Analytical Study of Certain Thiazide and Thiazide-Like Diuretics

615761

A Thesis Presented by

Mahmoud Ahmad Omar Hassan

م. أحمد

B. Sci. Pharmaceutical Sciences, Al-Azhar University (1994)
M. Sci., Pharmaceutical Analytical Chemistry, Assiut University (1999)

Submitted for the degree of doctor of philosophy in pharmaceutical sciences
(Analytical Chemistry)

Under Supervision of

Prof. Dr.

Michael E. El-Kommos

Professor and Head of Pharmaceutical Analytical
Chemistry Department
Faculty of Pharmacy, Assiut University

Prof. Dr.

Ahmad A. Ahmad

Professor of Organic Chemistry and
Vice Dean of Faculty of Science,
Minia University

Dr.

Hesham S. Sharaf El-Din

Associate Professor, Head of Analytical Chemistry Department
and Vice Dean of Faculty of Pharmacy, Minia University

Minia University (EGYPT)
2005

MA

APPROVAL SHEET

Name of the Student

Mahmoud Ahmad Omar Hassan

Title of The Thesis

" Analytical Study of Certain Thiazide and Thiazide-Like Diuretics "

Degree

Doctor of Philosophy in Pharmaceutical Sciences

(Analytical Chemistry)

The committee in charge has approved this thesis on 16/5/2005

Name and Degree	Signature
Prof. Dr. Hamed M. El-Fatraty Prof. of Anal. Chem., Faculty of Pharmacy, Tanta university	
Prof. Dr. Michael E. El-Kommos Prof. and Head of Pharm. Anal. Chem. Dep., Faculty of Pharmacy, Minia university	
Prof. Dr. Gamal A. Saleh Prof. of Pharm. Anal. Chem., Faculty of Pharmacy, Assiut university	
Prof. Dr. Ahmad A. Ahmad Prof. of Org. Chem. and Vice Dean, Faculty of Science, Minia university	
Dr. Hesham S. Sharaf El-Din Associate Prof. Head of Anal. Chem. Dep. and Vice Dean, Faculty of Pharmacy, Minia university	

To my family

List of Abbreviations

a	Intercept
b	Slope
BD	Bendroflumethiazide
BZ	Benzthiazide
CD	Chlorthalidone
CP	Clopamide
HC	Hydrochlorothiazide
HF	Hydroflumethiazide
IP	Indapamide
XP	Xipamide
K _s	Stability constant
LOD	Limit of Detection
LOQ	Limit of Quantitation
Log	Logarithm
r	Correlation coefficient
RFI	Relative fluorescence intensity
SD	Standard deviation
TLC	Thin layer chromatography
μg	Microgram
ε	Molar absorptivity
NBD-Cl	4-chloro-7-nitrobenzofurazan
SDS	Sodium dodecyl sulphate

Contents

	Page
List of Abbreviations	ii
List of tables	iii
List of figures	v
1. General introduction	1
2. Spectrophotometric determination of some thiazide and thiazide-like diuretics using ferric hydroxamate method	25
2.1. Experimental	25
2.2. Results and Discussion	31
3. Spectrophotometric determination of some thiazide and thiazide-like diuretics using ferricyanide method	56
3.1. Experimental	56
3.2. Results and Discussion	61
4. Spectrofluorimetric determination of thiazide and thiazide-like diuretics using 4-chloro-7-nitrobenzofurazan	82
4.1. Experimental	82
4.2. Results and Discussion	87
5. Summary and conclusions	100
6. References	104
7. Summary in Arabic	

Table		Page
14	Analysis of the studied drugs in their pharmaceutical dosage forms	81
15	Effect of different solvents on the reaction between the investigated drugs and NBD-Cl	91
16	Quantitative parameters for the reaction of the investigated drugs with NBD-Cl reagent	95
17	Analysis of the studied drugs in their pharmaceutical dosage forms	99

List of Tables

Table	Page
1 The investigated thiazide diuretics	5
2 The investigated thiazide-like diuretics	6
3 Reported HPLC methods for the determination of thiazide and thiazide-like diuretics	12
4 Quantitative parameters for the reaction of hydroxamates of investigated drugs with ferric chloride reagent	46
5 Calculated stability constants of the reaction of the investigated drugs with ferric chloride	48
6 Correlation between the logarithms of calculated stability constants of the resulting ferric chelates and logarithms of molar absorptivities	49
7 Stability indicating properties and kinetic parameters for the assay of investigated drugs based on ferric hydroxamate formation	50
8 Effect of commonly used excipients on the determination of investigated drugs	51
9 ¹ H-NMR data (δ , ppm) for xipamide and its hydroxamic acid derivative (measured in d ₆ -DMSO).....	53
10 Analysis of the studied drugs in their pharmaceutical dosage forms	55
11 Effect of type of base on the reaction of the investigated drugs with potassium ferricyanide	75
12 Effect of type of acid on the reaction of the investigated drugs with potassium ferricyanide	76
13 Quantitative parameters for the reaction of the investigated drugs with potassium ferricyanide	79

Figure		Page
9	Effect of ferric chloride concentration on the reaction between the hydroxamates of investigated drugs ($\mu\text{g/mL}$) and ferric chloride reagent	41
10	Effect of time on the reaction between the hydroxamates of investigated drugs ($\mu\text{g/mL}$) and ferric chloride reagent	43
11	Calibration curves of the ferric hydroxamates of hydrochlorothiazide, indapamide, benzthiazide and bendroflumethiazide	44
12	Calibration curves of the ferric hydroxamates of chlorthalidone, xipamide, clopamide and hydroflumethiazide	45
13	Job's plots of continuous variation between the hydroxamates of investigated drugs and ferric chloride reagent	47
14	Absorption spectra of xipamide, ($4 \mu\text{g/mL}$), potassium ferricyanide, ($6 \mu\text{g/mL}$) and xipamide ($8 \mu\text{g/mL}$)-ferricyanide complex	62
15	Absorption spectra of hydrochlorothiazide, ($4 \mu\text{g/mL}$), clopamide, ($4 \mu\text{g/mL}$) and chlorthalidone, ($10 \mu\text{g/mL}$) with potassium ferricyanide reagent	63
16	Absorption spectra of bendroflumethiazide, ($4 \mu\text{g/mL}$), benzthiazide, ($4 \mu\text{g/mL}$) and indapamide, ($10 \mu\text{g/mL}$) with potassium ferricyanide reagent	64
17	Effect of sodium hydroxide concentration on the reaction between the investigated drugs ($\mu\text{g/mL}$) and potassium ferricyanide reagent	65

List of Figures

Figure		Page
1	Absorption spectra of xipamide , (4µg/mL), ferric chloride, (6 µg/mL) and resulting ferric hydroxamate of xipamide (0.8 µg/mL)	32
2	Absorption spectra of the resulting ferric hydroxamates of clopamide (0.8 µg/mL), indapamide (1.6 µg/mL) and benzthiazide (1.6 µg/mL)	33
3	Absorption spectra of the resulting ferric hydroxamates of hydrochlorothiazide (1.6 µg/mL), hydroflumethiazide (0.8 µg/mL), chlorthalidone (0.4 µg/mL) and bendroflumethiazide (1.6 µg/mL)	34
4	Effect of hydroxylamine concentration on the reaction between the hydroxamates of investigated drugs (µg/mL) and ferric chloride reagent	35
5	Effect of sodium hydroxide concentration on the reaction between the hydroxamates of investigated drugs (µg/mL) and ferric chloride reagent	36
6	Effect of temperature on the reaction between the hydroxamates of investigated drugs (µg/mL) and ferric chloride reagent	38
7	Effect of heating time on the reaction between the hydroxamates of investigated drugs (µg/mL) and ferric chloride reagent	39
8	Effect of hydrochloric acid concentration on the reaction between the hydroxamates of investigated drugs (µg/mL) and ferric chloride reagent	40
