**The Effectiveness of manual and ProTaper Universal
Rotary Retreatment System for Gutta-Percha
Removal with or without a Solvent
(An in vitro study)**

Thesis

*Submitted to the Faculty of Oral and Dental Medicine, Cairo
University.*

In Partial Fulfillment

*Of the requirements of master Degree in
Endodontics*

By

Ahmed Mohamed Ali Reda Bashnakly

(6 October University)

2006

Faculty of Oral and Dental Medicine

Cairo University

2011

SUPERVISORS

Prof. Dr. Medhat Abd El Rahman Kataia

Professor of Endodontics

Faculty of Oral and Dental Medicine

Cairo University

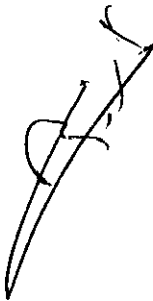

Dr. Karim Galal Abd El Kader

Lecturer of Endodontics

Faculty of Oral and Dental Medicine

Cairo University

Acknowledgement

To Allah, the Most Gracious, the Most Merciful for showing me the right path and giving me the strength to carry on working in times of difficulties and obstacles.

***Prof. Dr. Medhat Abd El-Rahaman Kataia**, Professor of Endodontics, Faculty of Oral and Dental Medicine, Cairo University, gave me the confidence and support to complete my Master's thesis issue. You challenged me to look for solutions. I have learned to believe in my future, my work and myself.*

*I wish to express my sincere graduate and special thanks to **Dr. Karim Galal**, Lecturer in the Department of Endodontics, Faculty of Oral and Dental Medicine, Cairo University, his moral support and continuous guidance in enabled me to begin and complete my work successfully and he gave me a generous help throughout my study.*

*I wish to thanks **Prof. Dr. Khaled Ezzat**, Professor and Chairman of Endodontic Department, Faculty of Oral and Dental Medicine, Cairo University, for his kindness and support. Finally, Endless thanks are extended to all my professors, colleagues and stuff members of the Endodontic Department for their support and concern:*

Dedication

This thesis is dedicated to my father, who taught me that the best kind of knowledge to have is that which is learned for its own sake and always encouraging and pushing me in the way of success.

It is also dedicated to my lovely mother with her endless love and sacrifices and learned me to believe in my future, my work and myself.

My daughter and my wife who are partners in all my thesis work have been a great source of motivation and inspiration, have patiently allowed me to study at the expense of household chores, holidays and countless other little things, all of which only love endure.

My appreciation is also to my brothers and sister, who offered me unconditional love and support throughout the course of this thesis.

To my friends and colleagues who together have made my time in college enjoyable and rewarding.

LIST OF CONTENTS

Title	Page
List of contents.....	I
List of tables.....	III
List of figures.....	V
Introduction.....	1
Review of Literature	3
❖ Methods of retreatment.....	3
❖ Root canal fillings.....	23
❖ Methods of evaluations.....	33
Aim of Study.....	38
Material and Methods.....	39
❖ Specimen selection.....	39
❖ Specimen preparation.....	39
❖ Root canal preparation.....	40
❖ Grouping of specimen.....	41
❖ Root canal obturation.....	43
❖ Retreatment techniques.....	44
❖ Evaluation of samples.....	48
❖ Statistical analysis.....	51
Results.....	52
❖ Stereomicroscopic evaluation.....	52
❖ Scanning Electron microscopic evaluation.....	66
❖ Retreatment time.....	80
Discussion.....	84

Summary and Conclusion.....	91
Bibliography.....	96
Arabic Summary.....

List of Tables

Table	Title	Page
I	The means, standard deviation (SD) values and results of Mann-Whitney U test for comparison between filling types with each file type with and without solvent.....	52
II	The means, standard deviation (SD) values and results of Mann-Whitney U test for comparison between file types with each filling type with and without solvent.....	55
III	The means, standard deviation (SD) values and results of Mann-Whitney U test for comparison between solvents with each filling type and each file type.....	58
IV	The means, standard deviation (SD) values and results of Friedman's test for comparison between the three segments.....	60
V	The means, standard deviation (SD) values and results of Mann-Whitney U test for comparison between filling types with each file type with and without solvent.....	66
VI	The means, standard deviation (SD) values and results of Mann-Whitney U test for comparison between file types with each filling type with and without solvent....	68
VII	The means, standard deviation (SD) values and results of Mann-Whitney U test for comparison between solvents with each filling type and each file type.....	70

VIII	The means, standard deviation (SD) values and results of Friedman's test for comparison between the three segments.....	73
IX	Results of regression analysis for the effect of filling type, file type, Chloroform and their interactions on mean retreatment time.....	78
X	The means, standard deviation (SD) values and results of comparison between filling types regardless of the other variables.....	79
XI	The means, standard deviation (SD) values and results of comparison between file types regardless of the other variables.....	80
XII	The means, standard deviation (SD) values and results of comparison between time with and without solvent regardless of the other variables.....	81
XIII	The means, standard deviation (SD) values and results of comparison between retreatment time of the different variables' interactions.....	82

List of Figures

Figure	Title	Page
1	Electronic endodontic motor (X-SMART; Dentsply, United Kingdom).....	41
2	ProTaper Universal rotary files (<i>Dentsply/Maillefer</i>)....	41
3	ProTaper Universal Gutta-Percha size F4 (<i>Dentsply Maillefer, Ballaigues, Switzerland</i>).....	42
4	0.04 Great taper gutta-perch (<i>roeko, coltene\whaleddent, Germany</i>).....	42
5	AH Plus sealer (De Trey Dentsply, Konstanz, Germany).....	43
6	ProTaper Universal retreatment instruments (<i>Dentsply/Maillefer</i>).....	46
7	Gutta-percha solvent (Chloroform).....	46
8	Flowchart illustrating the classification of samples according to the obturation and retreatment techniques...	47
9	Showing the Stereomicrograph of longitudinal splitted root as a first step of evaluation of cleanliness of the canal walls.	49
10	Showing Stereomicrograph of the total canal area was outlined and the area was calculated by software.....	49
11	Showing Stereomicrograph of the remnants of the filling materials were outlined and the areas was calculated by software.....	49

12	Bar chart representing mean remnant % with the two filling types.....	53
13	Bar chart representing mean remnant % with the two file types.....	56
14	Bar chart representing mean remnant % with and without solvent.....	59
15	Bar chart representing mean remnant % in the three segments.....	61
16	(A1) Stereomicrographs of split specimens that were obturated using single cone technique. (A2) Stereomicrographs of split specimens that were obturated using lateral condensation technique. Both Stereomicrographs samples were retreated with Hedström files.....	62
17	(B1) Stereomicrographs of split specimens that were obturated using single cone technique. (B2) Stereomicrographs of split specimens that were obturated using lateral condensation technique. Both Stereomicrographs samples were retreated with Hedström files and Chl.....	63
18	(C1) Stereomicrographs of split specimens that were obturated using single cone technique. (C2) Stereomicrographs of split specimens that were obturated using lateral condensation technique. Both Stereomicrographs samples were retreated with ProTaper retreatment rotary system.....	64
19	(D1) Stereomicrographs of split specimens that were obturated using single cone technique. (D2) Stereomicrographs of split specimens that were obturated using lateral condensation technique. Both Stereomicrographs samples were retreated with ProTaper retreatment rotary system with Chl.....	65
