Cairo University
Faculty of Computer and Information
Information Technology Department

Video Streaming over Wireless Networks

By

Walid Mohiy El-Din Adly

**A Thesis Submitted to the
Faculty of Computers & Information
Cairo University
in Partial Fulfillment of the
Requirement for the Degree of
Master of Science
in
Information Technology**

Under the supervision of

Prof. Dr. Mohamed Gamal El-Din Darwish
Information Technology Department
Faculty of Computers and Information
Cairo University

Prof. Dr. Imane Aly Saroit Ismail

Cairo University

Cairo
March/2008

ADMISSION

I certify that this work has not been accepted in substance for any academic degree and is not being concurrently submitted in candidature for any other degree.

Any portion of this thesis for which I am indebted to other sources are mentioned and explicit reference are given.

Student Name : Walid Mohiy El-Din Adly

Signature : Walid Mohiy

Video Streaming over wireless Networks

LIST OF TABLES	ix
LIST OF FIGURES	x
LIST OF SYMBOLS AND ABBREVIATIONS	xiv
ACKNOWLEDGMENTS	xvi
ABSTRACT	xvii
 Chapter 1	
INTRODUCTION.....	1
 Chapter 2	
WIRELESS NETWORKS.....	6
2.1 Wireless Networks.....	7
2.1.1 Wireless Network Classifications.....	7
2.1.1.1 Classification According to Infrastructure.....	7
2.1.1.2 Classification According to mobility of hosts.....	8
2.2 Mobile Ad hoc Network.....	10
2.2.1 Mobile Ad hoc Networks Definitions.....	10
2.2.1.1 IETF Definition of Ad hoc Network.....	11
2.2.1.2 Murphy Definition of Ad hoc Network.....	12
2.2.2 Mobile Ad hoc Network Graph.....	13
2.3 Classification of Ad hoc Networks.....	14
2.3.1 Classification According to Communication.....	14
2.3.1.1 Single-hop Ad hoc Network.....	14
2.3.1.2 Multi-hop Ad hoc Network.....	15

2.3.1.3 Mobile Multi-hop Multimedia Ad hoc Network...	15
2.3.2 Classification According to Topology.....	15
2.3.2.1 Flat Ad hoc Networks.....	16
2.3.2.2 Hierarchical Ad hoc Networks.....	16
2.3.2.3 Aggregate Ad hoc Networks.....	17
2.3.3 Classification According to Node Configuration.....	18
2.3.3.1 Homogeneous Ad hoc Networks.....	18
2.3.3.2 Heterogeneous Ad hoc Networks.....	19
2.3.4 Classification According to Coverage Area.....	19
2.3.5 Classification according to network size.....	20
2.4 Properties of Mobile Ad hoc Networks.....	21
2.4.1 Ad hoc Deployment.....	21
2.4.2 Dynamic Topology.....	21
2.4.3 Bandwidth Capacity.....	21
2.4.4 Energy Conservation.....	22
2.4.5 Security Issues	22
2.4.6 Autonomous Operation Mode.....	22
2.4.7 Distributed Operation.....	22
2.4.8 Multi-hop Routing.....	23
2.4.9 Hardware specifications.....	23
2.5 Challenges in Mobile Ad hoc Network Routing.....	23
2.5.1 Frequent Topology Changes.....	23
2.5.2 Frequent and Unpredictable Connectivity Changes.....	23
2.5.3 Bandwidth Constrained and Variable Capacity Links.....	24
2.6 Ad hoc Routing Principles.....	24
2.6.1 Loop free.....	24
2.6.2 Distributed control.....	24
2.6.3 Fast routing.....	24
2.6.4 Localized reaction to topological changes.....	24
2.6.5 Multiplicity of routes.....	25
2.6.6 Power efficient.....	25
2.6.7 Secure.....	25
2.6.8 QoS aware.....	25

2.7 Classifications of Ad hoc Routing Protocols.....	25
2.7.1 Table-Driven Routing Protocols.....	26
2.7.1.1 Destination-Sequenced Distance-Vector Routing (DSDV).....	26
2.7.2 Source-Initiated On-Demand Routing.....	27
2.7.2.1 Ad-hoc On-Demand Distance Vector Routing (AODV).....	28
2.7.2.2 Dynamic Source Routing (DSR).....	30
2.7.3 Hybrid Routing.....	32
2.7.3.1 Zone Routing Protocol (ZRP).....	32
2.8 Summary.....	35

Chapter 3

VIDEO COMPRESSION.....	36
3.1 Digital Video.....	37
3.2 Intra-frame Coding.....	41
3.2.1 Block Scanning.....	42
3.2.2 Discrete Cosine Transformation.....	42
3.2.3 Quantization.....	43
3.2.4 Zig-Zag Scanning.....	46
3.3 Inter-frame Coding: Motion Estimation and Compensation.....	47
3.3.1 Concept of I, P, B frames.....	49
3.4 Variable Length Coding.....	50
3.5 MPEG-4.....	50
3.5.1 MPEG-4 Profiles.....	51
3.5.2 MPEG-4 Features.....	53
3.5.2.1 Pre-processing and video encoding	53
3.5.2.2 Transport-layer.....	54
3.5.2.3 Video Decoder and Post Processing.....	55
3.5.3 MPEG-4 Object Based Orientation.....	55
3.6 Summary.....	59

Chapter 4

THE PROPOSED SYSTEM.....	60
4.1 Path Diversity.....	62
4.1.1 Single Description Coding.....	63
4.1.2 Scalable Coding.....	63
4.1.3 Multiple Description Coding.....	64
4.1.3.1 Benefits of Path Diversity.....	64
4.1.3.2 Number of Paths to use.....	66
4.2 Proposed System: Group of Picture Multiple Description Coding....	67
4.2.1 The Sequence diagrams for the proposed system.....	67
4.2.1.1 The Sequence diagram for Initiating connection..	67
4.2.1.1 Problem 1: Route between Sender and Receiver	
is broken.....	68
4.2.1.2 Problem 2: One of the Sender nodes is switched	
off.....	70
4.3 Algorithm used to Encode GOP MD.....	74
4.4 The Complete Scenario of simulation.....	76
4.4.1 Scenario A "One path is disconnected".....	77
4.4.2 Scenario B "Two paths are disconnected".....	78
4.5 Summary.....	79

Chapter 5

SIMULATION AND RESULTS.....	81
5.1 Environment and simulation description.....	82
5.1.1 GloMoSim.....	82
5.1.2 Mobility Model used in simulation.....	84
5.1.3 Free Space Model.....	85
5.1.4 Parameters used in the simulation.....	86
5.2 Performance parameter used in the simulation.....	87
5.2.1 The percentage of reduced packet.....	87
5.2.2 The percentage of packet lost	87
5.2.3 The average delay for the received video.....	88

5.3 The percentage of reduced packet	88
5.4 The percentage of packet lost.....	89
5.5 The average delay for the received video.....	93
5.6 General Conclusion.....	97
5.7 Summary.....	99

Chapter 6

CONCLUSION AND FUTURE WORK.....	100
6.1 Conclusion.....	101
6.2 Future work.....	103
REFERENCES	104
APPENDIX A	111

LIST OF TABLES

Table 3.1	Characteristics for different video formats.....	38
Table 3.2	MPEG-4 Visual profiles for coding natural video.....	52
Table 3.3	Different MPEG-4 object-oriented representations of various video.....	58
Table 4.1	Benefits of path diversity.....	65
Table 5.1	Video size for transmitted video.....	87
Table 5.2	Percentage of reduced packets.....	88
Table 5.3	Summary of the Percentage of Reduced Packets.....	97
Table 5.4	Summary of the performance parameters.....	98
Table A.1	Models currently in the GloMoSim library.....	111

LIST OF FIGURES

Figure 2.1	An example of a fixed wireless network.....	8
Figure 2.2	An example of a wireless network with access points.....	9
Figure 2.3	An example of a vehicle-to-vehicle network.....	10
Figure 2.4	Dynamic topology in ad hoc networks.....	11
Figure 2.5	The graph of a wireless ad hoc network.....	13
Figure 2.6	Single-hop ad hoc network.....	14
Figure 2.7	Multi-hop ad hoc network.....	15
Figure 2.8	Flat ad hoc network.....	16
Figure 2.9	Hierarchical ad hoc network.....	16
Figure 2.10	Aggregate network architecture.....	17
Figure 2.11	Ad hoc networks classification according to coverage area.....	19
Figure 2.12	Classifications of ad hoc routing protocols.....	26
Figure 2.13	Propagation of the RREQ in AODV Routing Protocol.....	28
Figure 2.14	Path of the RREP to the Source AODV Route Discovery.....	29
Figure 2.15	Building of the Route Record during Route Discovery.....	31
Figure 2.16	Propagation of the Route Reply with the Route Record Creation of the Route Record in DSR.....	32
Figure 2.17	Network using ZRP. The dashed squares show the routing zones for nodes S and D.....	34
Figure 3.1	Illustration of image formats.....	37
Figure 3.2	YUV 4:1:1 subsampling.....	39
Figure 3.3	YUV 4:2:0 subsampling.....	39
Figure 3.4	Typical composition of a video sequence.....	40
Figure 3.5	DCT coding concept.....	42
Figure 3.6	Video frame subdivision into blocks (QCIF format into 22×18 blocks of 8×8 pixels each).....	42
Figure 3.7	8 × 8 blocks of luminance values (visual representation and numerical values) and the resulting DCT transform coefficients (decimal places truncated).....	43
Figure 3.8	Illustration of quantization, $T = Q$	44
