

Ischemic stroke among patients with metabolic syndrome with or without type 2 diabetes mellitus

Thesis

**Submitted for The partial fulfillment of Doctorate Degree of
Neurology**

By

**Mohamed Mohamed Tawfik
(M.B.B.Ch., M.Sc)**

Supervised by

Prof. Taha Kamel Aloush
Professor of Neurology
Faculty of Medicine
Ain Shams University

**Prof. Azza Abd-ElNaser
Abd-ElAziz**
Professor of Neurology
Faculty of Medicine
Ain Shams University

Prof. Nagia Ali Fahmy
Professor of Neurology
Faculty of Medicine
Ain Shams University

**Dr. Rania Sayed Abd El-
Baki**
Ass.Professor of Internal
Medicine & Endocrinology
Faculty of Medicine
Ain Shams University

Dr. Doaa Abdallah El-Aidy
Lecturer of Neurology
Faculty of Medicine
Ain Shams University

**Faculty of Medicine
Ain Shams University**

2015

السكتات الدماغية في مرضى المتلازمة الأيضية في وجود أو عدم
وجود النوع الثانى من مرض السكرى
رسالة توطئة للحصول على درجة الدكتوراة في أمراض المخ والأعصاب

مقدمة من
الطبيب/ محمد محمد توفيق البغدادى
ماجستير أمراض المخ والأعصاب والطب النفسى
تحت إشراف

الأستاذ الدكتور/ طه كامل علوش الأستاذة الدكتورة/ عزة عبدالناصر عبدالعزيز

أستاذ أمراض المخ والأعصاب أستاذ أمراض المخ والأعصاب
كلية الطب - جامعة عين شمس كلية الطب - جامعة عين شمس

الأستاذة الدكتورة/ ناجية على فهمى الدكتورة/ رانيا سيد عبد الباقي

أستاذ أمراض المخ والأعصاب أستاذ مساعد أمراض الباطنة والغدد الصماء
كلية الطب - جامعة عين شمس كلية الطب - جامعة عين شمس

الدكتورة/ دعاء عبد الله العايدى

مدرس أمراض المخ والأعصاب
كلية الطب - جامعة عين شمس

كلية الطب
جامعة عين شمس

2015

Acknowledgement

First and before all I thank **God**. I thank him for his great mercy, generous blesses, and for his continuous gifts.

I would like to thank **Prof. Taha Kamel Aloush** Professor of Neurology, Ain Shams University, who was a kind great supportive teacher and father.

Words cannot express the depth of my gratitude to my **Prof. Azza Abd-ElNaser Abd-ElAziz** Professor of Neurology, Ain Shams University, for her generous support and continuous encouragement during this work.

I would like to express my deepest gratitude to **Prof. Nagia Ali Fahmy** Professor of Neurology, Ain Shams University, for her willing help, patience, and support throughout the work.

I would like to thank **Dr. Rania Sayed Abd El-Baki** Ass.Professor of Internal Medicine & Endocrinology, Ain Shams University, for her support and advice.

I am also very grateful to **Dr. Doaa Abdallah El-Aidy** Lecturer of Neurology, Ain Shams University, for her sincere and meticulous supervision and support.

Last but not least, I want to extend my genuine thanks and gratefulness to my family especially **my great mother** who was always encouraging, **my loving wife** who was always supportive and helpful, **my dear sons** who were my motive, and **my wife`s family** for their great supportiveness.

Contents

Acknowledgment.....	I
List of Abbreviations.....	II
List of Figures.....	V
List of Tables.....	IX
Introduction.....	1
Aim of the Work.....	7
Chapter 1: Metabolic Syndrome; Pathophysiology and Relation to Cerebrovascular Stroke.....	8
Chapter 2: Pathophysiology of Type 2 Diabetes Mellitus	41
Chapter 3: Histopathological, Pathophysiological, and Clinical Characteristics of Cerebrovascular Stroke in Type 2 Diabetes Mellitus	58
Subjects and Methods.....	77
Results.....	86
Discussion.....	112
Summary.....	130
Recommendations.....	135
References.....	137
Appendix.....	159
Arabic Summary.....	

List of Abbreviations

(11 β -HSD1)	11 β -hydroxysteroid dehydrogenase type 1
(5-HT)	5-hydroxytryptamine
(AACE)	American Association of Clinical Endocrinologists
(ACA)	Anterior cerebral arteries
(ADRB)	β -adrenergic receptors
(AGEs)	Advanced glycosylation end products
(apoB)	Apolipoprotein B
(ARIC)	Atherosclerosis Risk in Communities
(BA)	Basilar artery
(BMI)	Body mass index
(CD36)	Cluster of differentiation 36
(CHAOS)	Coronary artery disease, hypertension, atherosclerosis, obesity, stroke
(cm)	Centimeter
(CRP)	C-reactive protein
(CT)	Computed tomography
(CVD)	Cardiovascular diseases
(DAG)	Diacylglycerol
(DWMH)	Deep white matter hyperintensity
(ECG)	Electrocardiogram
(EF)	Ejection fraction
(ENHP)	Egyptian National Hypertension Project
(eNOS)	Endothelial nitric oxide synthase
(ER)	Endoplasmic reticulum
(ET-1)	Endothelin-1
(FFA)	Free fatty acids
(FPG)	Fasting plasma glucose
(G-6-P)	Glucose 6-phosphate
(GIP)	Glucose-dependent insulintropic peptide
(GLP-1)	Glucagon-like peptide1
(GLUT4)	Glucose transporter 4

(HbA1c)	Hemoglobin A1C
(HDL)	High density lipoprotein cholesterol
(HK)	Hexokinase
(HPA)	Hypothalamo-hypophyseal-adrenal axis
(HTN)	Hypertension
(IAPP)	Islet associated polypeptide
(ICA)	Internal carotid artery
(ICS)	Intracranial stenosis
(IDF)	International Diabetes Federation
(IFG)	Impaired fasting glucose
(IGT)	Impaired glucose tolerance
(IL6)	Interleukin-6
(IMT)	Intima-media thickening
(IRS)	Insulin receptor substrates
(ISHD)	Ischemic heart disease
(JNK)	Jun kinase
(kg/m ²)	Kilogram/meter ²
(LAD)	Left atrial diameter
(LCFA)	Long chain fatty acid
(LDL)	Low-density lipoprotein cholesterol
(LVH)	Left ventricular hypertrophy
(MAPK)	Mitogen-activated protein kinase
(MCA)	Middle cerebral arteries
(mg/dL)	Milligram/deciliter
(MI)	Myocardial infarction
(mm Hg)	Millimeter mercury
(mmol/L)	Millimole/liter
(MRA)	Magnetic resonance angiography
(MRI)	Magnetic resonance imaging
(NASCET)	North American Symptomatic Carotid Endarterectomy Trial
(NCEP ATPIII)	National Cholesterol Education Program Adult Treatment Panel III
(NIHSS)	National Institutes of Health Stroke Scale
(NO)	Nitric oxide

(OGTT)	Oral glucose tolerance test
(PAI-1)	Plasminogen activator inhibitor-1
(PC)	Pyruvate carboxylase
(PCA)	Posterior cerebral arteries
(PDH)	Pyruvate dehydrogenase
(PDPK-1)	3-phosphoinositide-dependent protein kinase-1
(PFK-1)	Phosphofructo-1-kinase
(PI3-K)	Phosphoinositide 3-kinase
(PKB)	Protein Kinase B also known as (Akt)
(PKC)	Protein kinase C
(PPAR γ)	Peroxisome proliferator-activated receptor
(PVH)	Periventricular hyperintensity
(RAGE)	Receptors for advanced glycosylation endproducts
(RAS)	Renin-Angiotensin system
(RBP4)	Retinol-binding protein 4
(ROS)	Reactive oxygen species
(T2DM)	Type 2 Diabetes mellitus
(TAFI)	Thrombin-activatable fibrinolysis inhibitor
(TCD)	Transcranial Doppler sonography
(TGF- β)	Transforming growth factor- β
(TGs)	Triglycerides
(TIAs)	Transient ischemic attacks
(TNF- α)	Tumor necrosis factor- α
(TOAST)	Trial of Org10172 in Acute Stroke Treatment
(TOF)	Three-dimensional Time-Of-Flight
(UDP-GlcNAc)	Uridine diphosphate N-acetylglucosamine
(VCAM-1)	Vascular cell adhesion molecules
(VLDL)	Very low density lipoprotein cholesterol
(WASID)	Warfarin-Aspirin Symptomatic Intracranial Disease
(WHO)	World Health Organization
($\mu\text{g}/\text{min}$)	Microgram/minute

Table (12)	The distribution of sites of the intracranial arterial lesion in the 2 groups.	Page 108
Table (13)	Difference between the 2 groups as regard obstructive and nonobstructive intracranial arterial lesions.	Page 110
Table (14)	The difference between the 2 groups as regard single and multiple (ICS).	Page 111

Metabolic syndrome is a combination of medical disorders that, when occurring together, increase the risk of developing cardiovascular diseases including strokes. It affects one in five people in the United States and prevalence increases with age. Metabolic syndrome is also known as metabolic syndrome X, cardiometabolic syndrome, syndrome X, insulin resistance syndrome, Reaven's syndrome and (CHAOS) that stands for coronary artery disease, hypertension, atherosclerosis, obesity and stroke (**Renaldiet al, 2009**).

The pathophysiology of metabolic syndrome is extremely complex and has been only partially explained. Development of visceral fat, increased plasma levels of tumor necrosis factor- α (TNF- α) and interleukin-6 (IL6) and altered levels of a number of other substances (e.g., adiponectin, resistin) play a pivotal role. It is not contested that cardiovascular risk factors tend to cluster together, but what is contested is the assertion that the metabolic syndrome is anything more than the sum of its constituent parts (**Narasimhan and Raynor, 2010**).

Components of the so called (metabolic syndrome) were frequently found in stroke patients and patients with
