

# Management plan for enhancing Bardawil Lagoon productivity using Remote Sensing and Geographic Information System

A Thesis submitted for the award of the Degree of Doctor Philosophy in  
Science (Ph.D.) in Zoology (Aquatic Ecology)

By

**Wiame Waheed Mahmoud Emam**

Master in Aquatic Ecology (2011)

Under Supervision of

**Prof. Magdy T. Khalil**

Prof. of Aquatic Ecology, Zoology Dept.,  
Faculty of Science, Ain Shams University.

**Prof. Abd El-Halim A. Saad**

Prof. of Aquatic Ecology, Zoology Dept., Faculty of  
Science, Ain Shams University.

**Prof. Mahmoud H. Ahmed**

Prof. of Oceanography & Coastal Studies, Marine  
Sciences Dept., National Authority for Remote  
Sensing & Space Sciences [NARSS].

**Dr. Sameh B. El-Kafrawy**

Researcher in Marine Science, Marine Sciences  
Dept., National Authority for Remote Sensing &  
Space Sciences [NARSS].

Zoology Department  
Faculty of Science  
Ain Shams University

**(2016)**

Zoology Department  
Faculty of Science  
Ain Shams University

## Approval Sheet

### Title of Thesis:

Management plan for enhancing Bardawil Lagoon productivity  
using Remote Sensing and Geographic Information System

**Candidate Name: Wiame Waheed Mahmoud Emam**

### Supervisors

### Signature

**Prof. Magdy T. Khalil**

Prof. of Aquatic Ecology, Zoology Dept., Faculty  
of Science, Ain Shams University.

**Prof. Abd El-Halim A. Saad**

Prof. of Aquatic Ecology, Zoology Dept., Faculty of  
Science, Ain Shams University.

**Prof. Mahmoud H. Ahmed**

Prof. of Oceanography & Coastal Studies, Marine  
Sciences Dept., National Authority for Remote Sensing  
& Space Sciences [NARSS].

**Dr. Sameh B. El-Kafrawy**

Researcher in Marine Science, Marine Sciences Dept.,  
National Authority for Remote Sensing & Space  
Sciences [NARSS].

# Acknowledgements

Praise and thanks to **Allah** without whose help, I would not have been able to complete this work.

My deepest gratitude and sincere appreciation goes to **Prof. Dr. Magdy Tawfik Khalil**, Professor of Aquatic Ecology, Faculty of Science, Ain Shams University, not only for planning the point of research and keen supervision, but also for his guidance and continuous encouragement.

I wish to express my sincere gratitude and deep thanks to **Prof. Dr. Abd El-Halim Abdo Saad**, Professor of Invertebrates, Faculty of Science, Ain Shams University, for his supervision and help. He aided me over many difficulties throughout the work.

I would like to express my great thanks to **Prof. Dr. Mahmoud Hussin Ahmed**, Professor of Oceanography and Coastal studies, Marine Science Department, National Authority for Remote Sensing and Space Sciences, for his supervision and assistance.

I am indebted to **Dr. Sameh Bakr El-Sayed El-Kafrawy**, Researcher in Marine Science, Marine Science Department, National Authority for Remote Sensing and Space Sciences, for his teaching, guidance, valuable suggestions, encouragement and continuous direction throughout the work.

Finally, no words seem to be sufficient to describe how much I owe to my beloved **Prof. Dr. Waheed Mahmoud Emam** for his spiritual inspiration and super encouragement to be able to fulfill this work.

|--------------------------------------------------------------------------------------|------------|
| <b>4.3. Results and Discussion</b>                                                   | <b>209</b> |
| <b>4.3.1. DPSIR framework for managing pressures due to anthropogenic factors</b>    | <b>214</b> |
| 1. Urbanization                                                                      | 214        |
| 2. Tourism and recreational activities                                               | 216        |
| 3. Salt industry                                                                     | 220        |
| 4. Fishing                                                                           | 224        |
| 5. Agriculture and land reclamation                                                  | 230        |
| 6. Transportation                                                                    | 233        |
| <b>4.3.2. DPSIR framework for managing pressures due to natural factors</b>          | <b>236</b> |
| 1. Pressures due to tide, wind and currents                                          | 236        |
| 2. Pressures due to rate of rainfall                                                 | 239        |
| 3. Pressures due to migratory birds and sea turtles                                  | 239        |
| <b>4.3.3. Pressures due to natural factors associated with anthropogenic factors</b> | <b>243</b> |
| <b>4.3.4. Main impacts due to anthropogenic and natural factors</b>                  | <b>244</b> |
| 1. Inlet siltation                                                                   | 244        |
| 2. Change in Bardawil Lagoon's area                                                  | 248        |
| 3. Water quality                                                                     | 250        |
| 4. Food web                                                                          | 252        |
| <b>4.3.5. Conflicts in Bardawil Lagoon due to anthropogenic factors</b>              | <b>256</b> |
| 1. Between urbanization and resources                                                | 256        |
| 2. Between urbanization and economic activities                                      | 256        |
| 3. Between economic activities and resources                                         | 256        |
| 4. Between different economic activities                                             | 257        |
| <b>4.3.6. Proposed responses to mitigate anthropogenic and natural impacts</b>       | <b>258</b> |
| 1. Monitoring programs using RS and GIS for managing Bardawil Lagoon.                | 258        |
| 2. Empowering legal framework                                                        | 261        |
| 3. General responses to mitigate impacts of pressures facing Bardawil Lagoon         | 262        |
| <b>Conclusions and Recommendations</b>                                               | <b>264</b> |
| <b>English Summary</b>                                                               | <b>269</b> |
| <b>References</b>                                                                    | <b>299</b> |
| <b>Arabic Summary</b>                                                                |            |
| <b>Arabic Abstract</b>                                                               |            |

## List of Figures

|                      |                                                                                                                                              |           |
|----------------------|----------------------------------------------------------------------------------------------------------------------------------------------|-----------|
| <b>Figure (1):</b>   | The main components involved in remote sensing technology.                                                                                   | <b>6</b>  |
| <b>Figure (2):</b>   | GIS components.                                                                                                                              | <b>8</b>  |
| <b>Figure (3):</b>   | Location of study area.                                                                                                                      | <b>11</b> |
| <b>Figure (1.1):</b> | Sampling sites of Bardawil Lagoon. False color composite of Landsat-8 image (RGB = 653).                                                     | <b>18</b> |
| <b>Figure (1.2):</b> | Measured against predicted values of salinity in 12 stations at Bardawil Lagoon during March, June, September and December 2014.             | <b>56</b> |
| <b>Figure (1.3):</b> | Measured against predicted values of water temperature in 12 stations at Bardawil Lagoon during March 2014.                                  | <b>58</b> |
| <b>Figure (1.4):</b> | Measured against predicted values of pH in 12 stations at Bardawil Lagoon during June, September and December 2014.                          | <b>59</b> |
| <b>Figure (1.5):</b> | Measured against predicted values of DO in 12 stations at Bardawil Lagoon during March, June, September and December 2014.                   | <b>61</b> |
| <b>Figure (1.6):</b> | Measured against predicted values of depth in 12 stations at Bardawil Lagoon during March, June, September & December 2014.                  | <b>63</b> |
| <b>Figure (1.7):</b> | Cartographic maps of salinity distribution as obtained from GIS analysis in Bardawil Lagoon during March, June, September and December 2014. | <b>66</b> |
| <b>Figure (1.8):</b> | Cartographic map of water temperature distribution as obtained from GIS analysis in Bardawil Lagoon during March 2014.                       | <b>67</b> |
| <b>Figure (1.9):</b> | Cartographic maps of pH distribution as obtained from GIS analysis in Bardawil Lagoon during June, September and December 2014.              | <b>69</b> |

## List of Figures

|                       |                                                                                                                                                                               |           |
|-----------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------|
| <b>Figure (1.10):</b> | Cartographic maps of DO distribution as obtained from GIS analysis in Bardawil Lagoon during March, June, September & December 2014.                                          | <b>71</b> |
| <b>Figure (1.11):</b> | Cartographic maps of depth distribution as obtained from GIS analysis in Bardawil Lagoon during March, June, September and December 2014.                                     | <b>73</b> |
| <b>Figure (1.12):</b> | Bathymetric charts as obtained from GIS analysis with contour interval 0.1 m in Bardawil Lagoon during March, June, September and December 2014.                              | <b>74</b> |
| <b>Figure (2.1):</b>  | Landsat TM (May 1984) used in the present study for Bardawil Lagoon (Scale = 1:280,340).                                                                                      | <b>82</b> |
| <b>Figure (2.2)</b>   | Landsat OLI (May 2014) used in the present study for Bardawil Lagoon (Scale = 1:280,340).                                                                                     | <b>83</b> |
| <b>Figure (2.3)</b>   | Create New Shapefile window in ArcCatalog.                                                                                                                                    | <b>85</b> |
| <b>Figure (2.4)</b>   | Digitizing Bardawil's boundary 2014 (polygon shapefile) at scale: 1:24,000 in ArcMap 10.1.                                                                                    | <b>87</b> |
| <b>Figure (2.5):</b>  | Diagram showing how "Erase" tool works in ArcMap 10.1 (Source: <b>ArcGIS Help 10.1, 2013</b> ).                                                                               | <b>89</b> |
| <b>Figure (2.6):</b>  | Map showing the boundaries of the two water bodies (Bardawil and Zaranik Lagoon) under investigation.                                                                         | <b>90</b> |
| <b>Figure (2.7):</b>  | Change map of Bardawil's boundary in the lagoon's western arm (sector 1) in years 1984 and 2014. (A): Digitized overlaid boundaries. (B): Sites of erosion and sedimentation. | <b>94</b> |
| <b>Figure (2.8):</b>  | Change map of Bardawil's boundary (sector 2) for years 1984 and 2014. (A): Digitized overlaid boundaries. (B): Sites of erosion and sedimentation.                            | <b>95</b> |
| <b>Figure (2.9):</b>  | Change map of Bardawil's boundary (sector 3) for years 1984 and 2014. (A): Digitized overlaid boundaries. (B): Sites of erosion and sedimentation.                            | <b>96</b> |

|                       |                                                                                                                                                    |            |
|-----------------------|----------------------------------------------------------------------------------------------------------------------------------------------------|------------|
| <b>Figure (2.10):</b> | Change map of Bardawil's boundary (sector 4) for years 1984 and 2014. (A): Digitized overlaid boundaries. (B): Sites of erosion and sedimentation. | <b>97</b>  |
| <b>Figure (2.11):</b> | Landsat TM (1984) and Landsat OLI (2014) images for Zaranik Lagoon at scale 1:30,000.                                                              | <b>99</b>  |
| <b>Figure (2.12):</b> | Change map of Zaranik Lagoon's boundary for years 1984 and 2014. (A): Digitized overlaid boundaries. (B): Sites of erosion and sedimentation.      | <b>100</b> |
| <b>Figure (2.13):</b> | Bardawil Lagoon map showing Western, Middle, Eastern and Zaranik sandbar (Scale = 1:277,843).                                                      | <b>102</b> |
| <b>Figure (2.14):</b> | Change map of Western sandbar for years 1984 and 2014. (A): Digitized overlaid sandbars. (B): Sites of erosion and sedimentation.                  | <b>105</b> |
| <b>Figure (2.15):</b> | Change map of Middle sandbar for years 1984 and 2014. (A): Digitized overlaid sandbars. (B): Sites of erosion and sedimentation.                   | <b>106</b> |
| <b>Figure (2.16):</b> | Change map of Eastern sandbar for years 1984 and 2014. (A): Digitized overlaid sandbars. (B): Sites of erosion and sedimentation.                  | <b>108</b> |
| <b>Figure (2.17):</b> | Change map of Zaranik sandbar for years 1984 and 2014. (A): Digitized overlaid sandbars. (B): Sites of erosion and sedimentation.                  | <b>109</b> |
| <b>Figure (2.18):</b> | Landsat data showing changes in Boughaz I throughout the period from 1984 to 2014 (Scale = 1:100,000).                                             | <b>112</b> |
| <b>Figure (2.19):</b> | Landsat data showing changes in Boughaz II throughout the period from 1984 to 2014 (Scale = 1:60,000).                                             | <b>113</b> |
| <b>Figure (2.20):</b> | Change map of area surrounding Boughaz I for years 1984 and 2014. (A): Digitized overlaid sandbars. (B): Sites of erosion and sedimentation.       | <b>115</b> |
| <b>Figure (2.21):</b> | Change map of area surrounding Boughaz II for years 1984 and 2014. (A): Digitized overlaid sandbars. (B): Sites of erosion and sedimentation.      | <b>117</b> |
