

Association between Plasma Adiponectin Levels and Unstable Coronary Syndromes

Thesis

Submitted for fulfillment of M.Sc. Degree in
Critical Care Medicine

Presented by

Ahmed Mohamed Ali El Maghraby
(M.B. B.C.H.)

Supervised by

Prof. Dr. Ashraf Wadie Andraos
Assistant professor of critical care medicine
Faculty of Medicine
Cairo University

Prof. Dr. Mervat Mohamed El Damarawy
Professor & head of critical care dept
Theodor Bilharz Research Institute

Dr. Emad El Deen Omar
Lecturer of critical care medicine
Faculty of Medicine
Cairo University

Faculty of Medicine
Cairo University
2010

Acknowledgment

*First and foremost, I feel always deeply indebted to **ALLAH**, the Most Gracious and the Most Merciful.*

*I would like to express my sincere gratitude to **Prof. Dr. Hassan Khalid** Professor of Critical Care Medicine and Chief of Critical Care Medicine Department, Cairo University.*

*I would like to express my deepest gratitude and cardinal appreciation to Prof. Dr. **Ashraf Wadie**, Assistant Professor of critical care medicine, Faculty of medicine, Cairo University, who kindly supervised and motivated the performance of this work, for his kind guidance and constant encouragement throughout this work.*

*I am greatly honored to express my sincere appreciation to Prof. Dr. **Mervet El Damarawy**, Professor & Head of critical care dept., Theodor Bilharz Research Institute, for devoting part of her precious time to help me in the preparation of this work.*

*I am greatly honored to express my deep thankfulness to Dr. **Emad El Deen Omar**, Lecturer of Cardiology, Faculty of medicine, Cairo University, for his continuous support, help and generous advice throughout this work.*

*I would like to thank Prof. Dr. **Nihal El ASLY** Assistant Professor of clinical pathology, Theodor Bilharz Research Institute, for her great effort in fulfilling this work.*

I am very grateful to all my staff members and my colleagues in the department of Critical care, in Theodor Bilharz Research Institute and Faculty of medicine, Cairo University, for their help and support throughout the course of the work.

Finally, I am most grateful to my family for their patience and everlasting support.

Abstract

Aims and Objectives: Obesity is established risk factor for coronary artery disease and acute coronary syndrome (ACS). Association between obesity and ACS are independent of other traditional risk factors suggestive of possible contribution of other fat related mediators like adiponectin. Adiponectin is a recently discovered adipocyte-specific cytokine which, in contrast to other adipokines, has anti-inflammatory, anti-thrombotic, and anti-atherogenic properties. It is abundant in the plasma of normal subjects, but decreased in conditions such as obesity and type 2 diabetes mellitus. Furthermore in healthy individuals, low plasma adiponectin levels have been associated with increased risk of cardiovascular events. Present study evaluates the relationship between adiponectin and ACS. The association between plasma adiponectin levels and coronary lesion severity on coronary angiography (CAG) was also assessed using Gensini score.

Methods and Results: Thirty patients with acute coronary syndromes(ACS) undergoing CAG in critical care department of Cairo University from April 2009 to April 2010 were enrolled and divided into three subgroups according to presentation-patients with ST elevation myocardial infarction (STEMI) (n = 10) , with Non ST elevation myocardial infarction (NSTEMI) (n = 12) and with unstable angina(UA), in addition to nineteen apparently normal volunteers as a control group, comparable in age, gender, waist to hip ratio and BMI. After statistical analysis, patients with ACS were found to have lower adiponectin (4.55 ± 2.78 $\mu\text{g/ml}$) level than control group (9.01 ± 3.2 $\mu\text{g/ml}$) and the difference was statistically significant ($p < 0.001$). Moreover, lower levels of adiponectin were associated with more severe coronary artery lesion evaluated by Gensini score ($p < 0.0001$). Furthermore, A significant difference was reported between three subgroups regarding the severity of CAD evaluated by **Gensini score**, where more severe conditions were reported in the NSTEMI than in the STEMI than in the unstable angina group (98.67 ± 34.04 , 85.9 ± 35.32 and 25.25 ± 11.94 , $P < 0.0001$ respectively).

Conclusion: Present study concludes that lower adiponectin levels are independently associated with higher risk of ACS and more severe coronary lesions.

Key words: acute coronary syndrome, adiponectin, Gensini score, coronary angiography.

Table of Contents

List of Abbreviation

ACC	: American College of Cardiology
ACE	: Angiotensin converting enzyme
Acrp30	: adipocyte complement related protein of 30 kDa
ACS	: acute coronary syndrome
AdipoR1	: adiponectin receptor
ADP	: adenosine diphosphate
AHA	: American Heart Association
AMI	: acute myocardial infarction
AMPK	: activated protein kinase
apM1	: adipose Most abundant gene transcript-1
apoE	: apolipoprotein E
ASSENT	: The Assessment of the Safety and Efficacy of a New Thrombolytic Regimen
AST	: Aspartate aminotransferase
bFGF	: basic fibroblast growth factor
BMI	: body mass index
BMI	: body mass index
SS	: severity score
CAD	: coronary artery disease
CAD	: coronary artery disease
CCT	: Coronary computed tomography
CIMT	: common carotid artery intima-media thickness
CK	: creatine kinase
CMR	: Cardiovascular magnetic resonance

COMM IT	: Clopidogrel and Metoprolol in Myocardial Infarction Trial
CRP	: C-reactive protein
CURE	: Clopidogrel in Unstable angina to prevent recurrent ischemic Events
DIGAMI	: Diabetes mellitus insulin-glucose infusion in acute myocardial infarction
DNA	: Deoxyribonucleic Acids
EC	: endothelial cell
ECG	: Electrocardiogram
EGF	: epidermal growth factor
eNOS	: endothelial NO synthase
ERK	: extracellular signal-related kinase
ES	: extent score
ET	: endothelin
FA	: Fatty acid
fAd	: full-length adiponectin
FBF	: forearm blood flow
GBP-28	: gelatin-binding protein of 28 kDa
GH	: Growth hormone
GISSI	: Gruppo Italiano per lo Studio della Sopravvivenza nell'infarto Miocardico
GP	: glycoprotein
GPCR	: G protein- coupled receptor.
GRACE	: The global registry of acute coronary events
HB-EGF	: heparin-binding epidermal growth factor
