Prof. Dr. Osama Ezzat Abd El-Latef (Head of Mechanical Power Engineering, Faculty of Engineering in Shoubra, Benha University)

**Title of Thesis:** Numerical Investigation of Smoke Management in Airport International Arrivals Hall

**Key Words:** Smoke, HRR Effect, Fire Location Effect

### **Summary:**

The smoke resulted from fire has a fatal effect on the occupants. The toxic products resulted from fires consist of narcotic components (carbon monoxide, hydrogen cyanide) and irritant (organic smoke products and acid gases HCL) which can cause incapacitation, death or disorientation. The effect of toxicity depends on length of exposure and the concentration. Numerical investigation of smoke propagation in Hurghada airport international arrivals hall. The investigation of HRR effect, fire location effect and smoke extraction vent location effect on the height of smoke layer, evacuation time, CO concentration, visibility and temperature. Besides the investigation of passenger's number effect on evacuation time. Fire Dynamic Simulator V 6.1.2 is a powerful tool used to simulate 8 case studies in Hurghada airport international arrivals hall with main dimensions of (200 X 5 X 3) m. The fire is caused by an accidental fire in hand bags. FDS is validated with experiment conducted by Huo. It shows an acceptable agreement with available experimental data. Case 7 is the best case because it has the best tenability conditions (evacuation time, visibility, smoke layer height, carbon monoxide concentration and smoke layer temperature) and ensures safe evacuation for passengers and case 5 is the worst case because it has the worst tenability conditions (evacuation time, visibility, smoke layer height, carbon monoxide concentration and smoke layer temperature) and does not ensure safe evacuation for passengers (3 dead passengers) when the passenger's number is 1350. Case 8 is the best case because it ensures safe evacuation for passengers when the passenger's number is 500.

## **ACKNOWLEDGMENT**

Firstly, I would like to thank Almighty ALLAH, whom I owe everything, for his generousness and support through all my life.

I would like to thank Prof. Dr. Essam E. Khalil Hassan Khalil, Prof. Dr. Ahmed A. Medhat Ahmed and Dr. Esmail Mohamed Ali El-Bialy for their guidance and unremitting encouragement. I am grateful to them, and to all my respectful professors, for mentoring me throughout my undergraduate and graduate study.

I extend my gratitude to Eng. Osama Selim, Eng. Mohamed Ekram, Eng. Anas Mohamed and Eng. Hossam Khairy for their valuable suggestions and noteworthy discussions and Mr. Yasser Rashad for his guidance.

Finally, I owe a lifelong debt to my parents, my sister and my brothers for their motivation through finishing this thesis and their patience and care and for maintaining a perfect environment for study and research.

## TABLE OF CONTENTS

ACKNOWLEDGMENT .....	i
NOMENCLATURE .....	xiii
Greek Letters .....	xiv
Superscripts and Subscripts .....	xv
Abbreviations .....	xvi
CHAPTER 1 .....	1
1.1 General .....	1
1.2 Firefighting procedure.....	1
1.3 Objectives of smoke management system .....	2
1.3.1 Hazards of smoke .....	2
1.3.2 The purpose of buildings ventilation.....	5
1.4 Plugholing .....	7
1.5 Backdraft .....	7
1.6 Present work.....	8
CHAPTER 2 .....	9
2.1 The effect of water mist on smoke flow, temperature, species concentrations and smoke visibility: .....	9
2.2 The Influence of emergency effect on evacuation, smoke flow, concentration of CO and CO <sub>2</sub> and temperature distribution: .....	16
2.3 The effect of different ventilation modes in case of a train fire in a subway station on the temperature and visibility .....	22
2.4 The effect of fire smoke on the human body injury.....	29
2.5 The influence of metro train length and ventilation velocity on smoke back- layering.....	33

2.6 The Effect of fire location .....	41
CHAPTER 3 .....	45
3.1 Governing Equations.....	45
3.1.1 Continuity Equation .....	45
3.1.2 Momentum Equation .....	45
3.1.3 Energy Equation .....	46
3.1.4 Equation of State .....	46
3.2 FDS Description.....	46
3.2.1 Hydrodynamic Model.....	47
3.2.2 The Model of Combustion .....	47
3.2.3 Transport of Radiation.....	47
3.3 Visibility.....	47
3.4 Large Eddy Simulation (LES).....	48
3.5 Evacuation of Agents .....	48
3.5.1 Human Movement Model .....	49
3.5.2 Human and Fire Interaction.....	50
CHAPTER 4 .....	51
4.1 Hurghada airport international arrivals hall model description: -.....	51
4.2 Grid sensitivity: -.....	53
4.3 Simulation cases: - .....	54
4.4 Validation process: - .....	55
4.5 The measured parameters: - .....	56
4.6 The simulation of the FDS model: -.....	56
4.7 The results of the FDS validation: - .....	57
CHAPTER 5 .....	58

5.1 HRR effect .....	58
5.1.1 Effect on visibility .....	58
5.1.2 Effect on temperature .....	63
5.1.3 Effect on CO concentration .....	68
5.1.4 Effect on smoke layer height .....	71
5.1.5 Effect on evacuation .....	72
5.2 Effect of fire source location .....	73
5.2.1 Effect on visibility .....	74
5.2.2 Effect on temperature .....	79
5.2.3 Effect on CO concentration .....	84
5.2.4 Effect on smoke layer height .....	87
5.2.5 Effect on evacuation .....	88
5.3 Effect of smoke extraction vent location .....	89
5.3.1 Effect on visibility .....	91
5.3.2 Effect on temperature .....	96
5.3.3 Effect on CO concentration .....	101
5.3.4 Effect on smoke layer height .....	104
5.3.5 Effect on evacuation .....	105
CHAPTER 6 .....	107
6.1 CONCLUSIONS .....	107
6.2 Recommendations for future work .....	107
