**STUDY OF ANTIOXIDANT EFFECTS
OF CERTAIN SUBSTANCES ON
ISCHAEMIC RAT BRAIN**

B11 V.V

A Thesis Presented

BY

Fakhreya Yousuf Hussain Mohammad Jalal
(B. Pharm. Sciences)

Submitted for the Degree of Master in Pharmaceutical Sciences
(Pharmacology & Toxicology)

Under the Supervision of

Prof. Dr. Ezz EL Din El Denshary

Professor of Pharmacology & Toxicology
Faculty of Pharmacy
Cairo University

Prof. Dr. Amina Salem Attia

Professor of Pharmacology & Toxicology
Faculty of Pharmacy
Cairo University

Prof. Dr. Mona Mahrous Seif El Nasr

Professor of Pharmacology & Toxicology
Faculty of Pharmacy
Cairo University

Faculty of Pharmacy
Cairo University

2002

بِسْمِ اللَّهِ الرَّحْمَنِ الرَّحِيمِ

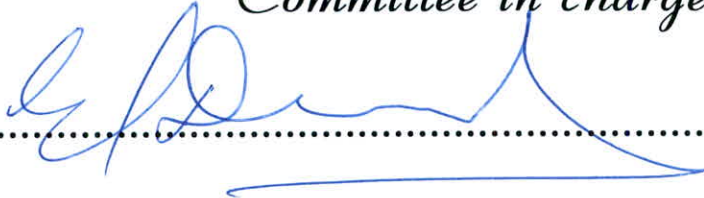

عَلَّمَ وَمَا أُوتِيَ مِنْ الْعِلْمِ إِلَّا قَلِيلًا

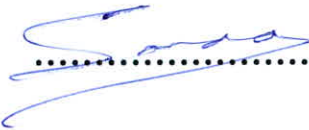

سورة الإسراء آية ٨٥

Acknowledgments

I would like to express my deepest gratitude and appreciation to Dr. Ezz El Din El Denshary, Professor of Pharmacology and Toxicology, Faculty of Pharmacy, Cairo University for his invaluable support, active supervision and guidance to produce this work. Without his valuable supports this work would have never been the way it is.

I would also like to extend my thanks to Dr. Amina Salem Attia, Professor of Pharmacology and Toxicology, Faculty of Pharmacy, Cairo University, who has always been keen on offering encouragement and help throughout experimental work and writing of the thesis.

I'm also greatly indebted to Dr. Mona Mahrous Seif El Nasr, Professor of Pharmacology and Toxicology, Faculty of Pharmacy, Cairo University, for her extreme patience and due help without which I would have never been able to produce such a work.

Also thanks must be extended to my parents whose supports will always be cherished, may God reward them all.

Finally I would like to express my gratitude to members of the Department of Pharmacology and Toxicology for their kindness and encouragement.

Contents

	Pages
1- Introduction	1
1.1. Pathophysiology of cerebral ischaemia	5
1.2. Factors involved in ischaemia/reperfusion damage.....	5
1.2.1. Energy failure	8
1.2.2. Glutamate receptor-mediated excitotoxicity	10
1.2.3. Disturbance of Ca^{2+} homoeostasis	13
1.2.4. Formation of free radicals	17
1.2.4.1. Potential mechanisms for radical production during ischaemia/reperfusion	20
a. Ubisemiquinone radical	20
b. Arachidonic acid metabolism	21
c. Purine catabolism	22
d. Neutrophils	23
e. Glutamate receptor agonists	26
f. Nitric oxide	28
g. Monoamine accumulation	28
1.2.5. Acidosis	29
1.3. Pathology of free radical toxicity.....	30
1.3.1. Necrosis and apoptosis	30
1.3.2. Glial cell response	31
1.3.3. Gene activation	34
1.4. Antioxidants	35
1.4.1. Radical scavenging/antioxidant neuroprotective mechanisms	37
1.4.2. Types of antioxidants	39
1.4.2.1. Antioxidant enzymes.....	39
a. Superoxide dismutase	39

b. Catalase	41
c. Glutathione peroxidase	41
1.4.2.2. Thiol molecules	41
a. Glutathione (GSH)	41
b. Alpha-lipoic acid	43
c. The thioredoxin and glutaredoxin systems	44
d. Taurine and hypotaurine	44
1.4.2.3. Natural antioxidants	45
a. Flavonoids	45
b. Isoflavonoids	45
c. Vitamin E	46
d. Vitamin C (ascorbic acid)	47
e. Vitamin A	50
1.5. Agents used as antioxidants and tested for their effect	
in the present work	51
1.5.1. Vitamin C	51
1.5.2. Omega-3 fatty acids	51
1.5.3. Quercetin	55
1.5.4. Coenzyme Q ₁₀ (CoQ ₁₀)	56
2- Aim of the work	60
3- Materials and methods	62
3.1. Materials	62
3.1.1. Animals	62
3.1.2. Drugs and chemicals	62
3.2. Experimental design	63
3.3. Methods	65
3.3.1. Induction of cerebral ischaemia	65
3.3.2. Classification	65
3.3.3. Tissue sampling	67

3.3.4. Estimation of lactate dehydrogenase (LDH) activity in brain cytosol	67
3.3.5. Estimation of superoxide dismutase (SOD) activity in brain cytosol	69
3.3.6. Estimation of malondialdehyde (MDA) content in brain homogenate	72
3.3.7. Estimation of reduced-glutathione (GSH) content in brain homogenate.....	75
3.3.8. Statistical methods.....	78
4- Results	79
4.1. Effect of ascorbic acid on the oxidative state of the brain of rats that underwent ischaemia followed by reperfusion.....	79
4.1.1. Cytosolic lactate dehydrogenase enzyme activity.....	79
4.1.2. Cytosolic superoxide dismutase enzyme activity.....	79
4.1.3. Malondialdehyde level in the brain	79
4.1.4. Reduced-glutathione level in the brain	80
4.2. Effect of omega-3 fatty acids on the oxidative state of the brain of rats that underwent ischaemia followed by reperfusion.....	86
4.2.1. Cytosolic lactate dehydrogenase enzyme activity.....	86
4.2.2. Cytosolic superoxide dismutase enzyme activity.....	86
4.2.3. Malondialdehyde level in the brain	86
4.2.4. Reduced-glutathione level in the brain	87
4.3. Effect of quercetin on the oxidative state of the brain of rats that underwent ischaemia followed by reperfusion...	93
4.3.1. Cytosolic lactate dehydrogenase enzyme activity.....	93
4.3.2. Cytosolic superoxide dismutase enzyme activity.....	93
4.3.3. Malondialdehyde level in the brain	93
4.3.4. Reduced-glutathione level in the brain	94

4.4. Effect of coenzyme Q₁₀ on the oxidative state of the brain of rats that underwent ischaemia followed by reperfusion...	100
4.4.1. Cytosolic lactate dehydrogenase enzyme activity.....	100
4.4.2. Cytosolic superoxide dismutase enzyme activity.....	100
4.4.3. malondialdehyde level in the brain.....	100
4.4.4. Reduced-glutathione level in the brain.....	101
5- Discussion.....	107
6- Summary and conclusions.....	124
7- References	127
8- Arabic summary	208

List of Figures

	Pages
1- Introduction:	
Fig.1. Pathways of ischaemic cell death.....	7
Fig.2. Ischaemic thresholds for functional and electrical failure, and for metabolic and membrane failure.....	9
Fig.3. Relationships among glutamate release, increase in intracellular calcium, and intracellular generation of reactive oxygen species.....	11
Fig.4. Schematic diagram illustrating pre-and postsynaptic ion channels, with emphasis on voltage-sensitive and agonist- operated calcium channels.....	12
Fig.5. Overview of the transport pathways and the organelles involved in Ca^{2+} homoeostasis in neurons.....	13
Fig.6. Calcium handling by cells.....	15
Fig.7. Various functions of the inner mitochondrial membrane under normal condition (top), and possible mechanisms of mitochondrial dysfunction due to reactive oxygen species (bottom).....	17
Fig.8. Oxygen radicals in cerebral ischaemia and reperfusion injury.....	18
Fig.9. Sources of superoxide and hydroxyl radicals in cerebral ischaemia.....	19
Fig.10. Proposed pathways for events linking cerebral ischaemia to neuronal death.....	24
Fig.11. Early effects of ischaemia-reperfusion on tissue damage.....	24
Fig.12. Hypothetical vicious cycle between free radical formation and excitotoxicity.....	27
Fig.13. Schematic representation of interaction between superoxide anion ($\text{O}_2^{\cdot-}$) and nitric oxide (NO), and their metabolis.....	29

Fig.14.	Involvement of mitochondria in the apoptotic cascade.....	30
Fig.15	Mitochondria as targets for oxidative stress signaling after cerebral ischaemia.....	40
Fig.16.	Schematic representation of glutathione cycle.	43

3- Materials and methods:

Fig.17.	Standard curve of superoxide dismutase correlating various units with the corresponding % inhibition of pyrogallol autoxidation.....	71
Fig.18.	Standard curve of malondialdehyde correlating various concentrations with the corresponding difference in absorbance.....	74
Fig.19.	Standard curve of reduced-glutathione correlating various concentrations with corresponding absorbance.....	77

4- Results:

Fig.20.	Effect of pretreatment of ascorbic acid in a dose of 200 mg/kg or 500 mg/kg (i.p.) on brain cytosolic lactate dehydrogenase enzyme activity in response to ischaemia/reperfusion in rats.....	82
Fig.21.	Effect of pretreatment of ascorbic acid in a dose of 200 mg/kg or 500 mg/kg (i.p.) on brain cytosolic superoxide dismutase enzyme activity in response to ischaemia/reperfusion in rats.....	83
Fig.22.	Effect of pretreatment of ascorbic acid in a dose of 200 mg/kg or 500 mg/kg (i.p.) on brain malondialdehyde content in response to ischaemia/reperfusion in rats.....	84
Fig.23.	Effect of pretreatment of ascorbic acid in a dose of 200 mg/kg or 500 mg/kg (i.p.) on brain reduced-glutathione content in response to ischaemia/reperfusion in rats.....	85
Fig.24.	Effect of preadministration of omega-3 fatty acids in an oral dose of 2 ml/kg or 5 ml/kg for 6 days on brain cytosolic lactates dehydrogenase enzyme activity in response to ischaemia/reperfusion in rats.....	89
