

Microbial biosynthesis of silver nanoparticles and their antimicrobial activity

M. Sc. Thesis

Microbiology Department- Faculty of Science

Ain-Shams University

By

Omnia Mohammed Abdulla Ahmed

(B.Sc. in Microbiology/chemistry, 2011)

Supervisors

Prof. Mostafa Mohamed Hassan Khalil

*Professor of Chemistry
Chemistry Department,
Faculty of Science,
Ain Shams University*

Dr. Khaled Zakaria El-Baghdady

*Associate Professor of Microbiology
Microbiology Department,
Faculty of Science,
Ain Shams University*

Dr. Einas Hamed El-Shatoury

*Associate Professor of Microbiology
Microbiology Department,
Faculty of Science,
Ain Shams University*

Microbiology Department,
Faculty of Science,
Ain Shams University.

2015

Microbial biosynthesis of silver nanoparticles and their antimicrobial activity

By

Omnia Mohammed Abdulla Ahmed
(B.Sc. in Microbiology/Chemistry, 2011)
Ain- Shams University

A thesis

Submitted to Department of Microbiology

Faculty of Science

Ain-Shams University

For the Master Degree of Science

Microbiology

(2015)

M.Sc. Thesis

Name: Omnia Mohammed Abdulla Ahmed

Title: Microbial biosynthesis of silver nanoparticles and their antimicrobial activity

Thesis Supervisors

Supervisors

Prof. Mostafa Mohamed Hassan Khalil

*Professor of Chemistry, Head of Central Laboratory,
Chemistry Department, Faculty of Science, Ain Shams University.*

Dr. Khaled Zakaria El-Baghdady

*Associate Professor of Microbiology, Microbiology Department,
Faculty of Science, Ain Shams University*

Dr. Einas Hamed El-Shatoury

*Associate Professor of Microbiology, Microbiology Department,
Faculty of Science, Ain Shams University*

Approval sheet

Microbial biosynthesis of silver nanoparticles and their antimicrobial activity

By

Omnia Mohammed Abdulla Ahmed

(B.Sc. in Microbiology/chemistry, 2011)

Supervisors

Approved

Prof. Mostafa Mohamed Hassan Khalil

Professor of Chemistry, Head of Central Laboratory,
Chemistry Department, Faculty of Science, Ain Shams University.

Dr. Khaled Zakaria El-Baghdady

Associate Professor of Microbiology, Microbiology Department,
Faculty of Science, Ain Shams University

Dr. Einas Hamed El-Shatoury

Associate Professor of Microbiology, Microbiology Department,
Faculty of Science, Ain Shams University

Examination committee

Prof. Hala Abdallah Farrag

Professor of Microbiology, Egyptian Atomic Energy Authority (EAEA)

Prof. Khaled Ibrahim El Nagar

Professor of Chemistry, National Institute of Standards (NIS)

Prof. Mostafa Mohamed Hassan Khalil

Professor of Chemistry, Head of central laboratory, Chemistry Department,
Faculty of Science, Ain Shams University.

Dr. Khaled Zakaria El-Baghdady

Associate Professor of Microbiology, Microbiology Department,
Faculty of Science, Ain Shams University

Approval date /8/2015

university council approved / /2015

Acknowledgments

*First and foremost, I must acknowledge my infinite thanks to **God the almighty**, for his help and bless.*

*To **Dr. Mostafa M. H. Khalil**, I am immensely appreciative to your patient support and valuable supervision and guiding.*

*I owe deep debt of gratitude to **Dr. Eínas El-Shatoury** for her continuous support and encouragement. She taught me a great deal about both scientific research and life in general.*

***Dr. Khaled Zakaria El-Baghdady**, words would not be enough to express how grateful I am for your guidance and management that brought this work towards a completion.*

*Special profound gratitude goes to **Dr. Sahar Tolba** for her generous contribution through the whole work.*

*I would like to extend thanks to the **Research & Training Center on Vectors of Diseases** Ain Shams University, especially **Dr. Hanan Helmy** and **Dr Abeer El Gizawy** who worked actively to provide me with a place to work in and moral support to pursue this project.*

*I would like to take this opportunity to convey warm thanks to **Dr. Mohamed Sherif Kotb** for his support and motivation.*

*This project would not have been possible without the support of **my father, mother, sisters and brothers** to whom I am greatly indebted. Also Special thanks goes to my best friend **Esraa Gamal** for supporting me throughout this journey.*

*Special thanks go to the members and head of the **Microbiology Department**, Faculty of Science, Ain Shams University.*

Omnia Mohamed Abdulla Ahmed

Declaration

This thesis has not been submitted previously for this or other degree in this or any other university.

Abstract.....	1
Introduction.....	3
Aim of work.....	5
Review of literature	6
1.1 Brief history of nanotechnology	6
1.2 Properties of nanoparticles	7
1.3 Shapes and forms of nanomaterial	9
1.4 Methods of synthesis of AgNPs	9
1.4.1 Main strategies.....	9
1.4.1.1 top-down.....	9
1.4.1.2 Bottom-up.....	9
1.4.2 Chemical methods	10
1.4.2.1 The sol-gel method.....	11
1.4.2.2 Colloidal method.....	12

1.4.3 Physical methods	12
1.4.3.1 Laser ablation method	12
1.4.3.2 Hydrothermal method	13
1.4.4 Biological biosynthesis	13
1.5 Silver nanoparticles applications	19
1.6 Toxicity of silver nanoparticles	22
1.7 Characterization of silver nanoparticles	22
1.7.1 UV-Visible Spectrometry	23
1.7.2 X-ray diffraction (XRD)	23
1.7.3 Fourier Transform Infrared (FTIR)	24
1.7.4 Dynamic light scattering (DLS)	24
1.7.5 Transmission Electron Microscope (TEM)	24
1.8 Mechanisms for silver nanoparticles synthesis	25
1.9 Mechanisms of antimicrobial activity of silver nanoparticles	29
Materials and methods	33
2.1 Materials	33
2.1.1 Reagents and buffers	33
2.1.2 Media	34
2.2 Methods	36

2.2.1 Soil samples	36
2.2.2 Isolation of bacteria from soil	36
2.2.3 Preservation and maintenance of the pure bacterial isolates	36
2.2.4 Soil analysis for heavy metals	37
2.2.5 Selective isolation of silver tolerant bacteria	37
2.2.6 Identification of the most tolerant bacterial isolates by 16S rRNA gene sequencing	38
2.2.7 Sequencing of 16S rRNA genes	37
2.2.8 Biosynthesis of silver nanoparticles	40
2.2.9 Characterization of silver nanoparticles	41
2.2.9.1 UV-Vis Spectrometry	41
2.2.9.2 X-ray diffraction (XRD)	41
2.2.9.3 Fourier Transform Infrared Spectroscopy (FTIR)	42
2.2.9.4 Dynamic light scattering (DLS)	42
2.2.9.5 Transmission Electron Microscope (TEM)	43
2.2.10 Optimization of silver nanoparticles production	43
2.2.10.1 Effect of reaction time	44
2.2.10.2 Effect of reaction temperature	44

2.2.10.3 Effect of reaction pH.....	45
2.2.10.4 Effect of different volumes of bacterial cultures.....	46
2.2.10.5 Effect of different concentrations of silver nitrate.....	47
2.2.10.6 The stability of AgNPs.....	47
2.2.11 Antibacterial activity of AgNPs	47
2.2.11.1 Agar well diffusion test.....	48
2.2.11.2 Minimum inhibitory concentration (MIC) of AgNPs.....	49
2.2.11.3 Statistical analysis.....	49
Results	50
3.1 Isolation of bacteria	50
3.2 Soil analysis	50
3.3 Selective isolation of silver tolerant bacteria.....	51
3.4 Microscopic examination of bacterial isolates	54
3.5 Molecular identification of the selected bacterial isolate.....	55
3.6 Biosynthesis of AgNPs.....	56
3.7 Further characterization of synthesized AgNPs	62
3.7.1 X-ray diffraction (XRD).....	62

3.7.2 Fourier Transform Infrared Spectroscopy (FTIR)	65
3.7.3 Dynamic light scattering DLS	68
3.7.4 Transmission Electron Microscope (TEM)	70
3.8 Optimization of AgNPs production	76
3.8.1 Effect of reaction incubation period	73
3.8.2 Effect of reaction temperature	78
3.8.3 Effect of reaction pH	80
3.8.4 Effect of different volumes of bacterial cultures	83
3.8.5 Effect of different AgNO ₃ concentration	85
3.8.5 Stability of AgNPs	90
3.9 Antibacterial activity of AgNPs	89
3.9.1 Agar well diffusion test	89
3.9.2 Minimum inhibitory concentration (MIC) test	94
Discussion	98

List of Tables		
Table No.	Title	Page No.
(1)	List of bacteria that synthesize metal nanoparticles.	15
(2)	List of some fungi that synthesize metal nanoparticles.	17
(3)	List of some yeast that synthesize metal nanoparticles.	18
(4)	List of viruses that synthesize nanoparticles.	19
(5)	Phosphate /Citrate buffer preparation table.	46
(6)	Heavy metal analysis of soil sample.	51
(7)	Tolerance of bacterial isolates to different concentrations of silver nitrate	53
(8)	Gram stain of bacterial isolates.	54
(9)	Antibacterial activity of synthesized AgNPs	89
(10)	Minimum inhibitory concentration (MIC) of AgNPs synthesized by <i>B. cereus</i> Ism37 against tested bacteria.	95
(11)	Minimum inhibitory concentration (MIC) AgNPs synthesized by <i>E. cloacae</i> Ism26 against tested bacteria.	96

LIST OF FIGURES		
Figure No.	Title	Page No.
(1)	Possible mechanism for silver nanoparticles synthesis by <i>Bacillus licheniformis</i> .	26
(2)	Tyrosine reduction and silver nanoparticles formation.	28
(3)	Mechanism for silver ions reduction to silver nanoparticles.	<u>29</u>
(4)	Hypothesis to explain the antibacterial activity of silver nanoparticles (Prabhu and Poullose, 2012).	31
(5)	Representative bacterial isolates on nutrient agar supplemented with AgNO ₃ . A and B represent nutrient agar media supplemented with 2 and 10 mM silver nitrate, respectively.	52
(6)	Effect of dark conditions on AgNPs synthesis by <i>B. cereus</i> Ism37 (A, B) and <i>E. cloacae</i> Ism26 (C, D). Silver nitrate (1 mM) added to cell free supernatant (A, C) and pellet (B, D) of <i>B. cereus</i> Ism37 and <i>E. cloacae</i> Ism26, respectively.	57
(7)	Effect of light conditions on AgNPs synthesis by <i>B. cereus</i> Ism37 and <i>E. cloacae</i> Ism26. Silver nitrate (1 mM) added to cell free supernatant and pellet of <i>B. cereus</i> Ism37 (A, B) and <i>E. cloacae</i> Ism26 (C, D), respectively.	59

(8)	Effect of pellet sonication on AgNPs synthesis in light by <i>B. cereus</i> Ism37 and <i>E. cloacae</i> Ism26 pellets. Silver nitrate added to bacterial lysate supernatant of <i>B. cereus</i> Ism37 (A) and <i>E. cloacae</i> Ism26 (B), respectively (1: control, 2: treated).	60
(9)	AgNPs synthesis in light by <i>B. cereus</i> Ism37 (A) and <i>E. cloacae</i> Ism26 (B). (1: (control) bacterial lysate supernatant and 2: (treated) bacterial lysate supernatant with AgNO ₃).	61
(10)	X-ray diffraction pattern of AgNPs synthesized using <i>B. cereus</i> Ism37.	64
(11)	X-ray diffraction pattern of AgNPs synthesized using <i>E. cloacae</i> Ism26.	64
(12)	FTIR spectra of AgNPs synthesized by <i>B. cereus</i> Ism37.	66
(13)	FTIR spectra of AgNPs synthesized by <i>E. cloacae</i> Ism26.	67
(14)	DLS analysis size distribution (A) <i>B. cereus</i> Ism37 AgNPs and (B) <i>E. cloacae</i> Ism26 AgNPs.	69
(15)	TEM micrograph of the AgNPs synthesized by <i>B. cereus</i> Ism37.	71
(16)	TEM micrographs of magnified silver nanoparticle synthesized by <i>B. cereus</i> Ism37.	71

(17)	TEM micrographs of silver nanoparticle synthesized by <i>E. cloacae</i> Ism26.	72
(18)	Effect of incubation time on AgNPs synthesis by <i>B. cereus</i> Ism37. (A, B, C, D, E, F and G show the reaction after 1, 2, 3, 4, 5, 6 and 24 hours, respectively)	74
(19)	UV-visible spectra: Effect of incubation time on AgNPs synthesis by <i>B. cereus</i> Ism37.	75
(20)	Effect of incubation time on AgNPs synthesis by <i>E. cloacae</i> Ism26. (A, B, C, D, E, F and G show the reaction after 1, 2, 3, 4, 5, 6 and 20 h, respectively).	76
(21)	UV-visible spectra: Effect of incubation time on AgNPs synthesis by <i>E. cloacae</i> Ism26.	77
(22)	UV-visible spectra: Effect of temperatures on AgNPs synthesis. (A) <i>B. cereus</i> Ism37 and (B) <i>E. cloacae</i> Ism26.	79
(23)	UV-visible spectra: Effect of pH on AgNPs synthesis. (A) <i>B. cereus</i> Ism37 and (B) <i>E. cloacae</i> Ism26.	81
(24)	pH effect on AgNPs synthesis. (A) <i>B. cereus</i> Ism37 (flasks: 1:pH2, 2:pH3, 3:pH4, 4:pH5, 5:pH6, 6:pH7, 7:pH8) and (B) <i>E. cloacae</i> Ism26 (flasks: pH2, 2:pH3, 3:pH4, 4:pH5, 5:pH6, 6:pH7, 7:pH8).	82
(25)	UV-visible spectra: Effect of different volumes of bacterial lysate supernatant	84
