

Traditional and Color M-Mode Parameters of Left Ventricular Diastolic Function During Low-Dose Dobutamine Stress Echocardiography: Relations to Contractility Reserve

Thesis

Submitted in partial fulfillment of the requirement of
Master degree in cardiology

BY

Ahmed Hamed Mohamed El-Gohary
M.B.B.Ch.,

Under supervision of

Professor. Azza Abdallah El-Fiky

*Professor of cardiology
Faculty of medicine
Ain shams university*

Doctor. Walaa Adel Abdel Halim

*Assistant professor of cardiology
Faculty of medicine
Ain shams university*

Doctor. Sherif Mansour Soliman

*Lecturer of cardiology
Faculty of medicine
Ain shams university*

*Faculty of medicine

TABLE OF CONTENTS

List of figures.....	III
List of tables	VI
List of abbreviation.....	VII
Introduction.....	1
Aim of work.....	3
Chapter 1: Assessment of diastolic function	5
Definition of Diastole and Diastolic dysfunction:	5
Pathophysiology:	6
Evaluation of diastolic function by Echocardiograph:	12
chapter 2: Color m-mode flow propagation velocity	27
Colour M-mode Doppler data acquisition and processing:	27
Pressure and flow propagation: fluid dynamics and patho-physiology	32
Hemodynamic determinants of velocity propagation:	37
Clinical use of color M-mode Doppler	40
Limitations of FPV as a preload independent index for relaxation	43
Chapter 3: Viability assessment by Dobutamine stress echocardiography	49
Dobutamine Stress Echocardiography:.....	49
Contractility reserve:.....	53
Patients and Methods.....	65
Population:	65
Echocardiographic assessment:	65
Statistical analysis:.....	72
Result	73
Demographic Data:	73
Risk factors:	73
Echocardiographic parameters of the heart:	76
Diastolic parameters of the heart	78
Correlation of WMSI with different echocardiographic features:	80
Correlation of EF with diastolic parameters of LV function:	84
Subgroup analysis by the presence of myocardial viability:	88

Discussion	103
Summery and Conclusion.....	111
Recommendations	115
References	117
Arabic summery.....	-

LIST OF FIGURES

Figure 1: mechanical events in the cardiac cycle	6
Figure 2: Cardiac Cycle	7
Figure 3: Diastolic function classification scheme.	13
Figure 4: Mitral inflow velocity	16
Figure 5: Mitral inflow pattern of diastolic fuction Pseudonormal filling.	17
Figure 6: Mitral inflow Doppler waveforms in diastolic dysfunction.	17
Figure 7: Mitral inflow pattern variation with changing AV intervals.....	20
Figure 8: Isovolumetric relaxation time (IVRT)	21
Figure 9: schematic representation of the calculation of the myocardial performance index (MPI).	23
Figure 10: Tissue Doppler imaging (DTI).	26
Figure 11: Color M-mode propagation velocities.....	28
Figure 12: Color M-mode Doppler recording of FPV according to Stugaard et al.	30
Figure 13: Representative examples of color M-mode recordings.....	31
Figure 14: Measurement of propagation velocities from color M-mode Doppler images.	31
Figure 15: Representative pressure curves during diastole.....	33
Figure 16: Representative example of a colour M-mode image of left ventricular inflow, using Garcia's method.	34
Figure 17: Mitral inflow Doppler patterns and the corresponding color M-mode images at different stages of diastolic dysfunction.	41
Figure 18: left ventricular outflow tract gradient during dobutamine stress.....	51
Figure 19: The relationship of management and survival among viability	56
Figure 20: sixteen segment model of WMSI and Coronary artery territories.	58
