

Evaluation of the Effect of Ozonized Water on the Periodontium of Normal & Diabetic Rats

Thesis

Submitted for the Partial Fulfillment of the
Requirements for the Doctor Degree in
Oral Medicine and Periodontology

By

Basma Mostafa Zaki Mostafa

Family

Acknowledgement

First and fore most, I always feel grateful to “**Allah**” the most merciful and the most gracious.

I would like to express my sincere appreciation and gratitude to **Prof. Dr. Nagwa Abd Elhamid Osman** (Professor and Former Head of Oral Medicine and Periodontology Department, Faculty of Oral & Dental Medicine, Cairo University), for her meticulous guidance and generous supervision.

My great thanks go to **Prof. Dr. Efat Ahmed Abass** (Professor of Oral Pathology and Head of Oral and Dental Research Department, National Research Center, Cairo), for her constant advice, valuable suggestions & continuous guidance.

I feel greatly thankful to **Prof. Dr. Atef Elshahat Atia** (Professor of Oral Medicine and Periodontology, Faculty of Oral & Dental Medicine, Cairo University) for providing me with encouragement and support, constant advice & help throughout the course of my work.

My sincere thanks and respect to **Prof. Dr. Zakria Elkiat** (Professor in Medical Biochemistry Department, National Research Center, Cairo) for his advice and guidance.

I am also grateful to **Dr. Shadyia Hanem Mahmoud Elraftee** (Assistant Professor Researcher in the

Chemical Engineering Department, National Research Center, Cairo) for her technical support and precious help.

My thanks are also to **Dr. Abd Elrazek Hussein** (Researcher in the Pathology Department, National Research Center, Cairo) for his help and encouragement throughout the study.

I address my thanks to the members of the group of both the Oral and Dental Research Department in the National Research Center and the Oral Medicine and Periodontology Department in Cairo University for the nice atmosphere they always try to create inside the groups.

Finally, my thoughts inevitably go to my family, my parents and my husband and to all those persons who always, critically, constructively supported my choices and my work. To all of them I address my deepest gratitude and best wishes.

List of Abbreviations

List of Abbreviations

1	AGE	Advanced glycation end products
2	ATP	Adenosine triphosphate
3	C. albicans	Candida albicans
4	Co-A	Coenzyme A
5	DNA	Deoxyreibo nucleic acid
6	DI	DNA index
7	DM	Diabetes mellitus
8	2, 3 DPG	2, 3 diphosphoglycerate
9	E. coli	Escherichia coli
10	EDTA	Diamine tetra-acetic acid
10	GDM	Gestational diabetes mellitus
11	G-6PD	Glucose 6 phosphate dehydrogenase
12	H ₂ O ₂	Hydrogen peroxide
13	H ₂ SO ₄	Sulphuric acid
14	Hz	Hertz
15	KI	Potassium iodide
16	MRSA	Methicillin resistant staphylococcus aureus
17	M Pa	Mega Pascal
18	NAPD	Nicotinamide adenine Dinucleotide phosphate

19	NaCl	Sodium chloride
20	Na ₂ S ₂ O ₃	Sodium thiosulphate
21	O	Singlet oxygen
22	O ₂	Oxygen
23	O ₃	Ozone
24	PMNL	Polymorphnuclear Leukocytes
25	RBC	Red blood corpuscle
26	RNA	Reibo nucleic acid
27	ROS	Reactive oxygen species
28	STZ	Streptozocin
29	SD	Standard deviation
30	v	Voltage
31	W	Watt

List of figures

No.	Title	Page no.
1	Photograph of the Streptozocin used to induce diabetes in the rats.	44
2	Photograph of the Ozone generator used during the experiment.	47
3	Photograph of the image analysis system used for cytometric and morphometric measurements. (H &E x200)	50
4a	A photomicrograph of the gingiva of non-diabetic control rat showing normal histological features of the surface epithelium. (H &E x100)	91
4b	A photomicrograph showing normal alveolar bone (B), periodontal ligament (P) and cementum(C) of non-diabetic control rat.	91
5a	A photomicrograph of the gingiva of non-diabetic rat which received one ozone application for one month showing normal histological features of the surface epithelium. (H &E x200)	93
5b	A photomicrograph showing alveolar bone (B), periodontal ligament (P) and cementum(C) of non-diabetic rat which received one ozone application for one month. (H&E x200)	93
6a	A photomicrograph of the gingiva of non-diabetic rat which received two ozone applications for one month. (H&E x200)	95
6b	A photomicrograph showing alveolar bone (B), periodontal ligament (P) and cementum(C) of non-diabetic rat which received two ozone applications for one month. (H&E x200)	95
7a	A photomicrograph of the gingiva of non-diabetic rat which received three ozone applications for one month. (H&E x100)	97
7b	A photomicrograph showing alveolar bone (B), periodontal ligament (P) and cementum(C) of non-diabetic rat which received three ozone applications for one month. (H &E x200)	97
8a	A photomicrograph of the gingiva of non-diabetic rat which received one ozone application for three months. (H&E x200)	99
8b	A photomicrograph showing periodontal ligament (P) and cementum(C) of non-diabetic rat which received one ozone application for three months. (H&E x200)	99
9a	A photomicrograph of the gingiva of non-diabetic rat which received two ozone applications for three months. (H&E x100)	101
9b	A photomicrograph showing alveolar bone (B), periodontal ligament (P) and cementum(C) of non-diabetic rat which received two ozone applications for three months. (H&E x200)	101
10a	A photomicrograph of the gingiva of non-diabetic rat which received three ozone applications for three months. (H&E x200)	103

10b	A photomicrograph showing alveolar bone (B), periodontal ligament (P) and cementum(C) of non-diabetic rat which received three ozone applications for three months. (H&E x200)	103
11a	A photomicrograph of the gingiva of non-diabetic rat which received one ozone application for six months. (H&E x100)	105
11b	A photomicrograph showing periodontal ligament (P) of non-diabetic rat which received one ozone application for 6 months.(Hx.&E.x200)	105
12a	A photomicrograph of the gingiva of non-diabetic rat which received two ozone applications for six months. (H&E x200)	107
12b	A photomicrograph showing alveolar bone (B), periodontal ligament (P) and cementum (C) of non-diabetic rat which received two ozone applications for six months. (H&E x200)	107
13a	A photomicrograph of the gingiva of non-diabetic rat which received three ozone applications for six months. (H&E x100)	109
13b	A photomicrograph showing alveolar bone (B), periodontal ligament (P) and cementum (C) of non-diabetic rat which received three ozone applications for six months. (H&E x100)	109
14a	A photomicrograph of the gingiva of diabetic control rat showing normal histological features of surface epithelium. (H&E x200)	111
14b	A photomicrograph showing normal alveolar bone (B), periodontal ligament (P) and cementum (C) of diabetic control rat. (H&E x200)	111
15a	A photomicrograph of the gingiva of diabetic rat which received one ozone application for one month. (H&E x200)	113
15b	A photomicrograph showing alveolar bone (B), periodontal ligament (P) and cementum (C) of diabetic rat which received one ozone application for one month. (H&E x200)	113
16a	A photomicrograph of the gingiva of diabetic rat which received two ozone applications for one month. (H&E x200)	115
16b	A photomicrograph showing alveolar bone (B), periodontal ligament (P) and cementum (C) of diabetic rat which received two ozone applications for one month. (H&E x100)	115
17a	A photomicrograph of the gingiva of diabetic rat which received three ozone applications for one month. (H&E x200)	117
17b	A photomicrograph showing alveolar bone (B), periodontal ligament (P) and cementum (C) of diabetic rat which received three ozone applications for one month. (H&E x200)	117
18a	A photomicrograph of the gingiva of diabetic rat which received one ozone application for three months. (H&E x100)	119
18b	A photomicrograph showing alveolar bone (B), periodontal ligament (P) and cementum (C) of diabetic rat which received one ozone application for three months. (H&E x200)	119

19a	A photomicrograph of the gingiva of diabetic rat which received two ozone applications for three months. (H&E x200)	121
19b	A photomicrograph showing alveolar bone (B), periodontal ligament (P) and cementum (C) of diabetic rat which received two ozone applications for three months. (H&E x200)	121
20a	A photomicrograph of the gingiva of diabetic rat which received three ozone applications for three months. (H&E x200)	123
20b	A photomicrograph showing alveolar bone (B), periodontal ligament (P) and cementum (C) of diabetic rat which received three ozone applications for three months. (H&E x100)	123
21a	A photomicrograph of the gingiva of diabetic rat which received one ozone application for six months. (H&E x200)	125
21b	A photomicrograph showing periodontal ligament (P) of diabetic rat which received one ozone application for six months. (H&E x200)	125
22a	A photomicrograph of the gingiva of diabetic rat which received two ozone applications for six months. (H&E x200)	127
22b	A photomicrograph showing periodontal ligament (P) of diabetic rat which received two ozone applications for six months. (H&E x200)	127
23a	A photomicrograph of the gingiva of diabetic rat which received three ozone applications for six months. (H&E x200)	129
23b	A photomicrograph showing periodontal ligament (P) of diabetic rat which received three ozone applications for 6 months.(H&E x200)	129
24	The histogram of DNA content measurements in control normal non-diabetic group. This group did not receive any ozone application.	131
25	The histogram of DNA content measurements in normal non- diabetic group. This group received one ozone application for one month.	132
26	The histogram of DNA content measurements in normal non- diabetic group. This group received two ozone applications for one month.	133
27	The histogram of DNA content measurements in normal non-diabetic group. This group received three ozone applications for one month.	134
28	The histogram of DNA content measurements in normal non- diabetic group. This group received one ozone application for three months.	135
29	The histogram of DNA content measurements in normal non- diabetic group. This group received two ozone applications for three months.	136
30	The histogram of DNA content measurements in normal non- diabetic group. This group received three ozone applications for three months.	137
31	The histogram of DNA content measurements in normal non- diabetic group. This group received one ozone application for six months.	138
32	The histogram of DNA content measurements in normal non- diabetic group. This group received two ozone applications for six months.	139

33	The histogram of DNA content measurements in normal non- diabetic group. This group received three ozone applications for six months.	140
34	The histogram of DNA content measurements in control diabetic group. This group did not receive any ozone application.	141
35	The histogram of DNA content measurements in diabetic group. This group received one ozone application for one month.	142
36	The histogram of DNA content measurements in diabetic group. This group received two ozone applications for one month.	143
37	The histogram of DNA content measurements in diabetic group. This group received three ozone applications for one month.	144
38	The histogram of DNA content measurements in diabetic group. This group received one ozone application for three months.	145
39	The histogram of DNA content measurements in diabetic group. This group received two ozone applications for three months.	146
40	The histogram of DNA content measurements in diabetic group. This group received three ozone applications for three months.	147
41	The histogram of DNA content measurements in diabetic group. This group received one ozone application for six months.	148
42	The histogram of DNA content measurements in diabetic group. This group received two ozone applications for six months.	149
43	The histogram of DNA content measurements in diabetic group. This group received three ozone applications for six months.	150
