## قسم

نقسم بالله العظيم أن المادة التي تم توثيقها وتسجيلها  
علي هذه الأفلام قد أعدت دون أية تغيرات

## يجب أن

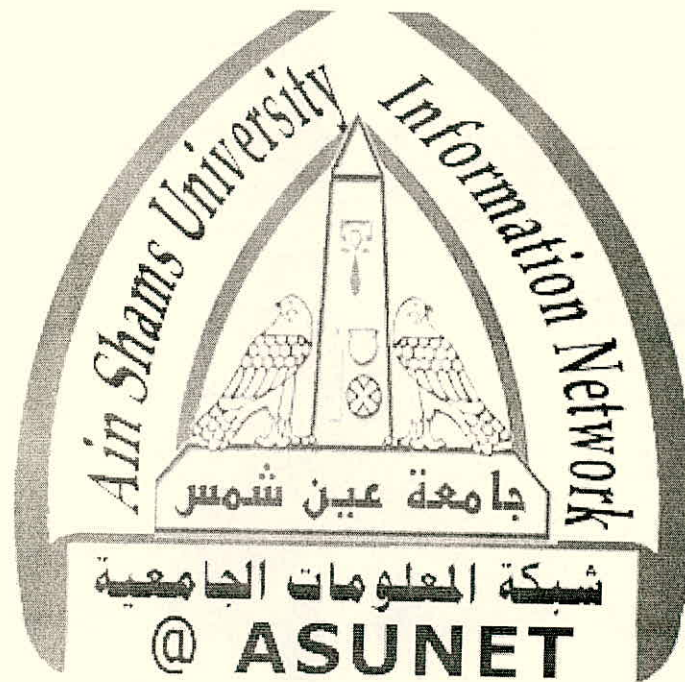

تحفظ هذه الأفلام بعيداً عن الغبار

في درجة حرارة من 15 – 20 مئوية ورطوبة نسبية من 20-40 %

To be kept away from dust in dry cool place of  
15 – 25c and relative humidity 20-40 %

**CHEMICAL STUDIES ON THE TREATMENT OF  
HAZARDOUS LIQUID WASTES BY  
TWO-PHASE TRANSFER**

**A Thesis  
Submitted by**

**MONA SOLIMAN GASSER  
(M.Sc.Chemistry)**

**For  
The degree of Doctor of Philosophy  
(Chemistry)**

**To  
Chemistry Department  
Faculty of Science  
Ain Shams University**

**Thesis Advisors**

**Prof. Dr. S. S. Abd El Rehim**

Prof. of Electro and Physical  
Chemistry, Faculty of Science,  
Ain Shams University.

**Prof. Dr. H. F. Aly**

Prof. of Nuclear Chemistry  
and Chairman of Atomic  
Energy Authority.

**Dr. J. A. Daoud**

Assistant Prof. of Radiochemistry,  
Hot Laboratories Centre,  
Atomic Energy Authority.

**Dr. S. A. El-Reefy**

Assistant Prof. of Radiochemistry  
Head of Analytical Chemistry  
Department, Hot Laboratories  
Centre, Atomic Energy Authority

**1997**

## 1. INTRODUCTION

|                                                           |    |
|-----------------------------------------------------------|----|
| <i>1.1 Basic Concepts of Liquid Membrane</i>              | 1  |
| 1.1.1. Solvent polymeric membranes (SPM)                  | 1  |
| 1.1.2. Bulk liquid membrane                               | 2  |
| 1.1.3. Supported liquid membranes (SLM)                   | 2  |
| 1.1.4. Liquid emulsion membranes (LEM)                    | 2  |
| 1.1.5. Mechanism of separation                            | 5  |
| <i>1.2. Reagent Selection Procedure</i>                   | 8  |
| 1.2.1. Chemical properties of heavy metals                | 9  |
| 1.2.2. Selection of extractants                           | 10 |
| 1.2.2.1 Cyanex-301                                        | 11 |
| 1.2.2.2. Cyanex-302                                       | 11 |
| <i>1.3. Literature Survey</i>                             | 12 |
| 1.3.1. Extraction of metal ions by commercial extractants | 12 |
| 1.3.2. Supported liquid membranes (SLM)                   | 21 |
| 1.3.2.1. Hollow fibers modules                            | 21 |
| 1.3.2.2. Flat sheet supported liquid membrane             | 23 |
| 1.3.3. Liquid emulsion membrane LEM                       | 29 |

## 2. EXPERIMENTAL

|                                    |    |
|------------------------------------|----|
| <i>2.1. Chemicals and Reagents</i> | 41 |
| <i>2.2. Instrumentation</i>        | 41 |
| 2.2.1. General                     | 41 |
| 2.2.2. Hollow fiber modules        | 44 |
| 2.2.3. Flat sheet SLM cell         | 46 |

|                                                                     |    |
|---------------------------------------------------------------------|----|
| <b>2.3. Preparation of LEM</b>                                      | 46 |
| <b>2.4. Extraction Techniques</b>                                   | 48 |
| 2.4.1. Liquid liquid extraction                                     | 48 |
| 2.4.2. Membrane permeation                                          | 49 |
| 2.4.2.1. Hollow fibre membrane permeation                           | 49 |
| 2.4.2.2. Flat sheet SLM permeation                                  | 49 |
| 2.4.2.3. Permeation and break up of LEM                             | 50 |
| <b>2.5. Spectrophotometric Determination of Uranium</b>             | 51 |
| <b>2.6. Spectrometric Determination of Zn(II),Cd(II) and Cu(II)</b> | 51 |
| 2.6.1. Atomic absorption                                            | 51 |
| 2.6.2. Experimental procedure                                       | 54 |

### **3.Results and Discussion**

|                                                                         |    |
|-------------------------------------------------------------------------|----|
| <b>3.1. Cd(II),Cu(II),Zn(II) and U(VI) / Cyanex-302 system</b>          | 61 |
| 3.1.1. Equilibrium investigations                                       | 61 |
| 3.1.2. Permeation of Cd(II) through supported liquid membranes (SLM)    | 62 |
| 3.1.2.1. Hollow fiber modules                                           | 62 |
| 3.1.2.1.1. Effect of phosphate concentration                            | 65 |
| 3.1.2.1.2. Effect of feed volume to stripping solution volume ratio     | 65 |
| 3.1.2.1.3. Effect of HCl concentration                                  | 65 |
| 3.1.2.2. Flat sheet membrane                                            | 69 |
| 3.1.2.2.1. Individual transfer of Cd(II)                                | 70 |
| 3.1.2.2.1.1. Effect of stirring speed                                   | 70 |
| 3.1.2.2.1.2. Effect of HCl concentration                                | 70 |
| 3.1.2.2.1.3. Effect of phosphate concentration                          | 73 |
| 3.1.2.2.2. Transfer of Cd(II) in presence of Cu(II) and Zn(II)          | 73 |
| 3.1.2.2.3. Transfer of Cu(II) in presence of Cd(II) and Zn(II)          | 78 |
| 3.1.2.2.4. Selectivity of the SLM system                                | 82 |
| <b>3.1.3. Permeation of Cd(II) through LEM containing Cyanex-302</b>    | 84 |
| 3.1.3.1. Equilibrium investigations                                     | 84 |
| 3.1.3.2. LEM stability                                                  | 90 |
| 3.1.3.3. Individual permeation of Cd(II) through LEM                    | 92 |
| 3.1.3.3.1. Factors affecting the cadmium permeation                     | 92 |
| 3.1.3.3.1.1. Effect of stirring speed                                   | 92 |
| 3.1.3.3.1.2. Effect of the ratio of feed phase to membrane phase volume | 94 |
| 3.1.3.3.1.3. Effect of phosphate concentration in the outer phase       | 94 |
