

Non-endoscopic parameters for prediction of esophagogastric varices in Egyptian Patients with Budd Chiari Syndrome

Thesis

Submitted for Partial Fulfillment of Master Degree in **Tropical Medicine**

By

Saad Ali Saad Mohammed

M.BB.Ch.

Under Supervision of

Prof. Dr. Zakaria Yahia Mohran

Professor of Tropical Medicine

Faculty of Medicine-Ain Shams University

Prof. Dr. Mohammad El-Ghareeb Abou Elmaaty

Professor of Radiodiagnosis

Faculty of Medicine-Ain Shams University

Dr. Ahmed Samir Abdelmoaty

Lecturer of Tropical Medicine

Faculty of Medicine- Ain Shams University

Faculty of Medicine
Ain Shams University

List of Contents

Title	Page No.
List of Tables	3
List of Figures.....	9
List of Abbreviations	13
Protocol	
Introduction	1
Aim of the Work	6
Review of Literature	
▪ Hepatic Vascular Anatomy and Circulation.....	7
▪ Budd Chiari Syndrome.....	16
▪ Portal Hypertension.....	64
▪ Non Invasive Prediction of Esophageal Varices.....	111
Patients and Methods.....	123
Results	131
Discussion.....	192
Summary	218
Conclusion	222
Recommendations	223
References	224
Arabic Summary	

List of Tables

Table No.	Title	Page No.
Table (1):	Inherited and acquired causes of thrombophilia implicated in etiology of BCS.....	21
Table (2):	Prevalence of different risk factors in BCS patients	32
Table (3):	Relative risk of thrombosis coupled to different risk factors for thrombophilia	32
Table (4):	Proposed work-up for acquired causes of thrombophilia implicated in primary BCS	49
Table (5):	Suggested workup for inherited causes of thrombophilia implicated in primary BCS	50
Table (6):	Classification of portal hypertension according to the anatomic site of increased resistance to portal blood flow	71
Table (7):	Detection of CSPH (HVPg > or equal to 10 mmHg) by the use of TE	79
Table (8):	Age and Gender distribution among the studied patients	134
Table (9):	Classification of patients according to the onset of the disease	135
Table (10):	Frequency of inherited procoagulative disorders among studied patients	136
Table (11):	Frequency of different acquired pro-coagulative disorders	137
Table (12):	Status of etiologies of BCS (combined, single and idiopathic) in the studied cases	138
Table (13):	Frequency of different symptoms and signs in the studied patients	139

List of Tables (cont...)

Table No.	Title	Page No.
Table (14):	Laboratory data of the studied patients (n=216).....	141
Table (15):	Baseline results of ascitic sampling of the studied patients.....	142
Table (16):	Baseline radiological criteria of the studied patients; using duplex U/S	144
Table (17):	Pattern of occlusion of hepatic veins in studied patients.....	146
Table (18):	Baseline relevant endoscopic findings of the studied patients.....	147
Table (19):	Presence of other endoscopic findings among the investigated patients (n=120)	147
Table (20):	Etiology of GIT bleeding in studied patients (n=39).....	149
Table (21):	Comparison between patients with esophageal varices and those without varices regarding Age and Gender distribution among the studied patients.....	150
Table (22):	Comparison between patients with esophageal varices and those without varices regarding types of presentation among the studied patients.....	152
Table (23):	Comparison between patients with esophageal varices and those without varices regarding the etiology of the etiology among the studied patients.....	153

List of Tables (cont...)

Table No.	Title	Page No.
Table (24):	Comparison between patients with esophageal varices and those without varices regarding the multiplicity of the etiology among the studied patients.....	153
Table (25):	Comparison between patients with esophageal varices and those without varices regarding the clinical data among the studied patients	154
Table (26):	Comparison between patients with esophageal varices and those without varices regarding the laboratory data among the studied patients.....	156
Table (27):	Comparison between patients with esophageal varices and those without varices regarding the ascetic fluid samples among the studied patients.....	158
Table (28):	Comparison between patients with esophageal varices and those without varices regarding the common fibrosis predictive scores among the studied patients.....	160
Table (29):	Comparison between patients with esophageal varices and those without varices regarding the radiological data among the studied patients (US with Doppler)	163
Table (30):	Comparison between patients with esophageal varices and those without varices regarding the radiological data among the studied patients (US).....	165

List of Tables (cont...)

Table No.	Title	Page No.
Table (31):	Comparison between patients with esophageal varices and those without varices regarding the pattern of hepatic veins occlusion among the studied patients (US with Doppler)	167
Table (32):	Comparison between patients with large esophageal varices and small esophageal varices regarding Age and Gender distribution among the studied patients	168
Table (33):	Comparison between patients with Small esophageal varices and those large varices regarding types of presentation among the studied patients	169
Table (34):	Comparison between patients with Small OV and Large OV regarding the etiology of the etiology among the studied patients	170
Table (35):	Comparison between patients with Small OV and Large OV regarding multiplicity of the etiology among the studied patients	170
Table (36):	Comparison between patients with Small EV and Large EV regarding the clinical data among the studied patients	171
Table (37):	Comparison between patients with small esophageal varices and those with large varices regarding the laboratory data among the studied patients	173
Table (38):	Comparison between patients with small esophageal varices and those with large varices regarding the ascetic fluid samples among the studied patients	174

List of Tables (cont...)

Table No.	Title	Page No.
Table (39):	Comparison between patients with large esophageal varices and those with small varices regarding the common predictive scores among the studied patients	175
Table (40):	Comparison between patients with small esophageal varices and those with large varices regarding the radiological data among the studied patients (US).....	176
Table (41):	Comparison between patients with small esophageal varices and those with large varices regarding the radiological data among the studied patients (US with Doppler)	178
Table (42):	Descriptive data for patients with gastric varices (n: 15).....	180
Table (43):	Comparison between patients with PHG and without PHG regarding Age and Gender distribution among the studied patients.....	182
Table (44):	Comparison between patients with PHG and without PHG regarding types of presentation among the studied patients.....	183
Table (45):	Comparison between patients with PHG and without PHG regarding the etiology of the etiology among the studied patients	184
Table (46):	Comparison between patients with PHG and without PHG regarding the multiplicity of the etiology among the studied patients	184
Table (47):	Comparison between patients with PHG and without PHG regarding the clinical data among the studied patients.....	185

List of Tables (cont...)

Table No.	Title	Page No.
Table (48):	Comparison between patients with PHG and without PHG regarding the laboratory data among the studied patients.....	186
Table (49):	Comparison between patients with PHG and without PHG regarding the ascetic fluid samples among the studied patients	187
Table (50):	Comparison between patients with PHG and without PHG regarding the common fibrosis predictive scores among the studied patients	188
Table (51):	Comparison between patients with PHG and without PHG regarding the radiological data among the studied patients (US with Doppler) .	189
Table (52):	Comparison between patients with PHG and without PHG regarding the radiological data among the studied patients (US).....	190
Table (53):	Comparison between patients with PHG and without PHG regarding the pattern of hepatic veins occlusion among the studied patients (US with Doppler).....	191
Table (54):	The etiology of BCS in different studies compared to the current study.....	197
Table (55):	Clinical manifestations of BCS in different studies compared to the current study.....	199

List of Figures

Fig. No.	Title	Page No.
Figure (1):	Segmental anatomy of the liver	7
Figure (2):	Vascular anatomy of the liver	11
Figure (3):	Portal circulation.....	11
Figure (4):	Diagram of the distribution of the four main portal veins to the segments of the liver and the hepatic venous drainage to the inferior vena cava	13
Figure (5):	Zones of the liver parenchyma	15
Figure (6):	Thrombus in the middle hepatic vein	39
Figure (7):	Chronic thrombosis of right hepatic vein	40
Figure (8):	Web in inferior vena cava. Sagittal sonogram of upper abdomen demonstrates Echogenic web constricting inferior vena cava (IVC) at subdiaphragmatic level.....	40
Figure (9):	Intrahepatic collateral veins suggestive of Budd-Chiari syndrome	43
Figure (10):	Hypertrophy of caudate lobe	43
Figure (11):	Inhomogeneous enhancement of liver	45
Figure (12):	Parenchymal changes in Budd-Chiari syndrome	45
Figure (13):	MRI showing intrahepatic collaterals (MRI).....	46
Figure (14):	Venogram showing TIPS insertion in a BCS patient	57
Figure (15):	TIPS insertion after IVC stent placement in a BCS patient.....	58

List of Figures (cont...)

Fig. No.	Title	Page No.
Figure (16):	Grade II esophageal varices in cirrhotic patient with associated gastric varices and HCC	77
Figure (17):	Esophageal varices.....	91
Figure (18):	A large gastric varix (IGV1) with a recent nipple sign	92
Figure (19):	Portal hypertensive gastropathy with the typical “snake skin” pattern in a patient with liver cirrhosis	93
Figure (20):	Endoscopic view through the transparent cap mounted at the tip of the endoscope at a ligated varix in the lower esophagus	104
Figure (21):	Oesophageal varices after Band ligation.....	105
Figure (22):	Study group selection.	132
Figure (23):	Classification of the studied 216 patients according to the results of upper GIT endoscopy.....	132
Figure (24):	Gender distribution among the studied patients.	134
Figure (25):	Classification of patients according to the onset of the disease.	135
Figure (26):	Frequency of inherited procoagulative disorders among studied patients.	136
Figure (27):	Frequency of different acquired procoagulative disorders.	137
Figure (28):	Status of etiologies of BCS (combined, single, idiopathic) in the studied cases.	138

List of Figures (cont...)

Fig. No.	Title	Page No.
Figure (29):	Frequency of different symptoms in studied patients.	140
Figure (30):	Frequency of different signs in studied patients.	140
Figure (31):	Results of total protein in ascitic fluid (n=193).	143
Figure (32):	Results of total protein in serum ascites albumin gradient (SAAG) (n=193).	143
Figure (33):	Classification of patient according to size of OV. ...	148
Figure (34):	Classification of patient according to Fundal Varices.	148
Figure (35):	Classification of patient according to PHG.	149
Figure (36):	Comparison between patients with esophageal varices and those without varices regarding Gender distribution among the studied patients.	151
Figure (37):	Comparison between patients with esophageal varices and those without varices regarding the clinical data among the studied patients.	155
Figure (38):	Comparison between patients with esophageal varices and those without varices regarding PLT.	157
Figure (39):	Comparison between patients with esophageal varices and those without varices regarding SAAG ratio.	159

List of Figures (cont...)

Fig. No.	Title	Page No.
Figure (40):	Comparison between patients with esophageal varices and those without varices regarding LOK score.....	161
Figure (41):	Roc curve in predicting positive OV.....	162
Figure (42):	Comparison between patients with esophageal varices and those without varices regarding the radiological data among the studied patients (US with Doppler).....	163
Figure (43):	Comparison between patients with esophageal varices and those without varices regarding the radiological data among the studied patients (US)	165
Figure (44):	Comparison between patients with esophageal varices and those without varices regarding the radiological data among the studied patients regarding ascites.....	166
Figure (45):	Comparison between patients with Small EV and Large EV regarding the clinical data among the studied patients.....	172
Figure (46):	Comparison between patients with small esophageal varices and those with large varices regarding the radiological data among the studied patients (US).....	176
Figure (47):	Comparison between patients with small esophageal varices and those with large varices regarding the radiological data among the studied patients regarding ascities.....	177
Figure (48):	Comparison between patients with small esophageal varices and those with large varices regarding the radiological data among the studied patients (US with Doppler).....	178
