بِسْمِ اللَّهِ الرَّحْمَنِ الرَّحِيمِ

قَالَ

لَسْبَحَانَكَ لَا عِلْمَ لَنَا  
إِلَّا مَا عَلَّمْتَنَا إِنَّكَ أَنْتَ  
الْعَلِيمُ الْعَظِيمُ

صدق الله العظيم

سورة البقرة الآية: ٣٢

# Acknowledgment

*First, I am forever grateful to **Allah**, who always helps and cares me, and for giving me the ability and strength to fulfill this work,*

*I wish to express my deepest gratitude and thanks to **Dr. Rabab Mahmoud Hassan** Assistant Professor of Nursing Administration, Faculty of Nursing, Ain- Shams University for her continues encouragement, support, guidance, and valuable advice toward the achievement of this study.*

*I am particularly indebted to **Dr. Hemat Abdel Azeem Mostafa**, Assistant Professor of Nursing Administration, Faculty of nursing, Ain -Shams University for her continuous assistance, constant encouragement and advice and for the time and effort she gives me throughout this work,*

*Last but not least I would like also to express my deep gratitude and appreciation to all those who directly or indirectly helped me in this study .*

*I wish to convey my thanks to all staff nurses who participate in the study for their cooperation to complete this work,*

*✍. **Nashwa Salah EL Dien***

# *Dedication*

*I would like to dedicate this thesis to*

*My son*

*My daughters*

*My brothers and my sister*

*For their love, care, support and  
encouragement that allowed me to accomplish  
this work,*

*Nashwa Salah EL Dien*

## **Motivation and Quality of Work Life among Staff Nurses**

### **Abstract**

**Background:** In the present era of competition and globalization there is a need to pay attention towards the employee's motivation in order to achieve growth and success and developing of work environment where employees enjoy their work and give their best. **Aim:** Investigate the motivation and quality of work life among staff nurses. **Research design:** a descriptive correlational study design was used. **Subjects:** 240 staff nurses out from 471 working at Nasser institute hospital for research and treatment. **Tools:** Two tools were used Motivation scale and Quality of work life questionnaire. **Results:** Majority of the staff nurses (98.5%) had low motivation level .The highest mean for motivation was hospital policy domain while achievement domain had the lowest mean. Also more than of two thirds of the studied staff nurses (67.5%) had low of total perception regarding quality of work life. The highest mean for quality of work life was work frame domain while scope of work was the lowest. **Conclusion:** There is highly statistically significant positive correlation between motivation and quality of work life among staff nurses. **Recommendations:** Quality of work life should be assessed periodically, promote fair incentives system hospitals have to staff nurses.

## **Introduction**

In the fierce era of competition, organizations nowadays are more emphasizing on the management of Human Resources. A manager capable of managing his employees effectively is a successful one. Motivational tools are the most effective in this context. Employees are not motivated solely by money and employee behavior is linked to their attitudes (*Nabi, 2017*).

Motivation is one of the most important factors that affect human behavior and performance. The term motivation as something that energizes individuals to take action and which is concerned with the choices the individual makes as part of his or her goal-oriented behavior. Motivation is defined as the willingness to exert high levels of effort, toward organizational goals, conditioned by the effort's ability to satisfy some individual need (*Saraswathi, 2011*).

Motivation is values-based, psycho-biologically stimulus-driven inner urge that activates and guides human behavior in response to self, other, and environment, supporting intrinsic satisfaction and leading to the

intentional fulfillment of basic human drives, perceived needs, and desired goals (*Ander'lland, 2013*).

Motivation is the act of stimulating someone or oneself to get a desired course of action or to push the right bottom to get a desired reaction. It is a process of inducing, inspiring and energizing people to work willingly with zeal, initiative, confidence, satisfaction and an integrated manner to achieve desired goals. It is a moral boosting activity (*Moody & Pesut, 2010*).

Work motivation determines nurses' behavior and performance when providing high-quality nursing practice (*Sipho et al., 2014*). In fact, hospital nurses comprise the largest employment group in the health workforce; a group on which the quality of delivered health cares is very much dependent on. Therefore it needs to be given more attention than has been paid to date, and also be better managed (*McPake et al., 2013*).

Quality of Work Life (QWL) is a set of principles which holds that people are the most important resource in the organization as they are trustworthy, responsible and capable of making valuable contribution and they should be treated with dignity and respect. QWL entails the design of work systems that enhance the working life experiences of
