

Innovative Chemical Sensors for the Assessment of Some Industrial Products and Hazardous Wastes

"Submitted for the degree of Master of Science As a
partial fulfillment for requirements of the master of
Science"

Presented by

Amiyna -A- Abd Alhafith

Supervised by

Prof. Dr. Ayman Helmy Kamel

Professor of Analytical Chemistry, Chemistry
Department, Faculty of Science, Ain Shams University.

Dr. Amr Ali Mohamed

Lecturer of Inorganic Chemistry, Faculty of
Science, Ain Shams University.

Chemistry Department

**Innovative Chemical Sensors for the
Assessment of Some Industrial Products
and Hazardous Wastes**

Supervised by

Prof. Dr. Ayman Helmy Kamel

Professor of Analytical Chemistry, Chemistry Department

Faculty of Science, Ain Shams University

Dr.Amr Ali Mohamed

Lecturer of Inorganic Chemistry, Faculty of Science

Ain Shams University

Innovative Chemical Sensors for The Assessment of Some Industrial Products and Hazardous Wastes

By

Amiyna -A- Abd Alhafith

Supervisedby:

Approved

Prof. Dr. Ayman Helmy Kamel.....

Professor of Analytical Chemistry, Chemistry Department
Faculty of Science, Ain Shams University

Dr. Amr Ali Mohamed

Lecturer of Inorganic Chemistry, Faculty of Science
Ain Shams University

Head of Chemistry Department

Prof. Dr. Ibrahim H. Ali Badr

Acknowledgement

First of all, all gratitude is due to **ALLAH** for blessing this work, until it has reached its end, as a part of his generous help, throughout my life.

Really I can hardly find the words to express my gratitude to ***Prof. Dr. Ayman Helmy Kamel, Professor of Analytical Chemistry***, for his supervision, continuous help,

encouragement throughout this work and great effort he has done in the meticulous revision of the whole work. It is a great honor to work under his guidance and supervision.

I am also grateful to ***Dr. Amr Ali, Lecturer of Inorganic Chemistry, Faculty of Science -Ain Shams University***, for his guidance, continuous assistance and sincere supervision of this work.

Dedication

To my beloved Parents

To my Husband

To my Brothers

To my Sisters

And their Sons

List of figures.....	e
List of tables	i
Abbreviations	k
Summary	I

Chapter (I):

Introduction to Potentiometric Sensors

1.1 Significance and background	1
1.2 Principles of ISEs response	2
1.3 Origin of Potentiometric Response	4
1.3.1. Phase boundary potentials	4
1.3.2. Polymeric Phases as Inert Matrices for the Ion- Selective Membrane	10
1.4 Measuring of potentiometric selectivity coefficients	15
1.4.1. Mixed solutions method (MSM)	16
1.4.1.1. Fixed interference method (FIM).....	16
1.4.1.2. Fixed primary ion method (FPM)	16
1.4.1.3. Two- solutions method (TSM).....	17
1.4.1.4. Matched potential method (MPM)	17
1.4.2. Separate solution method (SSM)	18
1.4.2.1. Separate solution method ($a_A=a_B$) (SSM)	18
1.4.2.2. Separate solution method ($E_A=E_B$) (SSM)	19
1.5 ISEs with a solid internal contact	19
1.5.1. State of the art on solid-contact ion-selective electrodes	20
1.6 Novel sensor designs.....	21
1.7 Conclusions and outlook	26

Contents

Title	Page
Chapter (II)	
Automatic potentiometric system for quantification of three imidazole derivatives based on new polymeric PVC membrane sensors	
2.1 Introduction	36
2.2 Experimental	42
2.2.1. Equipment	42
2.2.2. Reagents	42
2.2.3. Sensor fabrication and EMF measurement	43
2.2.4. Hydrodynamic measurement setup	44
2.2.5. Analytical application	45
2.3 Results and discussion.....	46
2.3.1. Potentiometric characteristics of sensors.....	46
2.3.2. Method validation.....	54
2.3.2.1. Method linearity and detection limit	54
2.3.2.2. Method Accuracy precision and Robustness.....	56
2.3.2.3. Selectivity of the sensors	61
2.3.3. Flow injection measurements.....	66
2.3.4. Determination of imidazole in biological human fluids	67
2.4 Conclusion	72

Chapter (III)

Potentiometric System for Rapid and Selective Quantification of Piperidine Based on Novel Plastic Membrane Sensors

3.1 Introduction	78
------------------------	----

Contents

Title	Page
3.2. Experimental.....	81
3.2.1. Instrumentation	81
3.2.2. Materials and Reagents.....	82
3.2.3. Sensor preparation and EMF measurement.....	83
3.2.4. Interference study.....	85
3.2.5. Analytical applications	86
3.2.5.1. Direct potentiometric measurements of piperidine	86
3.2.5.2. Analysis of piperidine in spike wastewater samples.....	87
3.3. Result and discussion	87
3.3.1. Membrane material	87
3.3.2. Sensors characteristics	89
3.3.3. Selectivity of the sensors.....	97
3.3.4. Flow injection measurement (FIA) of piperidine	98
3.3.5. Piperidine assessment.....	102
3.2 Conclusion	105

Chapter (IV)

Response Characteristics of Lead –Selective Membrane Sensors Based on a Newly Synthesized Quinoxaline Derivatives as a Neutral Carrier Ionophores

4.1 Introduction	110
4.2 Materials and methods	113
4.2.1. Apparatus.....	113
4.2.2. Reagents and chemicals.....	114
4.2.3. Synthesis of the ionophores	115
4.2.4. Membrane preparation and potential measurements	116

Contents

Title	Page
4.2.5. Lead assessment in biological fluids	118
4.2.6. Lead quantification in alloys	118
4.3 Results and discussion.....	119
4.3.1. Elucidation of ionophores structure	119
4.3.2. Sensors characteristics.....	120
4.3.3. Response of Neutral-Carrier Membranes.....	125
4.3.4 Potentiometric selectivity	127
4.3.5. Flow injection	130
4.3.6. Analytical applications	133
4.3.6.1 Determination of Pb ²⁺ in biological fluids	133
4.3.6.2 Determination of Pb in alloy containing lead and tin	136
4.5. Conclusions	137

List of Figures

Figure No.	Title	Page
-------------------	--------------	-------------

Chapter 1

Introduction

Fig. (1.1):	Schematic representation of a typical potentiometric cell.....	2
Fig. (1.2):	Schematic representation of the basic units of chemical sensor	3
Fig. (1.3):	Common polymer matrixes used to prepare ion-selective electrode membranes	11
Fig. (1.4):	Common plasticizers used for the preparation of ISE membranes	13
Fig. (1.5):	Comparison between conventional ion-selective electrodes and solid contact ion-selective electrodes.....	20
Fig. (1.6):	Design of miniaturized potentiometric devices with integrated all-solid-state electrodes	25

Chapter (II)

Automatic potentiometric system for quantification of three imidazole derivatives based on new polymeric PVC membrane sensors

Fig. (2.1):	Structure of the proposed electroactive ionophores for imidazole membrane sensors	40
--------------------	---	----

- Fig. (2.2):** Potentiometric response of imidazole membrane sensors using 0.05 molL^{-1} MES buffer (pH 5.5) towards 49

List of Figures

Figure No.	Title Page
Fig. (2.3):	Effect of plasticizer on the potentiometric response of Imidazole membrane sensors 53
Fig. (2.4):	pH effect on the potentiometric response of imidazole membrane based sensors 59
Fig. (2.5):	Time response of imidazole membrane based sensors 61
Fig. (2.6):	Potential responses of: A) Imd/PMA based membrane sensor, B) Imd/TPB based membrane sensor, C) DB24C8 based membrane sensor towards varies cations 66
Fig. (2.7):	Typical flow injection potentiometric signals of imidazole detector based on (Imd/PM) PVC membrane 67

Chapter (III)

Batch and flow-through potentiometric system for rapid and selective quantification of piperidine based on novel plastic membrane sensors

- Fig. (3.1):** FIA manifold for estimate Piperidine. A 0.01 M carrier Trisma buffer

solution pH 7.0; loop sample 200 μ L;
and flow rate 4.0 mL/min..... 82

Fig. (3.2): Structure of the proposed electroactive
ionophores for piperidine membrane
sensors 89

List of Figures

Figure No.	Title	Page
Fig. (3.3):	Calibration plot for piperidine membrane based sensors in 0.01 M trisma buffer at pH = 7.0.....	91
Fig.(3.4):	pH effect on the potentiometric response of pipridine membrane based sensors	94
Fig.(3.5):	Time response of piperidine membrane based sensors.....	96
Fig. (3.6):	Transient potentiometric signals of piperidine using (Pip/PMA), (Pip/PT), (Pip/TPB), and β -cyclodextrine/PVC+ DOP based membrane detectors.....	101

Chapter (IV)

Response Characteristics of Lead-Selective Membrane Sensors Based on a Newly Synthesized Quinoxaline Derivatives as Neutral Carrier Ionophores

Fig. (4.1): Schematic route for the synthesis of
the ionophores 115

Fig. (4.2):	Calibration plot of sensors based on ionophores (I) and (II) in 0.01 M acetate buffer at pH=5.....	121
Fig. (4.3):	Dynamic response times based membrane sensors towards different concentration levels of Pb^{+2}	125
Fig. (4.4):	Schematic representation of a neutral-carrier polymeric lead membrane based sensor.....	127
Fig. (4.5):	Flow injection potentiometric responses obtained using ionophore (I) membrane based sensor	132

List of Tables

Table No.	Title	Page
------------------	--------------	-------------

Chapter (II)

Automatic potentiometric system for quantification of three imidazole derivatives based on new polymeric PVC membrane sensors

Table (2.1):	Comparison of some potentiometric imidazole membrane sensors.....	41
Table (2.2):	Potentiometric response characteristics of imidazole PVC membrane sensors	50
Table (2.3):	Potentiometric selectivity coefficients (Log $K^{\text{pot}}_{\text{Imd,B}}$) of Imidazole PVC membrane sensors	64
Table (2.4):	Determination of imidazole in biological samples using Imidazole membrane based sensors	69
Table (2.5):	Analysis of spiked urine samples by the proposed potentiometric and reference methods.....	71

Chapter (III)

Batch and flow-through potentiometric system for rapid and selective quantification of piperidine based on novel plastic membrane sensors

Table (3.1):	Potentiometric response characteristics of Piperidine membrane based sensors.....	92
Table (3.2):	Potentiometric selectivity coefficients (Log $K^{\text{Pot}}_{\text{Pip}^+}$) of Piperidine PVC membrane sensors	98
Table (3.3):	Response characteristics of piperidine membrane based sensors under FI operation	102
Table (3.4):	Determination of piperidine using piperidine membrane based sensors	103

Chapter (IV)

Response Characteristics of Lead-Selective Membrane Sensors Based on a Newly Synthesized Quinoxaline Derivatives as Neutral Carrier Ionophores

Table (4.1):	Potentiometric response characteristics of Pb^{+2} membrane based sensors	123
Table (4.2):	Potentiometric selectivity coefficients ($\log K_{\text{Pb}^{2+}, j}$) of Lead membrane sensors	130
Table (4.3):	Response characteristic of ionophore (I) membrane based sensor under FI operation.....	133
