Acknowledgment

I here thank Allah almighty for all his blessings and I hope that the effort exerted in this work is for his sake.

I would like to express my profound gratitude and appreciation to Prof. Dr. MOHAMED FATHY ELSHAHAT Professor of Inorganic and Analytical Chemistry, Faculty of Science, Ain Shams University, who offered his precious time, support, encouragement, facilities, kind instructions and reassurance advice for supervising this work. I ask my god to blessing him.

Best gratitude to Dr. ATTIA EL-SAYED ATTIA Assistant Prof. of inorganic chemistry, Faculty of Science, Ain Shams University, for his devoted efforts and continuous guidance.

Special thanks are more than due to Dr. SAMY M. Abdel-Azeem Lecturer of Analytical chemistry, Faculty of Science, Fayoum University, who contributed essential effort and experience for the completion of this work.

I would like to express my deepest gratitude for my parents for their continuous support and dedicate my success to them.

Thanks!

CHAPTER(4)

Aim of the Work

4. RESULTS AND DISCUSSIONS

4.1 (Part I)

Off-Line Preconcentration	78
(A) SPE Sorbents	78
(B) The Sorbent Quality	79
(C) Off - line Separation and Preconcentration Procedure	81
(D) Analyte Preconcentration	82
(E) Separation and Preconcentration Using Batch Procedure	83

4.1.1.Part I, Section (A)

Preconcentration and determination of caffeine in plasma sample using untreated polyurethane foam	85
--	----

4.1.1.1. Optimization of the Off-Line preconcentration procedure	85
<i>4.1.1.1.1. Effect of pH on the extraction of caffeine</i>	85
<i>4.1.1.1.2. Flow rate effect</i>	85
<i>4.1.1.1.3. Breakthrough capacity</i>	86
<i>4.1.1.1.4. Extraction mechanism</i>	86
<i>4.1.1.1.5. Sorption kinetics</i>	87
<i>4.1.1.1.6. Preconcentration</i>	89
<i>4.1.1.1.7. Adsorption isotherm</i>	90
<i>4.1.1.1.8. Optimization of the elution conditions</i>	92
<i>4.1.1.1.9. Figures of merit</i>	93
4.1.1.1.9.1. Accuracy & Precision	93
4.1.1.1.9.2. Analytical Performance	93
<i>4.1.1.1.10. Matrix effect</i>	93
<i>4.1.1.1.11 Analysis of spiked human plasma with CAF</i>	94

4.1.2. Part I, Section (B)

Off-line preconcentration of caffeine using different sorbents (Untreated -PUF, CAF/IM-PUF, AY-GPUF, AY-IPUF)	104
4.1.2.1. Characterization of sorbents	104
<i>4.1.2.1.1. IR analysis</i>	104
4.1.2.2. Leaching of template from imprinted Polyurethane Foam (CAF/IM-PUF, AY-IPUF)	105
4.1.2.3. Optimization of the Off-Line preconcentration procedure	105
<i>4.1.2.3.1. Effect of pH on the extraction of caffeine</i>	105
<i>4.1.2.3.2. Sorption capacity</i>	107
<i>4.1.2.3.3. Effect of shaking time</i>	108
<i>4.1.2.3.4. Equilibrium adsorption isotherms</i>	109
<i>4.1.2.3.4.1. Langmuir model</i>	110
<i>4.1.2.3.4.2. Freundlich model</i>	111
<i>4.1.2.3.5. Effect of eluent concentration</i>	113
<i>4.1.2.3.6. Effect of eluent volume</i>	114

4.2. (Part II)

On-Line Preconcentration and Flow Injection Analysis (FIA) of some Doping Drugs Using Solid Phase Extraction Technique (SPE)	126
A. On-Line Automatic SPE	126
B. Comparison between On - Line and Off – Line SPE	127
C. On-line Separations and Preconcentration Procedures	128

4.2.1. Part II, Section (A)

Determination of Betamethasone – Velerate (BV), Caffeine (CAF), Hydrochlorothiazide (HCT) by On-Line Preconcentration Using BPB-PUF Sorbent	129
4.2.1.1. Characterization and stability of BPB-PUF	129
4.2.1.2. Chelating activity	130
4.2.1.3. Construction of the calibration curve	131
4.2.1.4. Extraction mechanism	132
4.2.1.5. Optimization of the on-line preconcentration procedure	133

<i>4.2.1.5.1. Effect of sample pH</i>	133
<i>4.2.1.5.2. Preconcentration time</i>	134
<i>4.2.1.5.3. Sample flow rate</i>	135
<i>4.2.1.5.4. Eluent study</i>	136
<i>4.2.1.5.5. Eluent volume</i>	137
<i>4.2.1.5.6. break through capacity</i>	138
<i>4.2.1.5.7. Analytical figures of merit</i>	139
<i>4.2.1.5.7.1. Linearity</i>	139
<i>4.2.1.5.7.2. LOD and LOQ</i>	140
<i>4.2.1.5.7.3. Validity of Beer's law</i>	141
<i>4.2.1.5.7.4. Precision and accuracy</i>	141
<i>4.2.1.5.8. Interference study</i>	142
<i>4.2.1.5.9. Applications</i>	143

4.2.2. Part II, Section (B)

Determination of Caffeine and Atenolol Using Alizarin Yellow G for Imprinted and Grafted Polyurethane Foam.	155
4.2.2.1. Preconditioning of PUF mini column for the online measurements	155
4.2.2.2. Construction of the calibration curve	156
4.2.2.3. Effect of sample pH	156
4.2.2.4. Effect of sample flow rate	157
4.2.2.5. Preconcentration time	158
4.2.2.6. Break through capacity	158
4.2.2.7. Optimization of the elution conditions	159
4.2.2.8. Analytical performance	160
4.2.2.9. Precision and durability of the sorbent	160
4.2.2.10. Limit of detection and limit of quantification	161
4.2.2.11. Interferences	162

List of Figures

No.	Figure name	Page No.
1.1.A	Effect of solution pH on the adsorption of CAF onto 0.1g untreated PUF and 20 mL of 5 mg L ⁻¹ CAF solution.	95
1.2.A	Effect of flow rate on retention of CAF (5μg mL ⁻¹) on untreated - PUF column and desorption with 4 mL, 0.15 mol L ⁻¹ HCl.	95
1.3.A	Effect of break through capacity on elution of CAF with untreated – PUF.	96
1.4.A	Influence of shaking time on the adsorption of CAF onto untreated PUF (0.1 g sorbent, 20 mL sample volume and 5 mg L ⁻¹ caffeine concentration and pH 8).	96
1.5.A	Lagergren plot for adsorption of CAF (20 mL sample at concentration 5 mg L ⁻¹) onto untreated PUF.	97
1.6.A	Intra-particle diffusion profile for CAF adsorption onto untreated PUF (0.1 g sorbent, 20 mL of 5 mg L ⁻¹ CAF concentration and pH 8).	97
1.7.A	Effect of preconcentration volume of CAF (1 μg mL ⁻¹) with untreated -PUF column and desorption with 0.15 mol L ⁻¹ HCl and 1.5 mL min ⁻¹ flow rate.	98
1.8.A	Adsorption isotherm of CAF onto untreated PUF (20 mL sample at pH 8.0, 30 min shaking time and 0.1 g sorbent at 25 °C).	98
1.9.A	Linear isotherm plots of Langmuir isotherm for CAF with untreated PUF.	99
1.10.A	Freundlich isotherm plot for CAF adsorption onto untreated-PUF.	99
1.11.A	Effect of HCl concentration on desorption of CAF (5 mg L ⁻¹) from untreated-PUF column.	100

No.	Figure name	Page No.
1.12.A	Effect of mL add of HCl (0.15 M) on retention of CAF (5 μ g mL ⁻¹) by using untreated-PUF column and desorption with 0.15mol L ⁻¹ HCl and 1.5 mL min ⁻¹ flow rate at 272.6 nm.	100
1.13.A	Analytical curve for preconcentration of CAF onto untreated PUF: 20 mL sample at pH 8, flow rate 1.5 mL min ⁻¹ and desorption with 4 mL, 0.15 mol L ⁻¹ HCl.	101
1.14.A	Standard addition curve for determination of CAF in 25 mL human plasma at pH 8, flow rate 1.5 mL min ⁻¹ and desorption with 4 mL, 0.15 mol L ⁻¹ HCl.	101
1.1.B	IR spectra of various polyurethane foam phases: AY-IPUF (A), AY-GPUF (B), free AY-IPUF from CAF (C), untreated-PUF (D), reloaded of CAF on AY-IPUF(E), CAF/IM-PUF (F), free IM-PUF from CAF (G).	115
1.2.B	Effect of HCl concentration on soaking of CAF/IM-PUF and AYI –PUF for 24h.	116
1.3.B	Effect of mL adds of (0.1 mol L ⁻¹) HCl on soaking of CAF/IM-PUF and AY –IPUF for 24h.	116
1.4.B	Effect of soaking time of CAF/IM-PUF and AY–IPUF on HCl (0.1 mol L ⁻¹).	117
1.5.B	Effect of pH sorption of CAF (5 μ g mL ⁻¹) onto (AYI, IM, untreated, AYG)-PUF.	117
1.6.B	The expected structure of (a) AY-GPUF and (b) CAF: AY-IPUF sorbents.	118
1.7.B	The plot of shacking time for the sorption of CAF onto (AYI, AYG, IM, untreated) -PUF.	119
1.8.B	Lagergren plot for the kinetic desorption of CAF onto (AYI, AYG, IM, untreated) - PUF.	119

No.	Figure name	Page No.
1.9.B	Extraction isotherms of CAF on to (A) (CAF/IM, AYI) - PUF, (B) (AYG, untreated)-PUF.	120
1.10.B	Langmuir adsorption isotherm of CAF on to (AYI, IM, AYG, untreated)-PUF.	121
1.11.B	Freundlich plot for sorption of CAF on to (AYI, IM, AYG, untreated)-PUF.	122
1.12.B	The effect of HCl concentration on the sorption of CAF ($5\mu\text{g mL}^{-1}$) onto CAF/IM, AYI, AYG, and untreated-PUF.	123
1.13.B	The effect of mL adds of HCl on the sorption of CAF ($5\mu\text{g mL}^{-1}$) onto IM, AYI, AYG, and untreated-PUF.	123
2.1.A	IR spectra of (A) untreated PUF and (B) BPB-PUF.	145
2.2.A	Extraction mechanism via ion – pair complex of BPB-PUF sorbent and HCT in acidic medium.	145
2.3.A	Variation of chelating activity at various concentrations of BV, HCT and CAF towards BPB-PUF sorbent.	146
2.4.A	UV-Spectrum of 5 mg L^{-1} from pure (a) CAF (b) HCT (c) BV, against blank.	146
2.5.A	Effect of the sample pH on the peak height absorbance of HCT and CAF (5.0 mg L^{-1}), 150s , 50s preconcentration time, sample flow rate 1.0 mL min^{-1} , desorption with 0.5 or 0.1 mol L^{-1} hydrochloric acid.	147
2.6.A	Effect of the sample pH, when adjustment was made by acetate and ammonia buffer or sodium hydroxide, on the peak height absorbance of BV (5 mg L^{-1}), 150s preconcentration time, sample flow rate 2.0 mL min^{-1} , desorption with 0.5 mol L^{-1} hydrochloric acid.	147
2.7.A	On-line preconcentration manifold for the determination of BV, CAF and HCT.	148
2.8.A	Effect of the preconcentration time on absorbance of BV, HCT and CAF (5.0 mgL^{-1}) with pH 9.5, 6.5, 6.5 and with flow rate 2.0, 1.0 and 1.0 mL min^{-1} .	148
2.9.A	Dependence of absorbance of the BV, HCT and CAF (5 mg L^{-1}), on the flow rate, with pH 9.5, 6.5, 6.5 and preconcentration time 150s, 150s and 50s.	149
