulation, UV protection and Solar Gain Protection	108
	2.2.8	Nanotechnology disadvantages		109
<b>Part II: Analytical Comparative Studies</b>				
<b>Chapter 3: Evaluating Methodologies for Finishing Materials</b>				
<b>3. Development of Evaluation Methodology:</b>				111
<b>3.1. Rating Systems:</b>				112
	3.1.1.	Defining rating systems		113
	3.1.2.	Types of rating systems		114
	3.1.3.	Basic structure for any rating system		114
		3.1.3.1.	Environmental criteria	115
		3.1.3.2.	Scores	115
		3.1.3.3.	Weightings	115
		3.1.3.4.	Rating	115
<b>3.2. International Assessing Methodologies for the sustainability of buildings:</b>				116
	3.2.1	BREEAM (UK)		116
		3.2.1.1.	The BREEAM approach	117
		3.2.1.2.	BREEAM framework	118
		3.2.1.3.	BREEAM Assessment for credits	119
		3.2.1.4.	BREEAM Environmental weightings	120
	3.2.2.	LEED (US)		121
		3.2.2.1.	LEED approach	122
		3.2.2.2.	LEED framework	123

		3.2.2.3.	LEED Assessment credits	125
		3.2.2.4.	LEED Environmental weightings	126
		3.2.2.5.	LEED Certification process	126
		3.2.2.6.	The green building market and LEED	127
	3.2.3.	GREEN STAR (AUSTRALIA):		127
		3.2.3.1.	Green Star approach	127
		3.2.3.2.	Green Star framework	128
		3.2.3.3.	Green Star Assessment credits	129
		3.2.3.4.	Green Star Environmental weightings	130
		3.2.3.5.	Green Star Certification process	131
		3.2.3.6.	Green Star and The green building market	132
	3.2.4.	Rating systems limitations and potentials		132
		3.2.4.1.	Rating systems limitations	132
		3.2.4.2.	Rating systems potentials	133
	3.2.5.	Rating systems Timeline and comparative analysis:		134
<b>3.3. Regional Assessing Methodologies for the sustainability of buildings:</b>				136
	3.3.1.	Rating System for Estidama: (Estidama The Pearl Building Approach)		136
	3.3.2.	The Pearl Rating System (Estidama) framework		137
	3.3.3.	Assessment credits for the Pearl Rating System (Estidama)		139
	3.3.4.	The Pearl Rating System (Estidama) Environmental weightings		139
<b>3.4. Local Assessing Methodologies for the sustainability of buildings:</b>				141
	3.4.1.	Egyptian Green Building Council Organization		141
		3.4.1.1.	The Egyptian Green Building Council objectives	142
	3.4.2.	National Green Building Rating System (The Egyptian Green Pyramid)		142
		3.4.2.1.	Reasons for choosing Green Pyramid as a name for the national Rating System	144
		3.4.2.2.	Aims of the Egyptian Green Pyramid Rating System	144
		3.4.2.3.	The Egyptian Green Pyramid Rating System approaches.	145
		3.4.2.4.	Advantages of the Egyptian Green Pyramid Rating System	146
		3.4.2.5.	Components of the Egyptian Green Pyramid Rating System	147
		3.4.2.6.	Green Pyramid category weightings	148
		3.4.2.7.	Green Pyramid Certification and levels of rating	148
		3.4.2.8.	The Egyptian Green Pyramid Rating System process	149
		3.4.2.9.	The Egyptian Green Pyramid Rating System:	150

		Assessment and rating	
	3.4.2.10	Forms for use in the Green pyramid rating Approval process	153
	3.4.3.	The Egyptian Green Building Council efforts and project	154
	3.4.3.1.	The Eco-villages National Project The Eco-villages National Project goals	154
	3.4.3.2.	Affordable Green housing in Egypt. National Affordable Non-Conventional Housing Project	155
	<b>3.5. Labeling Systems:</b>		156
	3.5.1.	Eco-labeling Objectives:	156
	3.5.1.1.	Benefits of Eco-labeling for Producers of Products and Services	157
	3.5.1.2.	Benefits of Eco-labeling for Consumers	158
	3.5.2.	Eco-labeling World-Wide	159
	3.5.2.1.	Aims of the Global Eco-labeling Network	160
	3.5.2.2.	Defining Eco-labeling	161
	3.5.3.	National eco-labeling systems - The Nordic Swan Eco-label	162
	3.5.3.1.	The Nordic Swan Eco-label and the Development of new product categories	163
	3.5.3.2.	The Nordic Swan Eco-label preliminary studies	163
	3.5.3.3.	Application and label use of The Nordic Swan Eco-label	164
	3.5.4.	The Supra-regional Eco-labeling systems -The European Eco- label	165
	3.5.4.1.	Advantages of the European Eco-label	166
	3.5.4.2.	The European Eco-label Award Scheme	167
	3.5.4.3.	The Main Elements of the European Eco-label Scheme	168
	3.5.4.4.	European Eco-label Products groups	169
	3.5.4.5.	Life-Cycle Assessment (LCA) can be description	170
	3.5.4.6.	European Eco-label established products groups	172
	<b><u>Chapter 4:</u> Contemporary Case Studies, International Regional and Local Examples</b>		
	<b>4. Contemporary Case studies</b>		174
	<b>4.1. Contemporary International Case study: The City Center Las Vegas, Nevada</b>		176
	4.1.1.	Criteria of selection for the case study	176
	4.1.2.	Project definition & goal setting	176
	4.1.3	Team building roles & responsibility	177
	4.1.4	Project certification	177
	4.1.5	Project review & Design concept	178
	4.1.5.1	ARIA Resort & Casino	179

		4.1.5.2	Mandarin Oriental hotel	183
		4.1.5.3	Vdara Hotel & Spa	185
		4.1.5.4	Veer Towers	188
		4.1.5.5	Crystals retail and entertainment district	191
	4.1.6.		Sustainable and environmental strategies	194
		4.1.6.1	Energy strategies	194
		4.1.6.2	Water strategies	195
		4.1.6.3	Wellness strategies	196
		4.1.6.4	Recycling strategies	197
		4.1.6.5	Materials strategies	198
		4.1.6.6	Transportation sustainable strategies	199
		4.1.6.7	Transformation sustainable strategies	200
		<b>4.2. Contemporary Regional Case Study 1: Bahrain World Trade Center</b>		202
	4.2.1		Criteria of selection for the case study	202
	4.2.2		Project definition & goal setting	202
	4.2.3		Team building roles & responsibility	203
	4.2.4		Project certification	203
	4.2.5		Project review & Design concept	204
	4.2.6		Sustainable and environmental strategies	206
		<b>4.3. Contemporary Regional Case Study 2: (Burj Khalifa Dubai)</b>		207
	4.3.1		Criteria of selection for the case study	207
	4.3.2		Project definition & goal setting	208
	4.3.3		Team building roles & responsibility	209
	4.3.4		Project certification	211
	4.3.5		Project review & Design concept	212
	4.3.6		Sustainable and environmental strategies	215
		<b>4.4. Contemporary Local Case study 1: (Lafarge head office, New Cairo, Egypt)</b>		218
	4.4.1		Criteria of selection for the case study	218
	4.4.2		Project definition & goal setting	218
	4.4.3		Team building roles & responsibility	219
	4.4.4		Project certification	219
	4.4.5		Project review & Design concept	219
	4.4.6		Sustainable and environmental strategies	222
		<b>4.5. Contemporary Local Case study 2: HSBC Smart Village business park, Cairo, Egypt</b>		224
	4.5.1		Criteria of selection for the case study	224
	4.5.2		Project definition & goal setting	224
	4.5.3		Team building roles & responsibility	225
	4.5.4		Project certification	225
	4.5.5		Project review & Design concept	225
	4.5.6		Sustainable and environmental strategies	225
		<b>4.6. Contemporary Local Case study 3: El Gouna Hurgada Egypt</b>		226

	4.6.1	Criteria of selection for the case study	227
	4.6.2	Project definition & goal setting	227
	4.6.3	Team building roles & responsibility	228
	4.6.4	Project certification	229
	4.6.5	Project review & Design concept	229
	4.6.6	Sustainable and environmental strategies	231
<b>4.7.</b>		<b>Case Studies Comparative Analysis tables.</b>	232
<b>Part III: Applicable Studies</b>			
<b>Chapter 5: Integrating sustainability Into Interior designs: Local rating tool for sustainable interior finishing materials and products.</b>			
<b>5.</b>		<b>Local Rating Tool</b>	243
<b>5.1.</b>		<b>The need for a local rating tool for sustainable interior finishing materials</b>	244
	5.1.1	The important need for a local rating tool for sustainable interior finishing materials	246
<b>5.2.</b>		<b>International Assessing Methodologies and Rating Systems for the sustainability of interior of buildings</b>	247
	5.2.1	The U.S. green Building Council efforts in green Building Rating System for interiors	247
		5.2.1.1 LEED for Commercial Interiors	248
		5.2.1.2 LEED for Commercial Interiors considered the green benchmark for the tenant improvement market.	250
		5.2.1.3 Prerequisites and credits in the LEED 2009 for Commercial Interiors Rating System	252
	5.2.2	Effort of The Green Building Council of Australia for rating interiors	253
		5.2.2.1 Green Star initiatives and activities	253
		5.2.2.2 The Green Star for Interiors	255
		5.2.2.3 The Green Star- Interiors credits	256
<b>5.3.</b>		<b>Local sustainable interior finishing materials and products rating tool</b>	258
	5.3.1	Concepts for environmental evaluation	259
		5.3.1.1 Life cycle thinking (LCT) concept	259
		5.3.1.2 Life cycle management (LCM)	259
		5.3.1.3 Design for environment	259
		5.3.1.4 Cleaner technology	259
		5.3.1.5 Dematerialization	260
		5.3.1.6 Eco-efficiency	260
		5.3.1.7 Industrial ecology	260
		5.3.1.8 End-of-Life (EOL) management	261
	5.3.2	Tools for environmental evaluation	261
		5.3.2.1 Analytical environmental tools	261
		5.3.2.2 Operational environmental tools	262

	5.3.3	Criteria for the evaluation and selection of rating systems		264
		5.3.3.1	Measurability	264
		5.3.3.2	Applicability	264
		5.3.3.3	Availability	264
		5.3.3.4	Development	264
		5.3.3.5	Usability	264
		5.3.3.6	System’s maturity	264
		5.3.3.7	Technical content	264
		5.3.3.8	Communicability	265
<b>5.4. Suggesting a strategy for an Egyptian Rating Tool for interior finishing materials and products</b>				<b>265</b>
	5.4.1	Framework for the suggested Egyptian Rating Tool for Interior Finishing materials and products.		266
	5.4.2	Rating Categories		267
	5.4.3	Format and layout of each Categories		268
	5.4.4	Category Score sheet design		269
	5.4.5	Categories of the Local Rating Tool for Interior Finishing products and Materials		270
		5.4.5.1	Category 1: Managing interior finishing process (construction & demolition).	270
			Objectives and Strategies of Category (1)	271
		5.4.5.2	Category 2: Walls and ceilings treatments and covering.	283
			Objectives and Strategies of Category (2)	283
		5.4.5.3	Category 3: Floor coverings and finishes.	293
			Strategies and Objectives of Category (3)	293
		5.4.5.4	Category 4: Furniture.	301
			Objectives and strategies of Category (4)	302
		5.4.5.5	Category 5: Openings: doors and windows	308
			Objectives and Strategies of Category (5)	309
			Strategies to consider for enhancing the performance of existing openings	310
		5.4.5.6	Category 6: Indoor water conservation and plumbing fixtures	319
			Objectives and Strategies of Category (6)	319
		5.4.5.7	Category 7: Energy efficiency (Electricity, Lighting, appliances, HVAC & electrical automated systems)	325
			Objectives and strategies of the Category	326
		5.4.5.8	Category 8: Local and regional interior finishing materials and products	341
		5.4.5.9	Category 9: New technologies and traditions	345
			Objectives and strategies of the Category	346
		5.4.5.10	Category 10: Operation and maintenance	350

		strategies for interior space	
	5.4.6.	Conclusion for the suggested local rating tool for interior finishing materials	356
<b>Conclusion and Recommendations:</b>			
	Conclusions		358
	Results		362
	Recommendations		363

## Lists of Tables

Table No.	Title	Page
<b>Chapter 2</b>		
2.1	Classification of building materials	64
2.2	Basic materials for interiors and their use either structural or nonstructural.	75-76
<b>Chapter 3</b>		
3.1	BREEAM rating scores	119
3.2	Weighting factors in BREEAM	120
3.3	The aspects of LEED with intended results	122
3.4	LEED rating scores	124
3.5	The category of "Sustainable sites" in LEED	125
3.6	LEED points and implicit weightings	126
3.7	Green Star Rating scores	130
3.8	Green Star average weighting factors	132
3.9	The comparative analysis between rating systems	135
3.10	Example of Green Pyramid Rating calculation	152
<b>Chapter 4</b>		
4.0	Contemporary Case Studies Project review & sustainable Design concept table	175
4.1	Contemporary International Case study The City Center Las Vegas - Aria	233
4.2	Contemporary International Case study The City Center Las Vegas - Mandarin Oriental hotel	234
4.3	Contemporary International Case study The City Center Las Vegas - Vdara Hotel & Spa	235
4.4	Contemporary International Case study The City Center Las Vegas - Veer Towers	236
4.5	Contemporary International Case study. The City Center Las Vegas - Crystals retail and entertainment district	237
4.6	Contemporary Regional Case study -Bahrain World Trade Center	238
4.7	Contemporary Regional Case study-Burj khalifa Dubai	239
4.8	Contemporary Local case study Lafarge head office, New Cairo, Egypt	240
4.9	Contemporary Local case study HSBC Smart Village business park, Cairo, Egypt	241
4.10	Contemporary Local case study-El Gouna Hurgada Egypt	242
<b>Chapter 5</b>		
5.1	Summary of the local rating tool for sustainable interior finishing products & materials Categories score sheet	269
5.2	Summary of the Credits to achieve for Category (1)	273
5.3	Details of prerequisites or Requirements and sub-categories criteria details of (Managing interior finishing work process). Category (1)	274- 276
5.4	Environmental data sheet of interior finishing products used for the submission of any finishing material on site	276- 277

5.5	Recyclable construction and demolition materials and markets	278
5.6	Summary of the Credits to achieve for the Category (2)	286
5.7	Details of prerequisites or Requirements and sub-categories criteria details of (Floor coverings & finishes) Category (2)	287-290
5.8	Proposal sheet for evaluating and comparing life cycle of a proposed finishing material or product.	291-292
5.9	Summary of the Credits to achieve for the Category(3)	295
5.10	Details of prerequisites or Requirements and sub-categories criteria details of (Floor coverings & finishes) Category (3)	296
5.11	Flooring covering materials Specifications of eco-friendly, sustainable rapidly renewable and environmental new technologies	297-300
5.12	Summary of the Credits to achieve for Category (4) table	304
5.13	Details of prerequisites or Requirements and sub-categories criteria details of (Furniture) Category (4)	305-307
5.14	Common Sources of Formaldehyde in Interior finishing and furniture materials.	307
5.15	Summary of the Credits to achieve for the Category (5)	311
5.16	Details of prerequisites or Requirements and sub-categories criteria details of (Openings; doors & windows):	312-313
5.17	Sustainable features concerning doors & windows materials choice	314
5.18	Sustainable features concerning framing materials choice	316
5.19	Glazing types properties for sustainable selection process	317
5.20	Summary of the Credits to achieve for the Category (6)	321
5.21	Details of prerequisites or Requirements and sub-categories criteria details of (Indoor Water conservation & Plumbing fixtures) Cat. (6)	322-325
5.22	Percentage of electricity consumption in buildings type in Egypt	326
5.23	Summary of the Credits to achieve for the Category (7)	329
5.24	Details of prerequisites or Requirements and sub-categories criteria details of (Energy efficiency (Electricity, Lighting, appliances, HVAC & electrical automated systems) Category (7)	330-333
5.25	Basic lighting principles and terms for the different interior spaces effective lighting	333-334
5.26	Types of lighting bulbs	335
5.27	Lighting lamps Comparison Chart	339
5.28	Five different categories of lighting controls	342
5.29	Summary of the Credits to achieve for the Category (8)	342
