

ADHD Symptoms: Relation to Levels of Omega-3 Fatty Acids

Thesis

Submitted for partial fulfillment of MD. Degree in Psychiatry

Presented by

Haytham Mohamed Mohamed Hassan
M.B., B.Ch., M.Sc.

Supervised by

Prof. Dr. Safeya Mahmoud Effat
Professor of Neuropsychiatry
Faculty of Medicine-Ain Shams University

Prof. Dr. Nagwa Abdel Meguid Mohamed
Professor of Genetics
National Research Center

Dr. Hanan Hussein Ahmed
Assistant Professor of Neuropsychiatry
Faculty of Medicine-Ain Shams University

Dr. Hanan Ezz El-Din Azzam
Assistant Professor of Neuropsychiatry
Faculty of Medicine-Ain Shams University

Dr. Amr Sobhi Gouda
Assistant Professor of Biochemistry
National Research Center

Faculty of Medicine
Ain Shams University

2012

Acknowledgement

Words can never express my deepest gratitude and indebtedness to *Professor Safeya Effat*, Professor of Neuropsychiatry, Faculty of Medicine, Ain Shams University. I owe her very much for her meticulous supervision, continuous guidance and gentle encouragement. I am truly thankful to her; she gave much time and attention to this work to be accomplished that way.

I would like to express my thanks and admiration to *Professor Nagwa Abdel Meguid*, Professor of Human Genetics, National Research Center for her tremendous support, precious advice, provision of precious literatures and for her extreme knowledge and interest that made this work possible.

I am extremely grateful to *Dr. Hanan Hussein*, Assistant Professor of Neuropsychiatry, Faculty of Medicine, Ain-Shams University for her constructive guidance, her meticulous revision and sharing the vision of this work that helped formulating it in its final form.

I am profoundly grateful to *Dr. Hanan Azzam*, Assistant Professor of Neuropsychiatry, Faculty of Medicine, Ain Shams University her constant support and guidance that helped me in overcoming many obstacles during this work to make it finally see the day light.

I would like to express my thanks to *Dr. Amr Sobhi*, Assistant Professor of Biochemistry, National Research Center for his intensive support and faithful cooperation which were indispensable to complete this work.

I would like to express my thanks to *Mr. Abdel Gawad Khalifa*, Clinical Psychologist, Institute of Psychiatry, Ain Shams University for his valuable help in conducting the psychometric assessments of this thesis.

Without my professors and colleagues, this work would not have come to reality, I am really thankful to all of them especially to *Dr. Mona Anwar*, Assistant Professor of Biochemistry, National Research Center, *Dr. Mostafa Bastway*, Lecturer of Neuropsychiatry, Misr for Science and Technology University, *Dr. Nesreen Mohsen*, Lecturer of Neuropsychiatry, Ain-Shams University and *Dr. Rehab*

Osama, Lecturer of Biochemistry, National Research Center.

Finally, I cannot forget the kind help, valuable cooperation and limitless support of my dear beloved family; I really owe them a lot.

Introduction

Attention deficit hyperactivity disorder (ADHD) is characterized by pervasive and impairing symptoms of inattention, hyperactivity and impulsivity according to DSM-IV (*American Psychiatric Association, 1994*). The World Health Organization (WHO) uses a different name—hyperkinetic disorder (HD)—but lists similar operational criteria for the disorder (*World Health Organization, 1993*). Regardless of the name used, ADHD/HD is one of the most thoroughly researched disorders in medicine.

Epidemiological studies indicate that ADHD is a prevalent disorder affecting 5.3% of children worldwide (*National collaborating centre for mental health, 2009*). In USA current prevalence estimates for childhood ADHD range from 5% to 8%, while in Europe it is significantly lower than this range (*Timimi and Taylor, 2004*). This range is higher in Arabian countries reaching 9.4% in Egypt (*El Missiry et al., 2007*), 9.4% in Qatar (*Bener et al., 2006*) and up to 44% in Saudi Arabia among primary school children (*Al Hamed et al., 2008*).
