2017**

## Abstract

**Introduction:** The technical developments have led to bronchoscopy being used in complex diagnostic as well as therapeutic procedures. Interventional bronchoscopy is defined as diagnostic and invasive therapeutic interventions that extend beyond routine flexible bronchoscopy. Interventional bronchoscopy has come a long way with exciting new techniques added to the pulmonologist's armamentarium encompassing both diagnostic as well as therapeutic procedures.

**Aims:** To study the outcomes of ITB in a dedicated bronchoscopy unit as regard bronchoscopic outcomes of the two main practices: Central (benign or malignant) airway obstruction (CAO) and foreign body (FB) extraction.

**Methodology:** This was a retrospective-prospective study design initiated in January 2014 in which patients undergoing ITB in Bronchoscopy unit, Chest department, Ain Shams University previously during period between January 2012 and December 2013 (retrospective part) or subsequently during period between January 2014 till June 2015 (prospective part) were included in the current study. The study included 180 patients, divided into 78 patients in the retrospective part and 102 patients in the prospective part.

**Results:** One hundred and eighty patients fluffed the study inclusion criteria and were recruited from Bronchoscopy unit, Chest department, Ain Shams University during the study period. The retrospective part of the study (between January 2012 and December 2013) included 78 patients and prospective part of the study (between January 2014 till June 2015) included 102 patients.

**Conclusion:** ITB is an effective and a promising treatment approach for palliative treatment of patients with malignant and benign CAO.

**Recommendations:** Future researches are needed on larger number of patients and long study duration. High degree of suspicion of FB inhalation is critical for patients with unresolved chest symptoms.

**Keywords:** Interventional Therapeutic Bronchoscopy, Dedicated Bronchoscopy, Central Airway Obstruction

First of all, thanks to **Allah** whose magnificent help was the main factor in completing this work.

No words can express my deep sincere feelings Towards **Prof. Adel Mahmoud Khattab**, Professor of Chest Diseases, Faculty of Medicine-Ain Shams University for his continuous encouragement, guidance and support he gave me throughout the whole work. It has been a great honor for me to work under his generous supervision.

I would like to express my deepest appreciation, respect and thanks to **Prof. Emad ElDin Abdel Wahab Korraa**, Professor of Chest Diseases, Faculty of Medicine-Ain Shams University, for his continuous guide in all aspects of life beside his great science, knowledge and information.

I would like to express my deepest appreciation, respect and thanks to **Prof. Ashraf Mokhtar Madkour**, Professor of Chest Diseases, Faculty of Medicine-Ain Shams University, for his continuous guide in all aspects of life beside his great science, knowledge and information.

Last but not least, sincere gratitude to *My Family* for their continuous encouragement and spiritual support.

بِسْمِ اللَّهِ الرَّحْمَنِ الرَّحِيمِ

قالوا

سبحانك لا علم لنا  
إلا ما علمتنا إنك أنت  
العليم العظيم

صدق الله العظيم

## **List of Abbreviations**

<b>ABG</b>	: Arterial blood gas
<b>AFB</b>	: Autofluorescence bronchoscopy
<b>APC</b>	: Argon plasma coagulation
<b>BUN</b>	: Blood urea nitrogen
<b>CAO</b>	: Central airway obstruction
<b>CO<sub>2</sub></b>	: Carbon dioxide
<b>COPD</b>	: Chronic Obstructive Pulmonary Disease
<b>CPAP</b>	: Continuous positive airway pressure
<b>CT</b>	: Computed tomography
<b>CXR</b>	: Chest X ray
<b>D</b>	: Dilation
<b>EBRT</b>	: External-beam radiation therapy
<b>EBUS</b>	: Endobronchial ultrasound
<b>EC</b>	: Electrocautery
<b>ECG</b>	: Electrocardiogram
<b>FB</b>	: Foreign body
<b>FBI</b>	: Foreign body inhalation
<b>FEV1</b>	: Forced expiratory volume in 1 second

## *List of Abbreviations*

---

<b>FIO<sub>2</sub></b>	: Fraction of inspired oxygen
<b>FOB</b>	: Fibroptic Bronchoscopy
<b>HDR</b>	: High-dose-rate
<b>IB</b>	: Interventional Bronchoscopy
<b>IBV</b>	: Intrabronchial valves
<b>ICU</b>	: Intensive care unit
<b>INR</b>	: International normalized ratio
<b>IP</b>	: Interventional Pulmonologist
<b>ITB</b>	: Interventional therapeutic Bronchoscopy
<b>LDR</b>	: Low-dose-rate
<b>MD</b>	: Mechanical debridement
<b>MMRC</b>	: Modified medical research council
<b>N<sub>2</sub>O</b>	: Nitrous oxide
<b>NSCLC</b>	: Non-small cell lung cancer
<b>PaO<sub>2</sub></b>	: Partial pressure of O <sub>2</sub> in arterial blood.
<b>PDT</b>	: Photodynamic therapy
<b>RB</b>	: Rigid bronchoscopy
<b>ROS</b>	: Reactive oxygen species
<b>SaO<sub>2</sub></b>	: Oxygen saturation

## Introduction

The technical developments have led to bronchoscopy being used in complex diagnostic as well as therapeutic procedures.<sup>(1)</sup> Interventional bronchoscopy is defined as diagnostic and invasive therapeutic interventions that extend beyond routine flexible bronchoscopy.<sup>(2)</sup> Interventional bronchoscopy has come a long way with exciting new techniques added to the pulmonologist's armamentarium encompassing both diagnostic as well as therapeutic procedures.<sup>(1)</sup>

Interventional therapeutic bronchoscopy (ITB) is an evolving field within pulmonary medicine that focuses on application of advanced bronchoscopic techniques for the treatment of various malignant and nonmalignant airway disorders. Therapeutic procedures pertaining to these disorders include, but are not limited to, rigid bronchoscopy (RB), laser bronchoscopy, endobronchial electrosurgery, argon-plasma coagulation, cryotherapy, airway stent insertion, balloon bronchoplasty and dilatation techniques, endobronchial radiation (brachytherapy) and photodynamic therapy.<sup>(1,3)</sup> In addition to four most recent developments with great potential including bronchoscopic lung volume reduction, bronchial thermoplasty used in benign lung
