Atomic Energy Authority, Cairo, Egypt

بِسْمِ اللَّهِ الرَّحْمَنِ الرَّحِيمِ

وَيَسْأَلُونَكَ عَنِ الرُّوحِ قُلِ الرُّوحُ مِنْ أَمْرِ رَبِّي
وَمَا أُوتِيتُمْ مِنَ الْعِلْمِ إِلَّا قَلِيلًا

[الإسراء : 85]

Dedicated

To

My parents (Father and Mother),

My brothers,

My cognates

And

My friends

Abstract

Acknowledgment

*I kneel obsequiousness to **ALLAH** thanking **HIM** for showing me the right way, without **HIS** help my efforts would have gone astray. Thanks also for a person I love him very much, the **Prophet Mohammed {God's praise and peace upon}**, who demonstrate the way on the strength of his instructions.*

*I would like to extend a special thanks to, **Prof. Dr. Ahmad Morsy Ahmad**, Department of Physics, Faculty of Girls, Ain Shams University, for his many suggestions and his continuous advises during this research.*

*Thanks are also to **Assist. Prof. Dr. Tarek Mohamed El-Desoky**, Department of Physics, Faculty of Girls, Ain Shams University, for his many illuminating discussions through the course of the work*

*I wish to express my deepest sincerest gratitude to **Dr. Mohammed Fawzi Zaki**, Department of Experimental Nuclear Physics, Nuclear Research Center, Atomic Energy Authority for his patience, endless help, and support during this research and his guidance through the early years of chaos and confusion.*

*Great thanks for **Prof. Dr. Amira Zaki**, head of Physics Department for her help and continuous encouragement for me and all young scientists in our department.*

Of course, I am grateful to my parents for their patience. Without them this work would never have come into existence.

Finally, I wish to thank the following: Department of Experimental Nuclear Physics, Nuclear Research Center, Atomic Energy Authority, staff members of the Physics Department, Faculty of Girls, Ain Shams University; specially, my friends (for all the good and bad times we had together); and my brothers; my family .

2.9.7.2 Film badge.....	30
2.9.8 Nuclear emulsions	31
2.10 Solid State Nuclear Track Detectors	32
2.10.1 History of Solid State Nuclear Track Detectors	32
2.10.2 Basics	34
2.10.3 CR-39 characteristic	37
2.10.4 Stopping power, restricted energy loss	41
2.11 Track Etching: Methodology and Geometry	44
2.11.1 Track etching process	44
2.11.2 Geometry of track development	46
2.11.2.1 Geometry of track development and basic terms.....	46
2.11.2.2 Geometry of track development for constant V_t	48
2.11.2.2.1 Constant V_t and normal incidence.....	48
2.11.2.2.2 Constant V_t and oblique incidence.....	50
2.12 Bulk etch rate and track etch rate	53
2.12.1 Bulk etch rate V_b	53
2.12.1.1 Indirect determination of V_b	54
2.12.1.2 Determination of V_b from the diameter of tracks of fission fragments.....	54
2.12.1.3 Determination of V_b from the change in detector mass.....	55
2.12.1.4 Determination of V_b from the change in detector thickness....	55
2.12.1.5 Determination of V_b from spectroscopy methods.....	56
2.12.1.6 Determination of V_b from the color of the LR detector.....	57
2.12.1.7 Determination of V_b from the critical angle.....	57
2.12.2 Track etch rate (V_t function)	57
2.13 Previous works	58

Chapter (III)

3. Experimental procedures.....	75
3.1 Equipment and materials.....	75
3.1.1 Plastic detector material (CR-39).....	75
3.1.2 Chemical etching solution.....	75
3.1.3 Track counting system.....	76
3.1.4 Sensitive digital micrometer and electronic balance.....	76
3.2 Determination the response of CR-39 to fast neutrons.....	76
3.2.1 Sample preparation.....	76
3.2.2 Californium-252 neutron source description.....	77
3.2.3 Chemical etching process and reading.....	79
3.2.4 The current used method for V_b measurement.....	80
3.3 A new method to investigate the unknown dose of fast neutrons using the UV-VIS spectra of CR-39	81
3.3.1 Sample preparation.....	83
3.4 Response study of CR-39 with different configurations.....	84
3.4.1 Sample preparation.....	84
3.4.2 Neutron irradiation.....	85
3.4.3 Processing and reading.....	85
3.4.4 Measurement Evaluation.....	87
3.5 The effect of radiator thickness on CR-39 detection efficiency	88
3.5.1 Sample preparation.....	88
3.5.2 Processing and reading.....	88
3.6 Another novel approach for counting recoil tracks for neutron dosimeter application.....	89
3.6.1 Sample preparation.....	93

Chapter (IV)

4. Results and Discussion.....	95
4.1 The effect of the etching time.....	95
4.2 The effect of neutron irradiation time.....	97
4.3 The effect of neutron doses (neutron fluence).....	99
4.4 Interpretation of the results of the UV-visible spectroscopy.....	100
4.4.1 Dependence of energy band gap on optical absorbance.....	101
4.5 The effect of neutron equivalent dose on absorbance.....	105
4.6 Effect of different radiator on the response of CR-39.....	106
4.7 The effect of radiator thickness on CR-39 registration of fast neutron.....	109

4.8 Counting recoil proton using coincidence tracks for neutron dosimeter application.....	111
---	------------

Chapter (V)

Conclusions.....	114

Arabic Summary	

List of Tables

List of Tables

<i>Table</i>	<i>Captions</i>	<i>page</i>
2.1	Radiological Units.	19
2.2	Replaced Units by Radiation Communities.	20
2.3	Values for Radiation. Weighting factors Recommended in ICRP Puublication 60 [26].	21
2.4	Tissue Weighting Factors for Individual Tissues and Organs.	22
2.5	History of Nuclear Track Detection [33].	32
2.6	The following table summarizes the main properties of CR-39 sheets compared to the most popular transparent materials [37].	39
2.7	Etchants for some SSNTDs [19].	46
4.1	Response of the CR-39 dosimeter irradiated with ^{252}Cf neutron source (average energy of 2.3 MeV) etched in 6.25 N NaOH at 70 °C for 10 h etching time.	100
4.2	The variation of band gap energy and Urbach's energy in neutron irradiated CR-39, along with the number of carbon atoms (N) per conjugated length.	103
4.3	Dosimeter response to ^{241}Am -Be.	107
4.4	Response and background values for all the three methods of measurement.	113

List of Figures

List of Figures

<i>Figure</i>	<i>Captions</i>	<i>Page</i>
1.1	Absorbed dose in tissue irradiation by neutrons.	2
2.1	The structure of neutron.	10
2.2	Feynman diagram.	10
2.3	Dose-effect curves. Curve (a) represents the deterministic effect and curve (b) represents stochastic effect.	19
2.4	Dose-density curve.	31
2.5	The atomic character of particle tracks in (a) crystal and (b) polymer.	35
2.6	Geometry of the track development. The incident angle is normal with respect to the detector surface, and V_t is constant.	47
2.7	Three phases in the track development.	50
2.8	Phases of track development for oblique incidence.	52
3.1	Spectrum of fast neutrons emitted directly from californium-252 neutron source.	77
3.2	Vertical cross section of movable ^{252}Cf irradiation cell.	79
3.3	Horizontal cross section of movable ^{252}Cf irradiation cell.	79
3.4	A schematic diagram showing the experimental determination of bulk and track etch rates.	81
3.5	UV-VIS 8500 double beam spectrophotometer.	84
3.6	Schematic configuration of the three dosimeters.	85

3.7	Schematic diagram showing the experimental arrangement and CR-39 irradiation.	88
3.8	Different types of coincident events.	90
3.9	Two detector foils in contact, showing marked recoil nuclei tracks. After etching tracks were counted on the surfaces denoted by A' and B'. The detector layer removed by chemical etching is denoted by h.	92
3.10	Schematic showing the measurement of density of coincidence track through pair of CR-39.	94
4.1	The variation of track density as a function of etching time for neutron-irradiated CR-39 detector at different irradiation time.	95
4.2	Photomicrograph of recoil tracks in CR-39 plastic detector irradiated with ^{252}Cf neutron source for 24 h, etched in 6.25 N NaOH for etching time 2, 4, 6, 8 and 10 h.	96
4.3	The dependence of the track density on the irradiation time.	97
4.4	Photomicrograph of recoil tracks in CR-39 plastic detector irradiated with ^{252}Cf neutron source for 24, 48, 72, 96 and 120 h, etched in 6.25 N NaOH for etching time 4h.	98
4.5	The variation of track density as a function of neutron dose (neutron fluence) for CR-39 samples etched at 10h. The straight line is linear fit to the data points is given by $Y = a + b X$ where $a = 5845.4 \pm 602.5$ and $b = 1.21 \times 10^{-4} \pm 5.61 \times 10^{-6}$.	99
4.6	UV-visible spectra of neutron-irradiated CR-39.	103
4.7	Representation of Tauc's relation to derive the indirect optical gap E_g from UV-VIS spectrum data for neutron irradiated CR-39.	104
