

SAFE SURGICAL HIP DISLOCATION

Essay

*Submitted for partial fulfillment of Master Degree
in Orthopedic Surgery*

By

Ahmed Eid Morsy Khaled

M.B, B.Ch

Under Supervision of:

Prof. Dr. Tarek Mohamed Khalil

Professor of Orthopedic Surgery

Faculty of Medicine

Ain Shams University

Dr. Haytham Abdelazim Mohamed

Lecturer of Orthopedic Surgery

Faculty of Medicine

Ain Shams University

Orthopedic Department

Faculty of Medicine

Ain Shams University

2015

بِسْمِ اللَّهِ الرَّحْمَنِ الرَّحِيمِ

قَالُوا سُبْحَانَكَ

لَا عِلْمَ لَنَا

إِلَّا مَا عَلَّمْتَنَا

إِنَّكَ أَنْتَ

الْعَلِيمُ الْحَكِيمُ

صِرَاقُ اللَّهِ الْعَظِيمِ

سُورَةُ الْبَقَرَةِ (آيَةُ ٣٢)

*First thanks to **ALLAH** to whom I relate any success in achieving any work in my life.*

*I wish to express my deepest thanks, gratitude and appreciation to **Prof. Dr. Tarek Mohamed Khalil**, Professor of Orthopedic Surgery, Faculty of Medicine, Ain Shams University for his sincere efforts, kind guidance, valuable instructions and generous help.*

*Special thanks are due to **Dr. Haytham Abdelazim Mohamed**, Lecturer of Orthopedic Surgery, Faculty of Medicine, Ain Shams University, for his meticulous supervision and fruitful encouragement kind guidance and generous help.*

I would also like to express my deep thanks to my parents, wife, family, friends, my senior staff and colleagues in the orthopedic department for their help and support.

Ahmed Eid Morsy

الخلع الجراحي الآمن لفصل الفخذ

رسالة

توطئه للحصول علي درجة الماجستير في جراحة العظام

مقدمة من

الطبيب / أحمد عيد مرسى خالد

بكالوريوس الطب والجراحة

تحت إشراف

الأستاذ الدكتور / طارق محمد خليل

أستاذ جراحة العظام

كلية الطب - جامعة عين شمس

الدكتور / هيثم عبد العظيم محمد

مدرس جراحة العظام

كلية الطب - جامعة عين شمس

قسم جراحة العظام

كلية الطب

جامعة عين شمس

List of Contents

	Page
LIST OF ABBREVIATIONS	I
LIST OF TABLES	II
LIST OF FIGURES	III
Introduction	1
Aim of the Work	4
<i>Chapter (1): Vascular Anatomy of the Femoral Head</i>	5
<i>Chapter (2): Surgical Approach and Technique</i>	16
<i>Chapter (3): Indications</i>	32
<i>Chapter (4): Complications</i>	56
<i>Chapter (5): Case Presentations</i>	67
Summary and Conclusion	82
References	84
Arabic Summary	--

List of Abbreviations

AVN	: Avascular necrosis
DJD	: Degenerative joint disease
DVT	: Deep venous thrombosis
FAI	: Femoroacetabular-impingement
IGA	: Inferior gluteal artery
LCPD	: Legg-Calvé-Perthes disease
LDF	: Laser Doppler flowmetry
LFCA	: Lateral femoral circumflex artery
MFCA	: Medial femoral circumflex artery
MHE	: Multiple Hereditary Exostoses
MRI	: Magnetic resonance imaging
NSAIDS	: Non-steroidal anti-inflammatory drugs
O.A.	: Osteoarthritis
PVNS	: Pigmented villonodular synovitis
SCFE	: Slipped capital femoral epiphysis

List of Tables

No.	Table	Page
1-	Advantages and Disadvantages of Open and Arthroscopic Approaches to FAI Treatment	43
2-	Brooker classification of heterotopic ossification around the hip joint	59

List of Figures

No.	Figure	Page
1-	Blood supply of the femoral head	7
2-	Photograph showing the perforation of the terminal branches of MFCA into bone	10
3-	Photograph during cadaver dissection of the posterior view of the left hip joint with the femoral head partly exposed	11
4-	Posterior aspect of the right hip	13
5-	Photograph showing the integrity of the deep branch of the MFCA during dislocation of the head of the femur	15
6-	Anterior Smith-Peterson approach to the hip	17
7-	Direct lateral approach to the hip	18
8-	Anterolateral approach to the hip	19
9-	Posterior approach to the hip	21
10-	Patient position	22
11-	Incision and exposure of the greater trochanter	23
12-	Diagram showing the line of trochanteric osteotomy for the trochanteric flip	24
13-	Diagram showing capsule exposure	25
14-	Diagram showing the Z-shaped capsulotomy	27

List of Figures

No.	Figure	Page
15-	Diagram showing the position of hip dislocation	28
16-	Diagram showing acetabulum exposure	29
17-	Creation of retinaculum flap.	34
18-	A) A case was diagnosed with right unstable slipped capital femoral epiphysis (SCFE) and left chronic SCFE. B), C) The patient underwent right subcapital corrective osteotomy and open reduction through means of surgical dislocation of the hip and left in situ fixation with a 7.3-mm fully threaded screw	35
19-	A) An 11-year-old girl was diagnosed with a left unstable SCFE. B) Left hip AVN was noticed at 6 months follow-up	37
20-	Anteroposterior radiographs pre and post-surgical dislocation of right hip perthes disease and relative femoral neck lengthening demonstrating improved head-neck offset and center trochanteric distance	39
21-	The two forms of femoroacetabular impingement (FAI) are shown.	42
22-	Management of acetabulum retroversion	45
23-	Femoral correction through trimming of the aspherical portion of the head, normally located anterosuperiorly	47
24-	Intra-operative photographs of a) surgically dislocated femoral head with cam lesion (green arrows) and b) following cam excision	51
25-	Excision of acetabular osteochondroma	52

List of Figures

No.	Figure	Page
26-	Excision of the synovial tumor using the Ganz surgical dislocation approach	53
27-	Intraoperative picture showing the presence of the bullet in the femoral head	55
28-	Intraoperative picture shows defect in femoral head after removal of bullet	55
29-	Anatomy of sciatic nerve	65
30-	Anteroposterior and frog lateral plain x-rays views on pelvis show right slipped capital femoral epiphyses (SCFE)	67
31-	MRI pelvis showing both hips exclude AVN in right SCFE	68
32-	Creation of retinaculum flap	69
33-	Curretage of residual growth plate from femoral head	70
34-	Subcapital osteotomy and realignment	70
35-	Post-operative anteroposterior and lateral plain x-rays views of subcapital corrective osteotomy of right SCFE	71
36-	Pre-operative anteroposterior and lateral plain x-rays views show right fracture neck and intertrochanteric femur	72
37-	Pre-operative C.T scan show sclerotic edges	72
38-	Pre-operative MRI shows viability of femoral head	73
39-	Intra-operative picture after hip dislocation	73
40-	Post-operative anteroposterior and lateral plain x-rays views show fixation of fracture by trochanteric plate	74

List of Figures

No.	Figure	Page
41-	Pre-operative A) anteroposterior and B) lateral plain x-rays views show right aspherical head with cam lesion	74
42-	Pre-operative C.T scan (coronal and axial cuts) shows anterior hump of right femoral head	75
43-	Intra-operative picture shows resection of the anterior hump	75
44-	Intra-operative picture shows debridement and smoothing by burr	76
45-	Post-operative anteroposterior and lateral plain x-rays views after osteochondroplasty	76
46-	Anteroposterior plain x-ray view shows bilateral fracture acetabulum (T-type) and right sacroiliac dislocation	77
47-	Iliac and obturator judet views	77
48-	C.T scan of the pelvis(3D and coronal cuts) shows bilateral fracture acetabulum (T-type) and right sacroiliac dislocation	78
49-	A) Intra-operative picture for fixation of posterior column. B) Visualization of reduction of acetabular articular surface	78
50-	Post-operative anteroposterior plain x-ray after fixation of right acetabulum fracture and sacroiliac dislocation	79
51-	Post-operative obturator and iliac judet views	79
52-	Pre-operative anteroposterior plain x-ray showing both hips with multiple osteochondromas	80
53-	C.T scan (coronal cut) of pelvis shows left intra-articular lesion	80
54-	Intra-operative image shows excision of acetabular osteochondroma	81
55-	Drill hole made in the dislocated head to document preservation of its blood supply by observing the blood spilling out from the drill hole	81

INTRODUCTION

Despite the success of hip replacements and great advances in technology that have improved the durability of these implants, joint replacement is not the ideal option in the young as they have limitations and may require another revision operation. This need drove many great minds in the field of orthopedics to study these unique patients and to invent new surgical procedures aiming to preserve the hip that would alleviate these patients pain and hopefully prevent further hip joint damage. One of these new procedures is the safe surgical hip dislocation technique.⁽¹⁾

Surgical hip dislocation gives new insight into the pathogenesis of various traumatic and non-traumatic hip disorders and the possibility of preserving the hip. Surgical dislocation had been carried out before through the anterior, lateral and posterior approaches, but visualization of the entire femoral head and acetabular cartilage was not optimal, besides, they had considerably high complication rates.^(2,3)

With improved understanding of the vascularity of the proximal femur and the hip joint, and the ability to safely dislocate the hip joint after extensive work by Ganz et al⁽³⁾, a new era described as “*hip preservation*” has emerged, based on improving the forces within the hip by restoring normal hip biomechanics.^(1,3,4)

Ganz safe surgical dislocation of hip is a very useful procedure for the exposure of intra articular pathologies of the hip. It does not compromise the blood supply of the head of the femur. Hence there is no risk of avascular necrosis. Using this technique, hip preserving surgeries can be easily performed with good exposure of intra articular and peri articular tissues.⁽⁵⁾

There is little morbidity associated with the technique and it allows the treatment of a variety of conditions, which may not respond well to other methods including arthroscopy.⁽³⁾

It combines aspects of approaches which have been reported previously and consists of an anterior dislocation through a posterior approach with a ‘trochanteric flip’ osteotomy. The external rotator muscles are not divided and the medial femoral circumflex artery is protected by the intact obturator externus.⁽³⁾

Safe surgical hip dislocation has been applied for correction of intra articular deformity in slipped capital femoral epiphysis, femoral head impingement in deformed head due to Legg - Calve - Perthes disease, extensive femoroacetabular-impingement (FAI), acetabular fracture , femoral head fractures, refixation of labral tears under vision if there is extensive lesion, as an approach for surface replacement arthroplasty, intra articular pathologies like synovial chondromatosis, pigmented villonodular synovitis and in joint debridement.⁽⁵⁾

Surgical hip dislocation is a safe procedure with a low complication rate. The commonest complications reported were heterotopic ossification, trochanteric non-union and sciatic nerve injury.⁽⁶⁾

AIM OF THE WORK

A review of literature to evaluate the safety and efficacy of surgical hip dislocation approach in the surgical management of various pathologies of the hip joint.
