**INVESTIGATION OF BOTANICAL AND MICROBIAL  
AGENTS OF BIOLOGICAL ACTIVITY AGAINST  
CERTAIN DISEASE VECTORS**

A Thesis

Submitted to the Faculty of Science

Ain Shams University

For the award of Ph.D. Degree  
(In Entomology)

By

**Amina Rashad Ali Abu-Basuni**

B.Sc. & M.Sc. (Entomology)

**Supervised by:**

**Prof. Dr.       Mohamed Saad Hamed**

**Prof. Dr.       Sameeh A. Mansour**

**Prof. Dr.       Mahmoud A. Abd El-Ghaffar**

**Asst. Prof. Dr.   Adel Ramzy Fahmy**

## **Board of Supervision**

### **Prof. Dr. Mohamed Saad Hamed**

Professor of Entomology

Faculty of Science

Ain Shams University

### **Prof. Dr. Sameeh A. Mansour**

Professor of Pesticides & Environmental Toxicology

National Research Centre.

### **Prof. Dr. Mahmoud A. Abd El-Ghaffar**

Professor of Polymer Chemistry & Technology

National Research Centre.

### **Asst. Prof. Dr. Adel Ramzy Fahmy**

Assistant Professor of Entomology

Faculty of Science

Ain Shams University

## **Biography:**

**Date and place of birth:** ٢٠, October, ١٩٧٧, Algeria

**Date of Graduation:** June, ١٩٩٧

**Degree awarded:** B.Sc. (Special Entomology), ١٩٩٧

M.Sc. ٢٠٠٤

**Grade:** Excellent

**Occupation:** Assistant Researcher,  
Pesticide Chemistry Dept.,  
National Research Centre.

**Date of Regestration**

**For the Ph.D. Degree:** ٧, August, ٢٠٠٦

## ACKNOWLEDGEMENT

I am deeply thankful to **Allah**, by the grace of whom, the present work was realized.

**I wish to express my sincere gratitude and my appreciation to:**

**Prof. Dr. Mohamed Saad Hamed**

Professor of Entomology  
Faculty of Science  
Ain Shams University

**Prof. Dr. Sameeh A. Mansour**

Professor of Pesticides & Environmental  
Toxicology  
National Research Centre.

**Prof. Dr. Mahmoud A. Abd El-Ghaffar**

Professor of Polymer Chemistry & Technology  
National Research Centre.

**Assistant Prof. Dr. Adel Ramzy Fahmy**

Professor of Entomology  
Faculty of Science  
Ain Shams University

For suggesting the subject, supervising this work, for their continuous encouragement, kind help, indispensable advice and valuable comments they displayed during the course of this study and for reading and correcting the manuscript. It was a great honor to learn on their hands the basis of the scientific research.

I am so grateful to **Prof. Dr. Souad E. EL-Gengaihi**, Phytochemical Science Department, National Research Centre, for her unlimited kind help for identifying the plants used in this study.

All thanks and appreciation for Prof. Dr. **Magdy Ayoup**, head of Polymeric Chemistry Dept., National Research Centre, for his continued support.

Deep gratitude to **Dr. Mohamed Abd EL-All**, Kato Aromatic Company, for his efforts in providing me with the analytical data of the plant oils and for his precious help.

No words can explain my sincere gratitude to my dear **Dr. Samia Shoukry** for giving me her experience in scientific research field and helping me to overthrow my first steps in my scientific pathway.

The author is indebted with sincere gratitude to the **President of National Research Center**, for the facilities provided for such an accomplishment.

Finally, I wish to thank all colleagues in the Department of Pesticide Chemistry, National Research Centre, Dokki, Egypt, especially my dear college, **Reham Ibrahim** for her help and support.

## Abstract

The present study was carried out to evaluate the toxic effect of nine plant oils (e.g., *Anethum graveolens*, *Apium graveolens*, *Carum carvi*, *Curcuma longa*, *Cuminum cyminum*, *Foeniculum vulgare*, *Melia azedarach*, *Petroselinum crispum* and *Piper nigrum*) in addition to four commercial insecticides [e.g., malathion® (50% EC), spinosad (Tracer® 12% SC), agerim® (WP – 32,000 IU/mg), and tebufenozide (Mimic®, 30% EC)] and two bacillus species toxins against larvae and adult of *Culex pipiens* and *Musca domestica*. Some biological aspects, the joint action, the synergistic effect were studied and the developmental changes resulted from treating the tested insects with LC<sub>50</sub> concentration level were also recorded. The phytochemical screening were carried out to detect the effective chemical groups in the tested oils then the oils were analyzed by GC/MS. Natural formulations were then prepared using the tested oils in different pesticidal preparations, i.e. EC, WP, CRF (Controlled Release Formulation), repellency tablets, sugar bait and paired mixture discs and tested for their efficacy against the targeted insects. Their residual toxicity was also evaluated.

The present findings clear that, all the tested oils showed high toxicity against larval and adult stages of *C. pipiens* and *M. domestica* and cumin oil resulted in the highest repellency effect. Among the tested insecticides, spinosad was the most effective. The tested oils proved to have IGR properties when compared with mimic and caused severe shortage in stage's period. Many morphological changes and abnormalities were also detected. The joint action and synergistic studies indicated the synergistic effect of the tested oils when they mixed together or with the tested insecticides. Also the non-lethal concentration of spinosad and agerim have synergized the tested oils toxicity. Results showed that, Bti toxin was more toxic than Bs when they were tested against larvae and adults of mosquito and

housefly. Synergism was proved by mixing tested oils at LC<sub>50</sub>. concentration level was mixed with the non-lethal concentration (LC<sub>10</sub>) of the two *Bacillus* toxins. Studies on prepared oils formulations indicated that these formulations have improved the toxicity and prolonged their storage time.

**Key words:** *Culex pipiens*- *Musca domestica*- Essential oils- Bacterial toxins- IGRs- Insecticides- Pesticide formulations - WP- EC - CRF- Toxicological and Biological activities, Joint action, synergistic effect, Phytochemical screening, GC/MS analysis.
