2009**

## **ABSTRACT**

### **BACKGROUND:**

Hepatocellular carcinoma is currently considered the leading cause of death amongst cirrhotic patients. Needle core biopsy (NCB) has been the standard procedure for histopathological diagnosis of focal hepatic lesions. In recent years, fine needle aspiration cytology (FNAC) has emerged as a minimally invasive and relatively inexpensive method of pathological evaluation of primary or metastatic hepatic masses. It can also provide rapid on-site diagnosis.

### **OBJECTIVE:**

The aim of this study was to compare the accuracy of FNAC of focal hepatic lesions using rapid and routine cytological stains versus routine histopathology.

### **METHODS:**

The study included 30 patients, who had focal hepatic lesions detected by Ultrasound and/or triphasic CT, in non cirrhotic or in child A or B cirrhotic patients. Biopsy together with FNAC were taken from each case. Some FNAC smears were used for bed site cytological examination with rapid stain equivalent to Rapi-Diff II stain. Others were used for routine cytology with papanicolaou stain, while core biopsies were preserved in 10% formaldehyde and sent for histopathological examination.

### **RESULTS:**

The specificity, sensitivity, positive and negative predictive value of FNAC with routine stains when compared to histopathological examination were 100%, 85.7%, 100%, and 33.3% respectively, while the specificity, sensitivity, positive and negative predictive value of rapid cytology when compared to histopathological examination were 100%, 82.1 %, 100%, and 28.6% respectively, and specificity, sensitivity, positive and negative predictive value of rapid cytology when compared to routine cytological examination were 100%, 95.8%, 100%, and 85.7% respectively

**Key words:** HCC, Core biopsy, FNAC, rapid cytology.

## **ACKNOWLEDGEMENT**

I feel always indebted to "**GOD**" the kindest and the most merciful.

It was an honor to work under the supervision of eminent professors:

**PROF. DR. NABIL EL-KADY**

**PROF. DR. IMAN RAMZY**

**PROF. DR. HANY KHATTAB**

**DR. DALIA OMRAN**

Who lent me their whole hearted support and immense facilities as is their usual with their candidates. To them, I owe more than I can record.

I pray to "God" to surround them with his blessing, protection, and to give them by his mercy the best .

I am greatly honored to express my deep gratitude and faithfulness to **PROF. DR. NABIL EL-KADY**, Professor of Endemic Medicine, Cairo University; he gave me the idea of the study, and carried out the whole practical work of cases with devoted comprehensive technical help through out the work, meticulous invaluable advice and support that cannot be expressed in words .

I am extremely grateful to the eminent **PROF. DR. IMAN RAMZY**, Professor of Endemic Medicine , Cairo University , for her choice of me for this work, for her sincere guidance and support. She gave me much of her experience, meticulous invaluable advice and support that can't be expressed in words. To her therefore, I express my deep sense of gratitude.

I wish to express my gratitude and appreciation to **PROF.DR.HANY KHATTAB**, Prof. of pathology department, Cairo University, for his great help, faithful advices, kind support from the start and all through the work until its completion, and immense facilities he offered.

I wish to thank **DR. DALIA OMRAN** for her generous help and goodness, meticulous revisions all through the work. She gave me much of her time, experience and support. Her valuable comments, efforts and collaboration were the causes to complete this work properly.

I would like to thank **DR.DALIA IBRAHIM**, Assistant Professor of community medicine; Cairo university, who did the statistical analysis of this study with much patience, faithfulness and devotion.

I would like to express my sincere thanks and deepest appreciation to the head of the department, **PROF.DR.MAHASEN ABD ALRAHMAN**, all eminent professors, staff members, and my colleagues and friends in Endemic Medicine Department.

And for those who filled this work with life, the patients, many thanks for the co-operation they have shown. I hope that with this and with other studies we can alleviate their sufferings.

Last but not least, allow me to send my deepest gratitude, my great appreciation & sincere thanks to my great family, my father, mother, husband, sister and brother, for their sacrifice in order to make me stand where I am today.
