**(2012)**

## Acknowledgment

First of all, I thank Allah, the source of all knowledge, for helping me throughout this work. And gave me the power to continue.

My great appreciation and deepest gratitude are addressed to **prof. Abdel Nasser Badawi Singab**, Professor of pharmacognosy, Dean of faculty of pharmacy-Ain Shams University for suggesting the research point and supervision of this thesis, gave me valuable instructions, scientific guidance and continuous encouragement throughout the course of the practical work and helping me in biology work , NMR interpretation and writing the thesis.

My deepest thanks, and everlasting appreciation to **prof.Kamilia Fouly Taha**, Professor of pharmacognosy, Applied Research Center for Medicinal Plants in the National Organization for Drug Control and Research, for her supervision of this thesis, overwhelming support , valuable scientific opinions throughout the practical work and writing.

My deepest thanks to botanist specialist agricultural engineer\ Therese Labib Youssef in Orman garden herbarium for her help in bringing the plant samples and identified the plant

My everlasting appreciation and sincere indebtedness to **Assoc. prof/Hesham A.El-Beshbishy**. Assistant professor of Clinical Biochemistry and Molecular Biology,Faculty of Applied Medical Sciences, Taibah University, Al-Madinah Al-Munawarah, Saudi Arabia for carrying out the biological studies.

My deep gratitude to **Assoc. prof\ Ziad Moussa**,Chemistry departement Faculty of Science, Taibah University, Al-Madinah Al-Munawarah, Saudi Arabia for carrying out the NMR studies.

My deep gratitude to **prof \Sedky Bolous**,Professor of botany, Botany department, Desert research center for carrying out the botanical study

Appreciation is expressed to all my colleagues in the Department of Pharmacognosy, Faculty of Pharmacy, Ain Shams University, and my colleagues at the Applied Research Center for Medicinal Plants, NODCAR, specially ***Dr. Gamal Ghazal, Dr. Gouda Talaat, Dr. Waleed Gamal El Din and Dr. ZeinabTalaat.***

Finally a special gratitude is acknowledged to my great father, my great mother, my sister, my husband and my friends for their persistent help, true sympathy, honest prayers, and encouragement throughout the course of thesis.

*Haidy Sayed*

| 5. Photograph of transverse section in midrib(x250).                                                                                                                                                                                                | 68   |
| 6. Photograph of mesophyll (x250).                                                                                                                                                                                                                  | 69   |
| 7. Photograph of epidermis, palisade and spongy tissues.                                                                                                                                                                                            | 69   |
| 8. Photograph of wavy lower epidermis of young leaf (x250).                                                                                                                                                                                         | 70   |
| 9. Photograph of upper epidermis had no stomata(x250).                                                                                                                                                                                              | 70   |
| 10. Photograph of lower epidermis had anomocytic type stomata(x250)                                                                                                                                                                                 | 71   |

|                                                                                                                                                                                                                                                                     |     |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|
| 11. DPPH free radical scavenging activity of different fractions obtained from air dried powdered leaves of jack fruit ( <i>Artocarpus heterophyllus</i> Lam).                                                                                                      | 73  |
| 12. DPPH free radical scavenging activity of different fractions obtained from air dried powdered leaves of bread fruit ( <i>Artocarpus altilis</i> Fosberg).                                                                                                       | 73  |
| 13. Comparison between DPPH free radical scavenging activity of different fractions obtained from air dried powdered leaves of bread fruit ( <i>Artocarpus altilis</i> Fosberg) and air dried powdered leaves of jack fruit ( <i>Artocarpus heterophyllus</i> Lam). | 74  |
| 14. Ferrous chelating activity of different fractions obtained from air dried powdered leaves of jack fruit ( <i>Artocarpus heterophyllus</i> Lam).                                                                                                                 | 75  |
| 15. Standard calibration curve of gallic acid equivalent.                                                                                                                                                                                                           | 89  |
| 16. Standard calibration curve of quercetin.                                                                                                                                                                                                                        | 91  |
| 17. Scheme for chromatographic fractionation of n-butanol extract of the air dried powdered leaves of <i>A. heterophyllus</i> Lam.                                                                                                                                  | 95  |
| 18. <sup>1</sup> H-NMR (CD <sub>3</sub> OD, 400 MHz) of compound <u>1</u> : 3,4, 5-trihydroxybenzoic acid (gallic acid).                                                                                                                                            | 100 |
| 19. <sup>13</sup> C-NMR (CD <sub>3</sub> OD, 100 MHz) of compound <u>1</u> : 3,4, 5-trihydroxybenzoic acid (gallic acid).                                                                                                                                           | 101 |
| 20. <sup>1</sup> H-NMR spectrum of compound <u>2</u> (CD <sub>3</sub> OD, 400 MHz): quercetin-3- <i>O</i> - $\alpha$ -rhamnosyl (1 $\rightarrow$ 6)- $\beta$ -glucoside (rutin).                                                                                    | 106 |
| 21. <sup>13</sup> C-NMR spectrum of compound <u>2</u> : quercetin-3- <i>O</i> - $\alpha$ -rhamnosyl (1 $\rightarrow$ 6)- $\beta$ -glucoside (rutin).                                                                                                                | 107 |

|                                                                                                                                                  |     |
|--------------------------------------------------------------------------------------------------------------------------------------------------|-----|
| 22. HSQC-NMR spectrum of compound <u>2</u> : quercetin-3- <i>O</i> - $\alpha$ -rhamnosyl (1 $\rightarrow$ 6)- $\beta$ -glucoside (rutin).        | 108 |
| 23. $^1\text{H}$ -NMR ( $\text{CD}_3\text{OD}$ , 400 MHz) of compound <u>3</u> : quercetin -3- <i>O</i> - $\beta$ -glucoside (isoquercitrin).    | 113 |
| 24. $^{13}\text{C}$ -NMR ( $\text{CD}_3\text{OD}$ , 100 MHz) of compound <u>3</u> : quercetin -3- <i>O</i> - $\beta$ -glucoside (isoquercitrin). | 114 |
| 25. HSQC-NMR of compound <u>3</u> : quercetin -3- <i>O</i> - $\beta$ -glucoside (isoquercitrin).                                                 | 115 |
| 26. $^1\text{H}$ -NMR spectrum of compound <u>4</u> ( $\text{CD}_3\text{OD}$ , 400 MHz):3, 4', 5,7-tetrahydroxyflavone (kaempferol).             | 120 |
| 27. $^{13}\text{C}$ -NMR spectrum of compound <u>4</u> ( $\text{CD}_3\text{OD}$ , 100 MHz):3, 4', 5, 7-tetrahydroxyflavone (kaempferol).         | 121 |
| 28. HSQC-NMR spectrum of compound <u>4</u> : 3, 4', 5, 7-tetrahydroxyflavone (kaempferol).                                                       | 122 |
| 29. $^1\text{H}$ -NMR spectrum of compound <u>5</u> : Apigenin 7- <i>O</i> - $\beta$ -D-glucopyranoside.                                         | 126 |
| 30. GLC analysis of fatty acids methyl esters of the saponifiable matter of air dried leaves of <i>Artocarpus heterophyllus</i> Lam.             | 129 |

| 9. Pharmacopial constants of the leaves of <i>A. heterophyllus</i> Lam and <i>A. altilis</i> Fosberg.                                                                                       | 86  |
| 10. Results of preliminary phytochemical screening for detection of different phytochemical constituents in both <i>Artocarpus heterophyllus</i> Lam and <i>Artocarpus altilis</i> Fosberg. | 87  |
| 11. The absorbance measured for different concentrations of standard gallic acid solutions.                                                                                                 | 89  |
| 12. The absorbance measured for different concentrations of standard quercetin solutions.                                                                                                   | 90  |
| 13. Results of paper chromatography of free sugars of defatted air dried leaves powder of <i>A. heterophyllus</i> Lam.                                                                      | 92  |
| 14. Results of paper chromatography of hydrolysed combined sugars of defatted air dried leaves powder of <i>A. heterophyllus</i> Lam.                                                       | 93  |
| 15. Results of column chromatographic analysis of F-2.                                                                                                                                      | 96  |
| 16. Physicochemical, chromatographic and spectral data of C <u>1</u> .                                                                                                                      | 98  |
| 17. Physicochemical, chromatographic and spectral data of compound C <u>2</u> .                                                                                                             | 102 |
| 18. Physicochemical, chromatographic and spectral data of compound C <u>3</u> .                                                                                                             | 109 |
| 19. Physicochemical, chromatographic and spectral data of compound C <u>4</u> .                                                                                                             | 117 |
| 20. Physicochemical, chromatographic and spectral data of compound C <u>5</u> .                                                                                                             | 123 |
| 21. GLC analysis of fatty acids methyl esters of the lipoidal matter of leaves of <i>Artocarpus heterophyllus</i> Lam.                                                                      | 129 |

|                                                                 |     |
|-----------------------------------------------------------------|-----|
| 22. GC\Ms of sterols and hydrocarbon of unsaponifiable fraction | 131 |
| of leaves of <i>Artocarpus heterophyllus</i> Lam.               |     |
