Acknowledgement

*I would like to express my sincere thanks and appreciation to **Prof. Dr. Ismail Sadek Ismail**, Professor of Pediatrics, Faculty of Medicine, Ain-Shams University, for his magnificent encouragement and useful comments throughout this study.*

*I wish to express my deepest gratitude to **Prof. Dr. Mostafa Abd El-Aziz El-Hodhod**, Professor of Pediatrics, Faculty of Medicine, Ain-Shams University, who kindly offered much of his time for providing me with precious guidance, which is beyond acknowledgment. I wish to thank him for his cardinal support during planning and throughout this study.*

*I would like to express my sincere thanks to **Prof. Dr. Karim Yehia Shaheen**, Assist. Professor of Clinical Pathology, Faculty of Medicine, Ain-Shams University, who offered me much of his time and experience with helpful advice. I record my appreciation to his Nobel character.*

*I express my deepest gratitude to **Prof. Dr. Rehab Abd El-Kader Mahmoud**, Assist. Professor in Medical studies Department, Institute of Childhood Studies, Ain-Shams University, who offered me much of her guidance. She provided me great help, generous and proper support, suggestions throughout this work.*

I should also express my deep gratitude to all the staff members, my colleagues and to every person in the NICU Department, Children's Hospital, Ain-Shams University, for their continuous support, cooperation and help.

Mona Monis

LIST OF ABBREVIATIONS

| | |
|-------------------|---|
| Cl^- | Chloride Ion |
| OCl^- | Hypochlorous Anion |
| O_2^{\bullet} | Singlet Oxygen |
| $O_2^{\bullet -}$ | Superoxide Radical |
| $ONOO^-$ | Peroxynitrite |
| C D | Clostridium Defficile |
| C=C | Carbon-Carbon Double Bond |
| CCS | Copper Chaperone for Superoxide Dismutase |
| Cu/Zn SOD | Copper Zinc Superoxide Dismutase |
| ECMO | Extracorporeal Membrane Oxygenation |
| ecSOD | Extracellular SOD |
| EGA | Estimated Gestational Age |
| ELISA | Enzyme-linked Immunosorbant Assay |
| ET | Endotracheal Tube |
| ETEC | Enterotoxigenic E. coli |
| FHM | Fortified Human Milk |
| G-CSF | Granulocyte Colony-Stimulating Factor |
| GPX | Glutathione Peroxidase |
| GSH | Glutathione |

| | |
|-----------------------|--|
| GSSG | Oxidized Glutathione |
| GSSG-R | Glutathione Reductase |
| H/R | Hypoxia Reoxygenation |
| HCT% | Hematocrit Percentage |
| HDP | Hydroperoxide |
| HNE | Hydroxide Alkenals (4-hydroxy-nonenal) |
| HOCL | Hypochlorous Acid |
| I/R | Ischemia/ Reperfusion |
| IL | Interleukin |
| L^{\bullet} | Carbon Radical |
| LH | Target PUFA |
| LOH | Fatty Acid Alcohol |
| LOO^{\bullet} | Lipid Peroxyl Radical |
| LOOH | Lipid Hydroperoxide |
| LOOL | Lipid Alkoxyl |
| MAOIs | Monamine Oxidase Inhibitors |
| MCH | Mean Corpuscular Hemoglobin |
| MCHC Concentration | Mean Corpuscular Hemoglobin |
| MCV | Mean Corpuscular Volume |
| MDA | Malondialdehyde |
| Mn SOD | Manganese Superoxide Dismutase |

| | |
|---------------------|--------------------------------|
| NEC | Nectrotizing Enterocolitis |
| NO^\bullet | Nitric Oxide |
| NO_2 | Nitrogen dioxide |
| NOS^{-2} | Nitric Oxide Synthase |
| NPO | Nulla Per Os |
| NTYR | Nitrotyrosine |
| $\text{O}=\text{O}$ | Oxygen – Oxygen Double Bond |
| OFR | Oxygen Free Radicals |
| OH^\bullet | Hydroxyl Radical |
| ONOOH | Peroxynitrous Acid |
| PAF | Platelet Activating Factor |
| PAV | Postero-Anterior View |
| Plase A_2 | Phospholipase A_2 |
| Plase A_2 | Phospholipase A_2 |
| PLOOH | Phospholipid Hydroperoxide |
| PLOOH | Phospholipid Hydroperoxides |
| PO | Per Os |
| PPM | Part per million |
| PROM | Premature Rupture of Membranes |
| PUFA | Poly-Unsaturated Fatty Acids |
| R | Initiating Radical |

| | |

Abstract

Necrotizing entero-colitis (NEC), a neonatal disease that primarily affects preterm infants is known to be associated with a high mortality rate and is of unknown etiology. Yet, ischemia-reperfusion appears to be an important contributing factor; also oxygen free-radicals produced during reperfusion most-likely contribute to the injury. So, further studies are needed to elucidate whether disruption of the normally high protective levels of SOD in pre-term infants could lead to NEC. This study included; 30 pre-term neonates and ten healthy controls. Their mean gestational age was 32 ± 2 weeks. The 30 pre-term patients were further classified into three groups according to Modified Bell-Staging Criteria for NEC: 8 of them had suspected NEC, 15 had proven NEC, and 7 had advanced NEC. The controls were 10 healthy pre-term neonates free of any major disease. The present study revealed that socio-economic status of the studied patients was below average in 50% in comparison to 20% in the controls. Mean SOD and GPX levels were significantly lower ($P<0.01$) in patients (275Unit/ml, and 4458U/L; respectively), compared to (519Unit/ ml, and 7783U/L; respectively) in the controls. Both anti-oxidant enzymes activity was lower among patients having bad prognostic parameters especially SOD. The natural levels of the antioxidant enzymes (SOD/ GPX), especially SOD were deficient in cases with NEC compared to the controls. This deficiency correlates with the severity of the disease.

Environmental determinants of perinatal insults such as antenatal care, maternal problems and socioeconomic status were also done and 50% of the patients were in the below average, 43.3% were average and 6.7% were above average. Multiple pregnancies represented one third of the patients compared to 0% among controls. Antenatal care was
