Study of the magnetic and electrical properties of some garnet ferrites

Thesis

**Submitted for the degree of Master of Science as a partial
Fulfillment for requirement of the Master of Science**

in Physics

By

Ahmed Mohamed Ahmed Ali Faramawy

List of Figures.....I

List of Tables.....VII

Abstract.....1

Introduction.....5

Chapter 1: Theoretical background

1.1 Magnetic materials7

1.2 Types of ferrites8

1.2.1 Spinal ferrites8

1.2.2 Hexagonal ferrites9

1.2.3 Garnet ferrites10

1.2.3.1 Crystal structure of garnet ferrites.....10

1.3 Superexchange interactions in garnet ferrites.....11

1.4 Saturation magnetization in garnet ferrites13

1.5 Domain Theory and Mechanism of Magnetization
Process.....14

1.5.1 Domain Theory14

1.5.2 Magnetization Mechanism..... 15

1.6 Néel's theory of ferrimagnetism for three sublattices
system..... 17

1.7.1 The heating ability (magnetic loss) at high frequency
.....18

1.7.2 The heating ability (magnetic loss) analytical
models..... 21

1.8. Dielectrics properties of garnets.....21

1.8.1 Dipole moment and polarization22

Contents

1.8.2 Macroscopic concept of polarization.....	22
1.8.3. Frequency dependence of the dielectric permittivity.....	23
1.8.4. Frequency dispersion of complex dielectric permittivity.....	25

Chapter 2: Literature Survey

2.1. Yttrium iron garnet (YIG)	26
2.2. Gadolinium iron garnet (GdIG).....	31
2.3. Yttrium Gadolinium Iron Garnets (YGdIG)	33
Aim of the Work.....	37

Chapter 3: Experimental Techniques

3.1 Materials and Procedure.....	39
3.1.1 The standard ceramic method (SC).. ..	39
3.1.2 Co-precipitation method (CP)	41
3.2 Characterization.....	42
3.2.1 X-ray diffraction measurements.....	42
3.2.2 Porosity Measurements.....	43
3.2.3 Infra-Red spectroscopy.....	44
3.2.4 Field emission scanning electron microscope.....	45
3.3 Magnetization measurements	46
3.4 Relative permeability and Curie temperature (T_c).....	48

Contents

3.5 Magnetic losses (Heating ability of the samples) measurement	49
3.5.1 Circuit design and operation.....	49
3.6 Dielectric Measurements	53

Chapter 4: Results and Discussion

4.1 Physical Properties.....	55
4.1.1 X-ray Analysis.....	55
4.1.2 Density and Porosity.....	65
4.1.3 IR Spectral Analysis.....	66
4.1.4 Field Emission Scanning Electron Microscope (FEEM).....	73
4.2 Magnetic Properties	78
4.2.1 Magnetic parameters	78
4.2.2 Temperature Dependence of Relative Permeability ...	86
4.2.3 Composition Dependence of Relative Permeability Near Room Temperature.....	89
4.2.4 Composition Dependence of Curie Temperature.....	91
4.3 Heating ability and magnetic losses at high frequency.....	93
4.3.1 Effect of sample concentration on the heating ability values.....	96
4.4 Electrical properties.....	97
4.4.1 Frequency Dependence of the ac Resistivity	97
4.4.2 Frequency Dependence of the Real Part of the Dielectric Constant	101
4.4.3 Frequency Dependence of the Imaginary a Part of the Dielectric Constant	104

Contents

4.4.4 Composition Dependence of the Dielectric Properties106

Conclusion110

References.....112

ACKNOWLEDGEMENT

*Above all, praise to **ALLAH**, the lord of the world, by whose grace this work has been completed and never leaving me during this stage.*

This work is dedicated to my loving family and my wife, for I would not be who I am today without their love, friendship and everlasting support. I am forever thankful.

*It was honor for me that I could be one of the students of **Prof. Dr. Adel Abd El-Sattar Mohammed**, Physics Department, Faculty of Science, Ain Shams University for his advice and invaluable suggestions especially during writing my thesis to this form. Most important acknowledgment goes to him; he often endures difficulties to devote his time for my research problems.*

*No words could cover my thanks and feeling towards my dissertation advisor **Prof. Dr. Hesham M. El-Sayed**, Physics Department, Faculty of Science, Ain Shams University for proposing and planning this investigation and their continuous encouragements, valuable suggestions, capable supervision and reading throughout the manuscript that have rendered the realization of this work to be possible. The valuable discussions and continuous assistance which were so willingly during the course of this work will never be forgotten.*

Deep thanks to Assoc.Prof.Dr. Waleed Ragab Abd El-Rasheed Agami, Physics Department, Faculty of Science, Ain Shams University for proposing and planning this investigation and his continuous encouragements, valuable suggestions, capable supervision and brotherhood.

I express my deep thanks to all of my lab partners in to Prof. Dr. Ahmed Abd El-Ghany, Physics Department, Faculty of Science, Ain Shams University, for their kind helpful guidance and encouragement during the work.

I would like to deep thank my colleagues in the Magnetism Lab, Physics Department, Dr. Heba kahil, Mohammed Adel, Alaa Mohammed, Mohammed Ashmawy, Ismail Abd El-Rhiem, Ibrahim Ali, and Zeyad Mohammed and my colleagues in CMRDI, M. Rasly, Diaa, Ali, Shalan, , Sanad, Mortada.

Ahmed Faramawy
