Mechanical Circulatory Support

**Essay Submitted for Partial Fulfillment
of Master Degree in Anesthesiology**

BY

Yasser Ahmed Aly Ibrahim

M.B.B.Ch., Faculty of Medicine, Ain Shams University

Supervised By

Prof. Dr. Salwa Mehanny Abd El-Malk

*Professor of Anesthesia and Intensive Care
Faculty of Medicine - Ain Shams University*

Dr. Ahamed Abd El-Aala El-Shawarby

*Assistant Professor of Anesthesia and Intensive Care
Faculty of Medicine - Ain Shams University*

Dr. Abeer Mohamed Abd El-Aziz El-Dick

*Lecturer of Anesthesia and Intensive Care
Faculty of Medicine - Ain Shams University*

**Faculty of Medicine
Ain Shams University**

Acknowledgment

All thanks are all due to **God**.

I would like to express my deepest thanks to **Prof. Dr. Salwa Mehanny Abd El-Malk**, Professor of Anesthesia and Intensive Care, Faculty of Medicine, Ain Shams University, for her kind supervision, valuable remarks and encouragement.

I stand in great debt to **Dr. Ahmad Abd El-Aala El-Shawarby**, Assistant Professor of Anesthesia and Intensive Care, Faculty of Medicine, Ain Shams University, for his generous help and meticulous care throughout the whole study.

I wish to express my deepest appreciation to **Dr. Abeer Mohamed Abd El-Aziz El-Dick**, Lecturer of Anesthesia and Intensive Care, Faculty of Medicine, Ain Shams University, for her kind cooperation and valuable advice.

Yasser

List of Tables

No.	Table	Page
Table (1):	Factors affecting contractility.	24
Table (2):	Classification of cardiomyopathies on morphologic and hemodynamic basis.	45
Table (3):	Usual hemodynamic effects of intra-aortic balloon pumping.	68
Table (4):	Indications for intra-aortic balloon pumping.	73
Table (5):	Contraindications to intra-aortic balloon pumping.	79
Table (6):	Complications for intra-aortic balloon pumping.	80
Table (7):	Criteria for the implantation of ventricular assist device in early post-cardiotomy patients.	100
Table (8):	Criteria for the implantation of ventricular assist device patients developing later post-cardiotomy cardiogenic shock.	101
Table (9):	Choices of device by application.	104
Table (10):	Main indications of different devices.	105
Table (11):	Anticoagulation for VAD.	111
Table (12):	Definition of mechanical circulatory complications.	113
Table (13):	Results of VAD in patients whose indication is post-cardiotomy cardiogenic shock.	118
Table (14):	Results of VAD in patients whose indication is bridge to transplantation.	119
Table (15):	Results of VAD in patients in whom insertion was for an indication other than post-cardiotomy cardiogenic shock and bridge to transplantation.	119
Table (16):	A comparison of anticipated clinical problems with permanent LVAD vs. heart transplantation.	126

List of Figures

No.	Figure	Page
Figure (1):	The coronary arteries and veins that drain into the coronary sinus.	12
Figure (2):	Diagram illustrating the principal arteries and vein.	15
Figure (3):	Events of the cardiac cycle.	17
Figure (4):	An idealized pressure-volume loop with corresponding events of the cardiac cycle.	18
Figure (5):	The Frank-Starling diagram of both the right and left ventricles is demonstrated.	27
Figure (6):	The figure demonstrates a patient at point 1 on a hypofunctioning Starling curve.	29
Figure (7):	Diastolic pressure-volume diagram.	32
Figure (8):	Intra-aortic balloon pump catheter demonstrating balloon and arterial lumen.	58
Figure (9):	Pump console.	60
Figure (10):	Proper IABP timing.	62
Figure (11):	Incorrect IABP timing.	63
Figure (12):	Typical double roller pump head.	84
Figure (13):	Centrifugal pump head.	86
Figure (14):	The Abiomed pump with the inflow and outflow cannulae, prosthetic ventricles, and console shown.	88
Figure (15):	TCI assist device.	93
Figure (16):	The vented-electric TCI device.	93

No.	Figure	Page
Figure (17):	The biventricular Berlin heart system.	95
Figure (18):	The Hemopump is inserted via the femoral artery. The inflow sits in the LV. The outflow sits in the proximal descending aorta.	97
Figure (19):	Relative complication rates (percentage) in the bridge and postcardiotomy groups.	117
Figure (20):	LionHeart totally implantable LVAD.	121
Figure (21):	DEBakey / NASA axial flow LVAD compared to electromechanical pulsatile LVAD.	122
Figure (22):	The Jarvik-7 artificial heart is the most widely used device.	128
Figure (23):	The Hemopump.	133
