

Effect of Resveratrol and Lycopene on Laryngeal Carcinoma Cell Line

*Thesis submitted for the partial fulfillment of requirements of
the Doctor of philosophy degree (PhD) in Oral Pathology*

By

Ismail Mohamed Shebl

B.D.S (Faculty of Dentistry, Misr International University, 2006)
M.Sc. (Faculty of Oral and Dental Medicine, Cairo University, 2013)
Assistant Lecturer of Oral Pathology, Misr International University

Supervisors

Dr. Iman Mohamed Helmy

Professor of Oral Pathology
Faculty of Dentistry, Ain Shams University

Dr. Marwa Mokbel Elshafei

Professor and Head of Oral Histopathology Department
Faculty of Dentistry, Misr International University

Dr. Marwa Matboly Sayed

Lecturer of Biochemistry and Molecular Biology
Ain Shams Faculty of Medicine, Armed Forces College of Medicine

Dr. Ali Fahmy Mohamed

Head of Research and Development sector, the holding company for
production of vaccines and sera (Vacsera)

Faculty of Dentistry
Ain Shams University

2018

Acknowledgment

It's a great pleasure to acknowledge my immense appreciation and recognition to **Dr. Iman Mohamed Helmy**, Professor of Oral Pathology, Faculty of Dentistry, Ain Shams University, for her tremendous effort and guidance throughout this work. Thank you for your patience and continuous support. It was a great honor to work under your supervision.

I am especially indebted to **Dr. Marwa Mokbel Elshafei**, Professor and head of the Oral Histopathology department, Faculty of Dentistry, Misr International University for her everlasting support and care, not only through the research, but throughout my entire academic career. Her patience, motivation and knowledge helped me at all times. I could not have imagined having a better advisor and mentor.

I would like to express my deepest gratitude to **Dr. Marwa Matboly Sayed**, Lecturer of Biochemistry and Molecular Biology, Ain Shams Faculty of Medicine, Armed Forces College of Medicine, for generously sharing her vast knowledge, and for her remarkable efforts during the whole course of this study.

My deepest appreciation to **Dr. Ali Fahmy Mohamed**, Head of Research and Development sector, the holding company for production of vaccines and sera (Vacsera), for his help and support during the practical part of this study.

I would like to thank the entire staff of the Oral Pathology Department, Faculty of Dentistry, Ain Shams University for their continuous cooperation and guidance during the past years.

Special thanks and appreciation to my colleagues at the Oral Histopathology Department, Misr International University for their continuous encouragement and help.

Finally, I would like to express my sincere gratitude to Misr International University, and **Prof. Farida El Rashidi**, vice president of board of trustees, for their generous assistance and support by all means to complete this work.

Dedication

This work is dedicated to my parents, who gave me the good examples and taught me to work hard for the things that I aspire to achieve.

This thesis is also dedicated to my lovely wife and children, who have been a constant source of support during the challenges of life. I am truly grateful for having you in my life.

Finally, this thesis is also dedicated to my brothers for continuously backing me up.

List of Contents

List of Figures	i
List of Tables	iii
List of Abbreviations	iv
Introduction	1
Review of literature	3
I Head and Neck Cancer	3
II Role of Cell Death in Cancer	4
III Types of Cell Death	5
IV Autophagy	6
V Autophagy and Apoptosis relationship	18
VI Autophagy and miRNA	22
VII miRNA	23
VIII Phytochemicals and Cancer	30
IX Resveratrol	30
X Lycopene	35
Aim of the Study	39
Material and Methods	40
I Apportionment of the study groups	40
II Material used in cell culture	40
III Cell culture maintenance	42
IV Treatment of HEp-2 cells with Resveratrol	43
V Treatment of HEp-2 cells with Lycopene	43
VI Treatment of HEp-2 cells with combined Resveratrol and Lycopene mixture	44
VII MTT assay	44
VIII Preparation of miRNA inhibitor	45

IX	Preparation of miRNA inhibitor negative control	45
X	Selection of the candidate miRNA	46
XI	Statistical analysis	62
Results		64
I	MTT assay results	64
	A) Control group	64
	B) Resveratrol groups	65
	C) Lycopene groups	67
	D) Combination groups	69
	E) miRNA inhibitor	71
	F) miRNA inhibitor negative control	71
II	PCR findings	72
	A) miRNA-20a	72
	B) SQSTM1	73
III	Statistical analysis	75
	A) MTT assay results	75
	B) PCR results	79
Discussion		85
Conclusion		96
Recommendations		97
Summary		98

Table 7	Cell viability % in different groups after being treated for both 24 and 48 hours	72
Table 8	Mean fold change of miRNA-20a in different HEp-2 groups	73
Table 9	Mean fold change of SQSTM1 in different HEp-2 groups	74
Table 10	ANOVA test for comparison between viability% of the different drugs after 24 hours.....	76
Table 11	ANOVA test for comparison between viability% of the different drugs after 48 hours.....	77
Table 12	ANOVA test for viability % of different groups at different time intervals.....	78
Table 13	ANOVA for miRNA-20a fold change of different groups, followed by Post-Hoc test.....	80
Table 14	Results of Pearson's correlation for the correlation between miRNA-20a and viability %	81

Table 15	ANOVA test for comparison between fold changes of SQSTM1 in the different groups.....	82
Table 16	Results of Pearson's correlation for the correlation between miRNA-20a and of SQSTM1.....	84

List of Abbreviations

ACD	Accidental cell death
AMPK	AMP-activated protein kinase
ANOVA	Analysis of variance
ATG	Autophagy related genes
BAD	BCL2 associated agonist of cell death
BAX	BCL2 associated x protein
BCL2	B-cell lymphoma 2
BH3	Bcl-2 homology
BECN1	Beclin-1
Bif-1	Bax-interacting factor
cDNA	Complementary DNA
CD4	Cluster of differentiation 4
CMA	Chaperone mediated autophagy
COPD	Chronic obstructive pulmonary disease
COX-1	Cyclooxygenase-1
CVD	Cardiovascular disease
DAPK	Death-associated protein kinase
$\Delta\Delta CT$	Delta, cycle threshold
DNA	Deoxyribonucleic acid
DMSO	Dimethyl sulfoxide
DRAM	Death-regulated autophagy modulator
dT	Deoxythymine
E-MEM	Eagle's minimum essential medium
EDTA	Ethylene-Diamine-Tetra-Acetic acid
FBS	Foetal bovine serum
FLIP	Fllice inhibitory protein
HCV	Hepatitis C virus

HDL	High density lipoprotein
HEp-2	Human epithelial type-2
HNC	Head and neck cancer
HPLC	Highly purified liquid chromatography
HSV-1	Herpes simplex virus type-1
IC50	Inhibitory concentration 50%
IL	Interleukin
LAMP2	Lysosome-associated membrane protein-2
LC3	Light chain protein-3
LIR	LC3-interacting region
Lkb1	Liver kinase b1
MCL1	Myeloid leukemia cell differentiation protein
MCF	Methane conversion factor
MHC	Major histocompatibility complex
miRNA	Micro RNA
MICA	Major histocompatibility complex class I chain-related proteins A
MICB	Major histocompatibility complex class I chain-related proteins B
μl	Micro litre
μm	Micro mole
MMPs	Matrix metalloproteinases
MP	Matrix protein
mRNA	Messenger RNA
mTOR	Mammalian TOR
MTT	Methyl thiazol tetrazolium
NCCD	Nomenclature committee on cell death
OD	Optical density
OSCC	Oral squamous cell carcinoma

Parkin	Parkinson protein-2
PBS	Phosphate buffer saline
PCD	Programmed cell death
PCNA	Proliferating cell nuclear antigen
PCR	Polymerase chain reaction
PI3k	Phosphatidylinositol-3 kinase
PINK1	Induced putative kinase 1
PKB	Protein kinase B
PRAS40	Proline-rich AKT substrate-40
PTEN	Phosphate and tensin homologue
q-PCR	Real time quantitative polymerase chain reaction
RCD	Regulated cell death
RISC	RNA induced silencing complex
RNA	Ribonucleic acid
ROS	Reactive oxygen species
SCC	Squamous cell carcinoma
SD	Standard deviation
SMURF1	Smad ubiquitination related factor 1
SNPs	Single nucleotide polymorphism
SPSS	Statistical package for the social sciences
SQSTM1	Sequestome 1
SYBR	Synergy brands
TIMPs	Tissue inhibitor of metalloproteinase proteins
T_m	Temperature of Melting
TOR	Target of rapamycin
UTR	Untranslated region
UVRAG	Ultraviolet Resistance Associated Gene
WHO	World health organization
