Building Integrated Photovoltaics As An Approach for Sustainable Development

BY

Nourhan Ahmed Ali Ali Heiba

A thesis Submitted to the
Faculty of Engineering at Cairo University
in Partial Fulfillment of the
Requirements for the Degree of Master of Science
In
Architectural Engineering

Under the Supervision of:

Prof. Dr. Ayman Hassan Ahmed
Professor of Landscape Design
Faculty of Engineering
Cairo University

Dr. Haitham Samir Mahmoud
Assistant Professor- Modern
Academy for Engineering
and Technology

FACULTY OF ENGINEERING, CAIRO UNIVERSITY
GIZA, EGYPT

January 2015

ACKNOWLEDGMENT

I want to declare my appreciation to Prof. Dr. Ayman Hassan and Dr. Haitham Samir, Both have major contribution through their guidance and support.

I would like to thanks to Dr. Haitham Samir for important directions and great support.

I wish to thank my mother and father and my sister for support and encouragement. I would love to thank them for pushing me forward and standing beside me in hard time.

Contents:

I.	list of figures.....	i
II.	List of tables.....	iv
III.	Abstract.....	viii
IV.	Introduction.....	ix
V.	Research problem.....	x
VI.	Research Question.....	x
VII.	Research Methodology.....	x
VIII.	Research structure.....	xii

Chapter one: Sustainable Development and Non-Renewable Energy

1.1.	Introduction:.....	1
1.2.	Sustainable Development Definition:	1
1.3.	Sustainable Development Dimensions:	2
1.4.	Sustainable environment Aspects:	3
1.4.1	Climate change:.....	3
1.4.2	Ozone Layer Depletion:	4
1.4.3.	Pollution issue:.....	4
1.4.4.	Loss of biodiversity:.....	5
1.4.5.	Health issue:	6
1.4.6.	Energy consumption:	6
1.5.	Energy:	6
1.5.1.	Non renewable energy:.....	7
1.5.1.1.	Chemical:	7
1.5.1.2.	Nuclear :.....	9
1.5.1.3.	Nonrenewable energy causes greenhouse gas emission:.....	9
1.5.3.	World Statistics of Renewable and NON-Renewable energy:	10
1.6.	conclusion:	10
2.1.1.	Hydropower energy definition:.....	11
2.1.1.1.	River plant:	11
2.1.1.2.	Pumped Storage Power Plants:	12
2.1.1.3.	Oceanic Power Plant:.....	14
2.1.1.4.	Wave power:	14
2.1.2.	Solar energy:	17
2.1.2.1.	Photovoltaic power station:	18
2.1.2.2.	Solar power water pump:	19
2.1.2.3.	Building integration photovoltaics(BIPV):	19
2.1.3.	Wind energy resource:	27
2.1.3.1.	Effect of wind turbine size and height:	27
2.1.3.2.	Types of wind turbine:	27
2.1.3.3.	Building integrated wind turbines or mounted on a building (BIWTs):.....	30
2.1.4.	Biomass:	35

2.1.4.1.Biomass Classification:	35
2.1.4.3.Examples of biomass in architecture:	36
<i>Algae Skin Buildings:Bio Intelligence Quotient Building (BIQ), Hamburg Germany</i>	36
2.1.5.Geothermal energy:	39
2.1.5.1.Utilization process:	39
2.1.5.2.Types Of Geothermal Systems:	40
2.1.5.3.Boston University's Geothermal Building:	40
2.1.6.Conclusion:	41
<i>Algae Skin Buildings: Hamburg Germany which saves 50 % of building consumption.</i>	42
3.1.1. Crude oil in egypt:.....	43
3.1.2. Natural Gas in Egypt:	44
3.2.Renewable energy in Egypt:	44
3.2.1.Wind :	45
3.2.1.1.Zafarana wind Station power with capacity 545 MW:	46
3.2.1.2.Hurghada Wind Farm 5 MW:	48
3.2.2. Hydraulic energy:.....	49
3.2.3.Biomass in Egypt:	50
3.2.4.Solar Energy Resources:	51
3.2.4.1.Solar energy for water pump:Egypt was among the first countries to utilize solar energy. In 1910, A merican engineer F. Shuman built a practical industrial scale solar system engine at Maadi south to Cairo us ing solar thermal parabolic collectors as shown in Figure(3.12). The engine was used to produce steam whic h drove a series of large water pumps for irrigation.	51
3.2.4.2.Concentrating solar power :	52
3.2.4.3. photovoltaics in Egypt:	53
3.3.1.wind furure projects:.....	57
3.3.2.Solar projects:	58
3.4.Conclusion:	58
• Is located in Shobra El Khima	59
• Integrating mono and polycrystalline in the façade and produce 9.63 kwp	59
• is located in Abo Al Ghraddek in Matro.....	59
• pv cost 80,000 L.E	59
• integrate 24 monocrystalline panel which produce 20 kwp.	59
• Located in Bahira	59
• Integrating monocrystalline on roofs which produce 150 kWp	59
• cost 4millions with payback time 5 years	59
4.1. Introduction about photovoltaic:-.....	60
4.2. history of photovoltaic and who invented it first:	61
4.3. Advantages and disadvantages of Photovoltaics	63
4.4. Pv Basics:	63
4. 5. Classification of photovoltaics:	64
4.5.1. First Generation:	64

4.5.1.1. Mono-crystalline silicon cells.....	64
4.5.1.2. Poly or multi-crystalline silicon cells:.....	65
3.5.2. Second generation:	65
3.5.2.1 Amorphous silicon cells:	66
4.5.2.2. Cadmium Telluride (CdTe) and Copper indium gallium selenide (CIGS):	67
4.6. Pv Cost:.....	68
4.7. Payback period:	69
4.8. Building Integrated Photovoltaics (BIPV) System:	69
4.8.1. Stand alone system :	71
4.8.2. Grid Connected PV system:	72
4.8.3. Building integration photovoltaics system statistics:.....	73
4.9. Factor that effect photovoltaic efficiency:.....	74
4.9.1. Module Orientation and Tilt Angles :	74
4.9.2. Temperature effect on photovoltaic:	76
4.9.3. Colour and texture.....	76
4.9.4. Transparency:	77
4.9.5. Effect of shading on photovoltaic efficiency:.....	78
4.8.6. Effect of dust on photovoltaics efficiency:.....	79
4.9. Conclusion:	81
5.1. Building Integration Photovoltaics for Non Residential Buildings:.....	82
5.2. Façade :	83
5.2.1. Cold façade :	83
5.2.2. Warm Façade :	84
5.2.3. Double Façade :	85
5.3. Pv integrated in roof:.....	85
5.3.1. Flat Roof:.....	85
5.3.1.1. The cold roof:.....	86
5.3.1.2. Warm roof:.....	89
5.3.2. Sloped roof:	90
5.3.2.1. PV panel into sloped roof:	91
5.3.2.2. PV panel onto sloped roof (ventilated):	92
5.4. Photovoltaic shades:.....	93
5.4.1. Fixed Pv Shading:	93
6.4.2. Movable PV shading:	93
5.5. Skylight:	93
5.6. BIPV Examples:.....	94
5.6.1. BP Solar Showcase in BIRMINGHAM, PORT TALBOT:	94
5.6.2. Zero-energy building of Acciona Solar in Spain:	96
5.6.3. Paul-Horn Arena in Germany:.....	97

5.6.4.Rooftop PV Plant at Politecnico di Milano:.....	98
5.6.5.Wankdorf Stadium, in Bern, Switzerland with pv integration on roof :.....	99
5.6.7.The Smithsonian Tropical Research Institute (STRI):	100
5.6.8.Red tower in eastern Germany:	102
5.6.9.Kowa Elementary School in Tokyo, Japan:	102
5.6.10.THE HYBRID FAÇADE OF FIAT RESEARCH CENTRE:.....	103
5.6.11. Zero Carbon Building in Hong Kong:.....	104
5.7.Conclusion:	105
Facade.....	106
Grid connected	106
Zero- energy building of Acciona Solar, in Spain which integrated pv into façade and roof which produce 89 % (52 KWh) of building energy needed and the rest of needed energy is accomplished by geothermal power for cooling and heating the building.....	106
Paul- Horn Arena in Germany integrated amorphous silicon pv panels into façade which produce annually 30,000 K Wh.....	106
6.1.Case study analysis:	107
A. Building	107
B. Photovoltaics System Type.....	107
C. Building Integration Photovoltaics Type.....	107
6.1.1.Methodology:	107
6.1.2. Criteria of case study selection:	108
6.1.3. Tools:	108
6.1.4. building integration photovoltaics framework.....	109
6.2. Pv softwares	110
PVscout.....	110
6.2.1.Reason for choosing pvsystm program in simulation:	110
6.2.2.pv syst. Software steps:	111
6.2.2.1.choosing a section:	111
6.2.2.3.Input parameters:	112
6.2.2.4.Output:	115
6.3.International and National Analysis	119
6.3.1.St Mary's Church Hall	119
6.3.2.University of Gloucestershire Sports Centre:.....	120
6.3.3.North Devon District Council:	121
6.3.4. Engineering building for Khalada Petrol company	122
6.3.5.EGAS Building.....	123
6.3.6.German School	124
6.4. Comparing National and International Buildings Case of Study:	126
6.4.German school simulation:.....	126

6.4.1.Pv panel at 0°:	127
6.4.2.Pv panels at 5°:	128
6.4.3.Pv panel at 30°:.....	129
6.4.4.Pv panels at 60°:	130
7.1.Conclusion:	131
7.2.Recommendations:.....	132
7.2.1.Future research topics:	132
