

EPIDEMIOLOGY OF STROKE: A HOSPITAL BASED STUDY

Thesis

Submitted for partial fulfillment of Doctorate Degree (M.D) in
NEUROLOGY

By

MOHAMED SABER MENSRAWY
(M.B; B.Ch.; M.Sc.)

Supervised By

PROF. DR. OMAR AMIN AL SERAFY

*Professor of Neurology
Faculty of Medicine, Cairo University*

PROF. DR. FOAD ABDALLAH

*Professor of Neurology,
Faculty of Medicine, Cairo University*

DR. MOHAMED IBRAHIM HEGAZY

*Lecturer of Neurology,
Faculty of Medicine, Cairo University*

**FACULTY OF MEDICINE
CAIRO UNIVERSITY
2016**

تقرير جماعى

عن مناقشه رساله الدكتوراه المقدمه من الطبيب /محمد صابر منشاوى
توطئه للحصول على درجه الدكتوراه فى الامراض العصبية
اجتمعت لجنة المناقشه والحكم على الرساله من الطبيب / محمد صابر منشاوى
توطئه للحصول على درجه الدكتوراه فى الامراض العصبية والمشكلة بقرار من
مجلس الكلية والمعتمد من السيد الاستاذ الدكتور/ نائب رئيس الجامعة للدراسات
العليا

وتتكون من الساده الاساتذه :

- ا.د. عمر امين الصرفى استاذ الامراض العصبية (عن المشرفين)
ا.د. محمد سليمان الطماوى استاذ الامراض العصبية (ممتحن داخلى)
ا.د. ساميه عاشور استاذ الامراض العصبية (ممتحن خارجى)

وذلك بمشيئته الله تعالى يوم الخميس الموافق 2016/9/1 بقاعه المؤتمرات
بكلية الطب (القصر العينى)جامعة القاهرة قاعه (ب) فى تمام الساعة العاشره
والنصف

وشملت الدراسه: جلطات الاوعيه الدمويه الصغيره هى الاكثر انتشارا بين
المرضى المصريين. ارتفاع ضغط الدم كان عامل الخطورة الأكثر شيوعا بين
المرضى المصريين

قررت اللجنة بعد المناقشه :

ا.د. عمر امين الصرفى ا.د. محمد سليمان الطماوى ا.د. ساميه عاشور

س.د. ساميه عاشور
ا.د. محمد سليمان الطماوى
ا.د. عمر امين الصرفى

بسم الله الرحمن الرحيم

وَقُلْ رَبِّ زِدْنِي عِلْمًا

صدق الله العظيم
سورة طه، الآية: ١١٤

ACKNOWLEDGEMENT

First, and foremost, all thanks and gratitude to GOD, most gracious and most merciful

*I would like to express my sincere appreciation to **PROF. DR. OMAR AMIN AL-SERAFY**, Professor of Neurology, Faculty of Medicine, Cairo University, for his generous support, cooperation, encouragement and mostly for his patience to accomplish this work, to his I will always be grateful.*

*I am sincerely grateful to **PROF. DR. FOAD ABDALLAH**, Professor of Neurology, Faculty of Medicine, Cairo University, for giving me the privilege to work under his supervision and for enlightening me with his instructions, he was the beating heart of this work and without his it wouldn't have seen the light.*

*I would like to express my deepest gratitude and sincere appreciation to **DR. MOHAMED HEGAZY**, Lecturer of Neurology, Faculty of Medicine, Cairo University, for his continuous supervision and endless support, saving no time or effort in reading each and every word of this study to bring it to reality the best way it could be.*

ABSTRACT

BACKGROUND: there is new data about stroke in Egypt, this study aiming to study demographic data and risk factor of stroke in Egypt. **METHOD:** study demographic data and risk factor of stroke in all admitted cerebrovascular stroke patients in New Kasr Al Ainy Teaching Hospital through one year from January 2014 to January 2015. **Result:** Hypertension was the most common risk factor (82,5%) followed by diabetes mellitus (65.3%). History of TIA was (55.5%) of stroke patients. Among stroke type small artery disease was the most common stroke type (31.5%) of patients, large artery atherosclerosis was (25.8%) of patients and cardioembolic stroke was (17.3%) of patients. **CONCLUSION:** Small vessel disease is the most common stroke subtype among Egyptian patients in our study. Hypertension was the most common risk factor among Egyptian patients in our study. Public awareness through different media about stroke symptom, risk factor is important for proper management of stroke.

KEYWORDS:

Stroke epidemiology, Cairo, Egypt, risk factor stroke subtypes

INTRODUCTION

INTRODUCTION

Stroke remains one of the most devastating of all neurological diseases, often causing death or gross physical impairment or disability. As numerous countries throughout the world undergo the epidemiological transition of diseases, trends in the prevalence of stroke have dramatically changed (**Mukherjee *et al.*, 2011**).

There had been limited epidemiological studies of stroke in Egypt, previous studies included the governorates of Assuit, Sohag and the city of Al Quseir. All these were performed in relatively small populated governorates in upper Egypt (**Khedr *et al.*, 2013; Kandil *et al.*, 2006; Tallawy *et al.*, 2013**).

To our knowledge there is no epidemiological studies about stroke in any of the major heavy populated governorates in Egypt, which makes it difficult to delineate the magnitude of stroke burden in Egypt.

The New Kasr Al Ainy Teaching Hospital is considered to be the largest hospital serving the area of greater Cairo, which includes three major governorates (Cairo, Giza & Kaliubeya) with total population of 20,495,000 which presents 25.2% of Egypt's total population according to (**Central Agency for Public Mobilization and Statistics, 2012**).

AIM OF THE WORK

AIM OF THE WORK

To establish a hospital based Egyptian stroke registry in New Kasr Al Ainy Teaching Hospital.

REVIEW OF LITERATURE
