STUDY OF ANGIOTENSIN CONVERTING ENZYME IN DIABETIC NEPHROPATHY

B4867

Thesis
Submitted For Partial Fulfillment Of
M.D. Degree In Endocrinology

By
Ahmed El-Sayed Abdel-Rahman
M.B., B.Ch., M.Sc.

Supervised by

Prof. Dr. Samir M. Sadek
*Professor Of Internal Medicine
and Endocrinology
Faculty Of Medicine
Ain Shams University*

Prof. Dr. Soheir M. Gamal El-Dein
*Professor Of Internal Medicine
and Endocrinology
Faculty Of Medicine
Ain Shams University*

Dr. Mohamed Reda A. Halawa
*Lecturer Of Internal Medicine.
Faculty Of Medicine Ain Shams University*

=====

ACKNOWLEDGMENT

Foremost and lastly I would offer my dedicated gratitude to ALLAH for all his gifts and merciful.

I would like to express my deepest gratitude to Prof. Dr. Samir Sadek, professor of Internal Medicine and Endocrinology, Faculty of Medicine, Ain Shams University for close supervision and great co-operation throughout the whole course of this study.

I wish to express my highest appreciation and thanks to Prof. Dr. Soheir Gamal El-Din, professor of Internal Medicine and Endocrinology, Faculty of Medicine, Ain Shams University, who offered me the generous support and many useful suggestions throughout this work.

Most sincere thanks to Prof. Dr. Wassef Girgis, professor of Internal Medicine and head of Endocrinology unit, National Research Center, who has chosen the point of this study and gave me the broadoutline of such subject for his precious guidance, help and continuous supervision during this work.

Many thanks to Dr. Mohamed Reda, lecturer of Internal Medicine and Endocrinology, Faculty of Medicine, Ain Shams University for his advices and support.

A lot of thanks to Dr. Saadia Ibraheim, lecturer of biochemistry, National Research Center, for performing the laboratory procedures of this work.

Also, I wish to express my deepest thanks to Dr. Afaf Abdel-Wahab Haggag, fellow of Endocrinology and Metabolism, Ain Shams University, for great co-operation during this work.

Lastly, I'm grateful to all patients who have shared in this study to whom I'm greatly indebted.

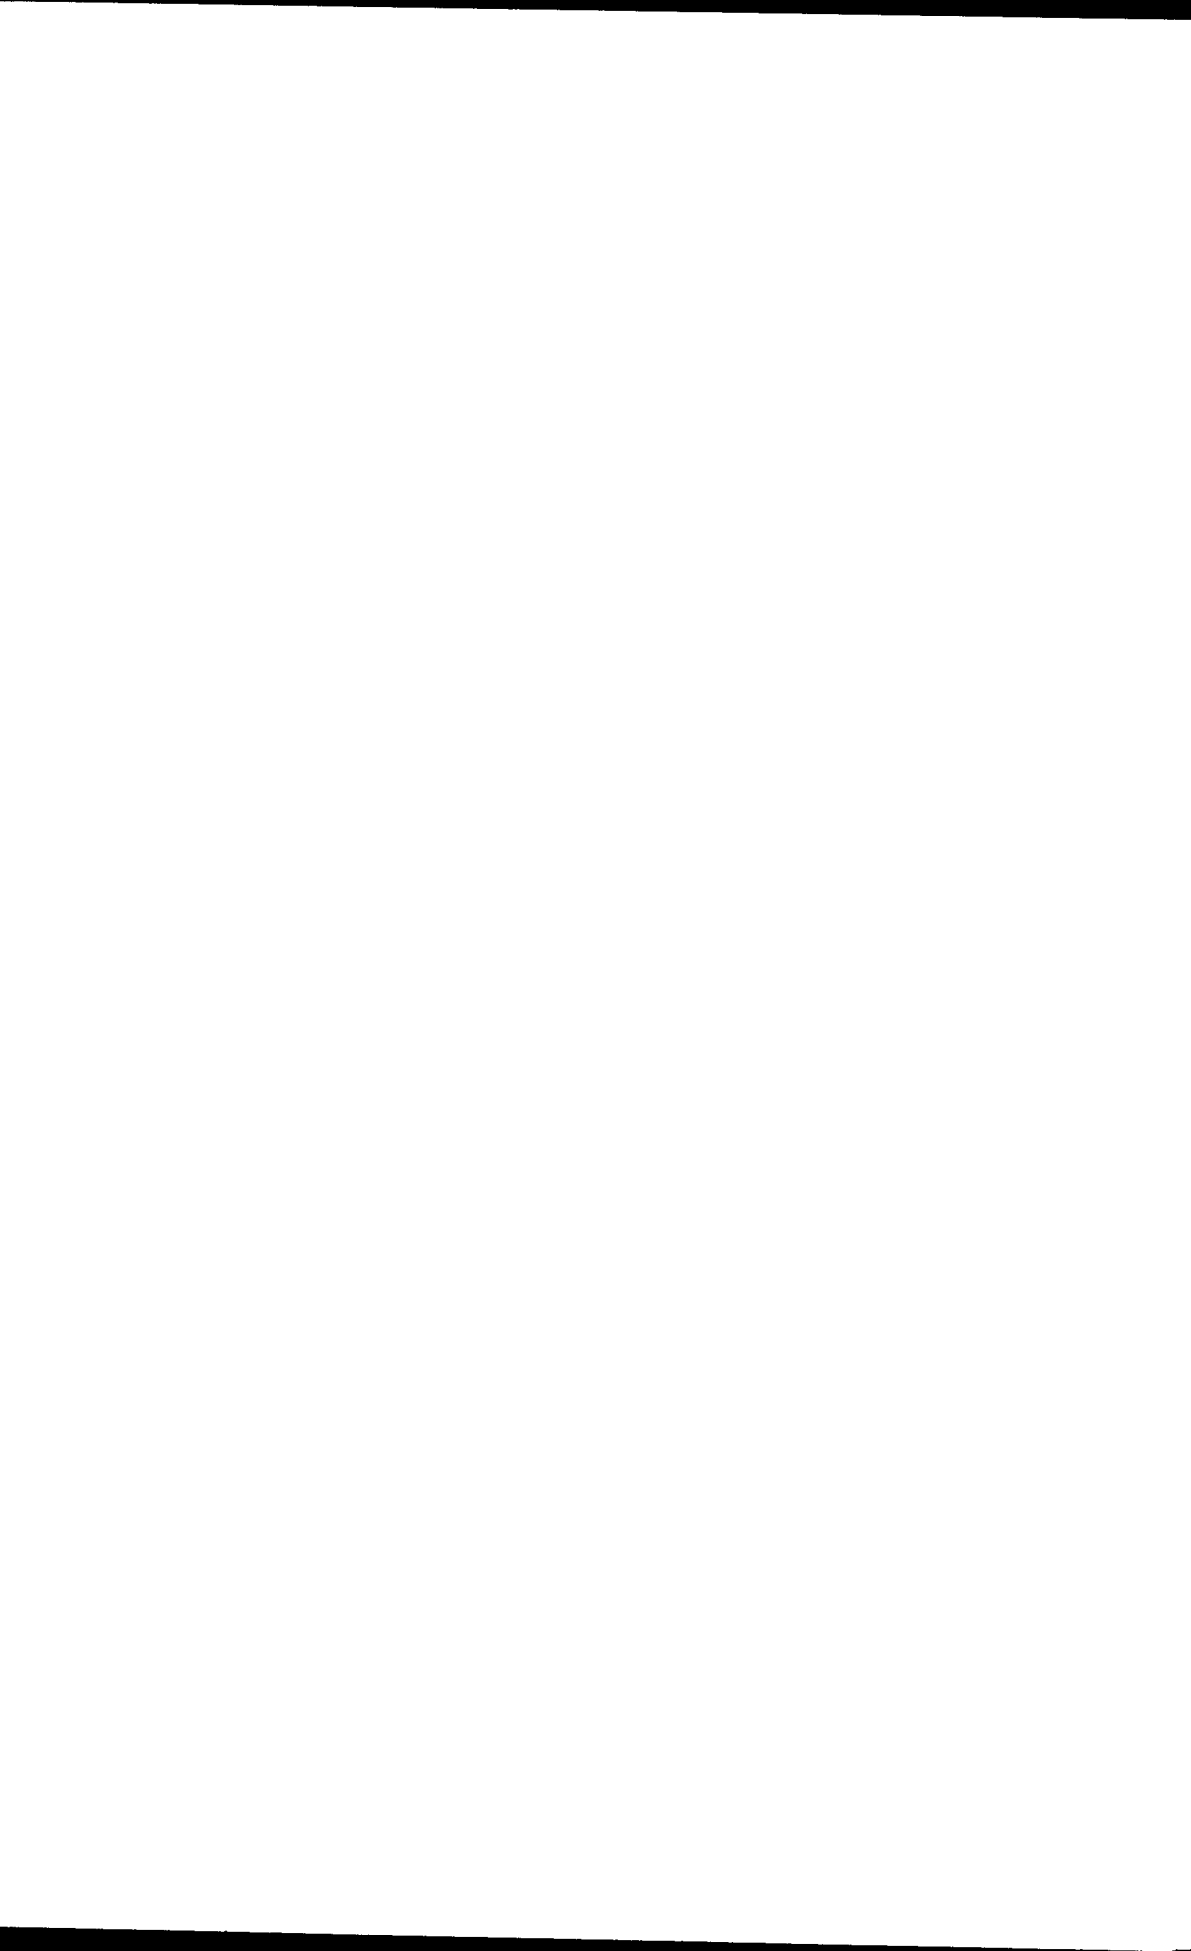

Ahmed Elsayed

Contents	Page
Introduction & Aim of the work	VI
♦ Review of literature	
• Renin Angiotensin Aldosterone System	1
• Diabetes Mellitus	19
• Pathogenesis of daibetic complications	24
• Diabetic Nephropathy	42
• RAS in Diabetes Mellitus	59
• Syndrome of hyporeninemic hypoaldosteronism	69
• Angiotensin Converting Enzyme in Diabetes Mellitus	77
♦ Subjects and Methods	85
♦ Results	108
♦ Discussion	124
♦ Summary, Conclusion and recommendation	134
♦ References	137
♦ Arabic Summary	

List Of Tables

No	Title	Page
1	Regulation of renin secretion	7
2	Some physiologic effects attributed to angiotensin-II	13
3	Inhibitors of the RAS	17
4	Classification of diabetes mellitus and other categories of glucose intolerance	20
5	Possible mechanisms by which hyperglycemia produces vascular complications	27
6	Clinical and laboratory characteristics in patients with the syndrome of hyporeninemic hypoaldosteronism	71
7	Clinical data of all groups	112
8	Routine laboratory data of all groups	113
9	Plasma renin activity in different groups.	113
10	Plasma renin activity in complicated diabetics with nephropathy (microalbuminurics + macro-albuminurics), control subjects and non complicated diabetics	114
11	Correlation between PRA and serum creatinine in all groups.	114
12	Serum ACE activity in different groups.	115
13	Serum ACE activity in complicated diabetics (with nephropathy: microalbuminurics + macro-albuminurics) in comparison with both control group and non complicated diabetics	115
14	Serum ACE activity in non complicated diabetics correlated with duration of diabetes, blood glucose level (fasting and postprandial), and blood pressure (systolic and diastolic).	116
15	Serum ACE activity in microalbuminuric diabetics correlated with duration of diabetes, blood glucose level (fasting and postprandial), and blood pressure (systolic and diastolic).	116
16	Serum ACE activity in macroalbuminuric diabetics correlated with duration of diabetes, blood glucose level (fasting and postprandial), and blood pressure (systolic and diastolic).	116
17	Serum ACE activity in diabetic patients with retinopathy in comparison with diabetic patients without retinopathy	117
18	Serum ACE activity in diabetic patients on oral hypoglycemic drugs in comparison with diabetic patients on insulin therapy.	117
19	Plasma angiotensin II in different groups.	118

List Of Figures

No	Title	Page
1	The renin-angiotensin-aldosterone cascade. Solid lines represent positive influence and dashed lines represents negative influence	2
2	Possible mechanism of polyol effect on cellular function and redox potential.	28
3	Redox relationship in the polyol pathway	30
4	Formation of AGEs from glucose	32
5	Mechanism of glucose autooxidation	36
6	ACE in diabetic patients.	119
7	PRA in different groups.	119
8	Serum ACE activity in different groups.	120
9	Serum ACE activity in diabetic patients with and without retinopathy.	120
10	Serum ACE activity in diabetic patients on oral hypoglycemic drugs in comparison with diabetic patients on insulin therapy.	121
11	Plasma Angiotensin II in different groups.	121
12	Correlation between PRA and serum creatinine in control group.	122
13	Correlation between PRA and serum creatinine in non complicated diabetics..	122
14	Correlation between PRA and serum creatinine in microalbuminuric diabetics.	123
15	Correlation between PRA and serum creatinine in macroalbuminuric diabetics..	123
