ECOLOGICAL AND GENETIC FACTORS INFLUENCING AUTISTIC CHILDREN

Submitted By

Hend Abd El-Aal Ahmed

B.Sc. of Veterinary Science, Faculty of Veterinary Medicine,
Cairo University, 1985

Master in Environmental Sciences, Institute of Environmental Studies
and Research, Ain Shams University, 1997

A thesis submitted in Partial Fulfillment
Of
The Requirement for the Doctor of Philosophy Degree
In
Environmental Sciences
Department of Environmental Medical Sciences

Under The Supervision of:

1- Prof. Dr. Mohamed Abd El Adl Elsayy

Prof. in Pediatric Department and Genetic Unit
Faculty of Medicine
Ain Shams University

2- Prof. Dr. Mohamed Ibrahim Eid

Prof. of Mental Health
Faculty of Education
Ain Shams University

3- Dr. Mahmoud Lotfy Sakr

Assistant Prof. of Clinical Toxicology
Faculty of Medicine
Ain Shams University

4- Dr. Osama Kamal Zaki

Consultant of Medical Genetics
Director of Medical Genetic Unit
Ain Shams University Hospitals

2016

Acknowledgement

I would like to express my immense gratitude and appreciation to my father (may God save his soul) and my mother for encouraging me to reach this degree of successes in my life.

Great and extreme gratitude to my kind supervisor **Professor Dr. Mohamed Abd El Adl El Sawy** (Professor in Pediatric Department) for his guidance in planning this study.

It is a great pleasure to express my deepest thanks to **Professor Dr. Mohamed Ibrahim Eid** (Professor of Mental Health) for his great support and help.

My sincere thanks and extreme gratitude to my kind **Professor Dr. Mahmoud Lotfy Sakr** (Professor of Clinical Toxicology) for his guidance, his patience, skillful and helpful encouragement and for his endless persistent support and expert keen supervision.

Sincere and deepest thanks to **Doctor Osama Kamal Zaki** (Consultant of Medical genetics) for his sincere help and continuous guidance throughout the study and his great support and help.

I am also indebted to all my colleagues involved in this study for their marvelous efforts in the completion of this thesis.

Last and not least I also offer my thanks to all technicians who helped me doing the practical part of this study.

Deep appreciation is expressed to my husband Professor **Dr. Abd El-Raouf El Feki** (Professor of Curriculum and Methodology), Faculty of Education – Tanta University and my sons (**Mohamed and Ahmed**) and my daughters (**Heba and Dina**) for their patience and their continuous support throughout the study.

Great appreciation to my brother **Dr. Khaled Abd El Aal** (Specialist in Medicine and heart disease) and his helpful wife **Mrs. Enas** for their great help, encouraging and their continuous support.

May God bless all of them and this work.

Aim of the Work

Aim of the study

The aim of this work is to find out the influences of some environmental factors and genetic factors on the development of autism on some Egyptian children.

Abstract

Abstract

1- Background:

Autism is a complex neurodevelopmental disorder defined by impaired social interaction, communication, deficits, restricted interests and repetitive behavioral patterns.

There are probably many combinations of genes and environmental factors that contribute to the constellation of autistic traits.

2- Patients and Methods:

This study was carried out on patients following up at the Medical genetic center, Ain Shams University Hospitals.

- The study was conducted on about (52) Autistic patients, age ranging from (3-12) years both males and females were included.
- Group of relatives consists of available (mother, grandparents) whom are apparently healthy individuals, but most of them showed a history of medical, neurological and psychiatric disorders as noticed throughout the pedigree construction test.
- Control group about (42) patients, was selected from apparently healthy individuals with no history suggesting medical, neurological or psychiatric disorders with ages ranging between (3-12) years.
- The cases and controls were subjected to history taking sheet that include age, family history of other autistic patients, birth difficulties, birth place and medications received.
- They were also exposed to pedigree construction and findings showed cases with autistic behaviour and psychic disorders.
- Diagnosed cases with Autism were subjected to (CARS) (Child Autism Rating Scale) test which showed significant cases.
- Also the experimental group under study of (autistic children) were subjected to the following investigations:

1- DNA analysis:

In which (DNA) samples were taken from peripheral lymphocytes to undergo (DNA) extraction and the:

* ***Glutathione-s-transferase test:***

Which was genotyped by polymerase chain reaction (PCR) in which its absence was found in some studied cases.

2- Heavy Metals test:

Including (lead and Mercury) it was detected by the atomic absorption apparatus in blood of studied cases of children which showed non significance in both detected metals (lead & mercury).

3- Pseudocholine esterase test:

Was measured in blood of autistic cases revealing non significance.

* **Results and Conclusion:**

Increased exposure to some parameters measured above showed no evidences of significance.
