

Impact of gamma rays and certain natural products on the virulence of some metallo-β-lactamase producing gram-negative pathogenic bacteria

Thesis Submitted for the Ph.D degree in Microbiology

By Hanady Mohammed AL-Ghareeb Mohammed Nada

B. SC. in Microbilology & Chemistry, Ain-Shams University (1999)

M.Sc. in Microbiology, Zagazig University (2008)

Supervisors

Prof. Dr. Fawkia Mohammed Elbeih

Professor of Microbiology Microbiology Department, Faculty of Science, Ain Shams University

Dr. Khaled Zakaria El-Baghdady

Associate Prof. of Microbiology Microbiology Department, Faculty of Science, Ain Shams University

Prof. Dr. Hala Abd-Allah Farrag.

Professor of Medical Microbiology Microbiology Department, National Center for Radiation Research and Technology (NCRRT), Atomic Energy Authority

Dr. Einas Hamed El-Shatoury

Associate Prof. of Microbiology Microbiology Department, Faculty of Science, Ain Shams University

Microbiology Department, Faculty of Science, Ain Shams University.

DEDICATION

I would like to dedicate this work to soul of my lovely father, to my mother for their encouragement, to my husband for putting up with me and supporting me all through this work, to my children wishing them a life overwhelmed with success. Many thanks to all of them.

Hanady Nada

ACKNOWLEDGEMENT

I am deeply thankful to ALLAH for showing me the right path and helping me to complete this work.

My appreciation to Prof. Dr. Fawkia Mohammed Elbeih, Professor of Microbiology, Microbiology Department, Faculty of Science, Ain Shams University for her kind supervision

My sincere thanks with deep gratitude to Prof. Dr. Hala Abd-Allah Farrag. Professor of Medical Microbiology, Microbiology Department, National Center for Radiation Research and Technology (NCRRT), Atomic Energy Authority for devoting much of her valuable time in the supervision during all stages of this work, objective criticism which was a great asset to this dissertation, her constructive ideas to solve the problems.

I would like to express my profound appreciation and special thanks to Dr. Khaled Zakaria El-Baghdady and Dr. Einas Hamed El-Shatoury. Associate Proffessor of Microbiology, Microbiology Department, Faculty of Science, Ain Shams University. For their support, encouragement, continuous guidance, valuable remarks, constructive criticism and support to pursue this thesis.

I am deeply thankful to Dr. Asrrar Mohammed Murad Associate Proffessor of Physiology at National Center for Radiation Research and Technology (NCRRT), Atomic Energy Authority for her supervision during in vivo study on experimental animals

I am also taking this opportunity to thank Dr. Sahar Tolba Associate Prof. of Microbiology, Microbiology Department, Faculty of Science, Ain Shams University. For her kind help in performing the genotypic detection of metallo-β-lactamase genes.

Hanady Nada

Table No.	Title	Page No.
(1)	Classes of used antibiotics, their biological source, spectrum of effect and their mode of action.	14
(2)	Classes of β-lactams and their antimicrobial spectrum	25
(3)	Classification of β -lactamase enzymes	30
(4)	The most common MBL-bla _{genes} (Walsh, 2010)	35
(5)	Susceptibility break points of different group of antibiotics with their mode of action.	72
(6)	The oligonucleotide sequence of specific primers used in this study	80
(7)	Isolation of 107 gram-negative bacilli from different samples and specimens out of 98 patients with their gender and age	93
(8)	Susceptibility of 107 isolates of gramnegative bacilli to different antibiotics	95

(9)	Phenotypic detection of metallo-β-lactamase by combined disk test (CDT) and double disk synergy test (DDST)	107
(10)	Results of combined disk test (CDT) for 107 isolates of gram-negative bacilli resistant to ceftazidime (CAZ) with two inhibition zones \geq 5 mm and \geq 7 mm	112
(11)	Results of double disk synergy test (DDST) for 107 isolates of gram-negative bacilli resistant to ceftazidime (CAZ).	112
(12)	Genotypic detection of MBL- bla_{genes} present in fourteen MBL-producing strains with their source of isolation	117
(13)	Antibiotic susceptibility test of MBL-producer before and after exposure to 24.4 Gy of gamma radiation	123
(14)	Minimum inhibitory concentrations (MICs) of ceftazidime (CAZ) and imipenem (IPM) against the MBL-producers before and after gamma irradiation.	126
(15)	Effect of gamma irradiation on the production of MBL in fourteen MBL-producers by combined disk test and double disk synergy test	127
	double disk synergy test	12

(16)	Increased inhibition zone diameters (mm) around ceftazidime (CAZ) plus plant extracts disks compared with CAZ disk only	130
(17)	Increased inhibition zone diameters (mm) around imipenem (IPM) plus plant extracts disks compared with IPM disk only	131
(18)	Effect of different treatment on the white blood cell count (WBCs) and number of dead rats	134
(19)	Effect of different treatment on white blood cells (WBCs) count and differential analysis at the end of treatments	138
