Indicators for Determination of the Bacteriological Quality of Bottled Water

٢٣٩٠

THESIS

*Submitted to The High Institute of Public Health,
Alexandria University,*

in partial fulfillment of the requirements for the

Degree of Master of Public Health

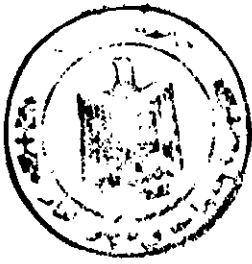

(Microbiology)

By

Eihan Adel Mohammed Jawfik El Batouti

MBBCh, Faculty of Medicine, University of Alexandria, 1990

**High Institute of Public Health
Alexandria University
2002**

SUPERVISORS

Prof. Dr. Aleya Abdel Gawad Abbas

Professor of Microbiology

High Institute of Public Health

Alexandria University

Dr. Abeer Aly Omar

Lecturer of Microbiology

High Institute of Public Health

Alexandria University

Acknowledgment

My foremost thanks to GOD, the most gracious and merciful, for helping me complete this work.

Words cannot express my heartfelt thanks and deepest appreciation to **Prof. Dr. Aleya Abdel Gawad**, Professor of Microbiology, High Institute of Public Health, University of Alexandria, for her indispensable and labrous effort to accomplish this work. I am profoundly grateful for her continuous encouragement, support, care, precious meticulous advise and guidance throughout the whole course of work. It has truly been a pleasure and honour working under her excellent and wonderful supervision.

I would like to extend my deepest and sincere gratitude to **Dr. Abeer Aly Omar**, Lecturer of Microbiology, High Institute of Public Health, University of Alexandria for her valuable suggestions, constructive criticism, fruitful efforts, continuous guidance, support and keen supervision.

I wish to truly thank all members of the staff and personnel of the Microbiology Department for helping me bring this work to light. I would also like to take the opportunity in thanking all those who have cooperated in supplying me with the tap water samples.

Last but not least, I owe lots of thanks and warm gratitude to my family for their endless support, help, understanding and patience, without which I would have never fulfilled this piece of work.

List of Tables

Table	Page
(I) Main water-related diseases	5
(II) Types and sources of bottled water	8
(III) General review of bottled water treatment systems	9
(IV) Epidemiologic characteristics of diarrhoea-producing <i>Escherichia coli</i>	21
(V) Drinking bottled water guidelines	43
(VI) Results of the examined bottled water samples according to their brand	65
(VIIa) Distribution of the examined bottled water samples according to their acceptability (in relation to HPC at 22°C) and their brand.	70
(VIIb) Correlation between HPC at 22°C and the examined brand of bottled water samples	71
(VIIIa) Distribution of the examined bottled water samples according to their acceptability (in relation to HPC at 37°C) and their brand.	74
(VIIIb) Correlation between HPC at 37°C and the examined brand of bottled water samples	75
(IX) Distribution of the isolated organisms according to the examined brand of bottled water samples	77

Table	Page
(X) Correlation between total coliforms MPN/100 ml and the examined brand of bottled water samples	79
(XI) Correlation between fecal coliforms MPN/100 ml and the examined brand of bottled water samples	81
(XII) Correlation between <i>E.coli</i> MPN/100 ml and the examined brand of bottled water samples	83
(XIII) Correlation between <i>P.aeruginosa</i> MPN/100 ml and the examined brand of bottled water samples	85
(XIV) Correlation between <i>S.aureus</i> MPN/100 ml and the examined brand of bottled water samples	87
(XV) Results of the examined bottled water samples according the brand and the condition of the purchased bottle (unrefrigerated and refrigerated)	89
(XVI) HPC of the examined water samples according to the condition of purchased bottle (unrefrigerated and refrigerated) and storage at 4°C for 2 days	92
(XVII) Results of examined bottled water samples according to the storage time	94
(XVIII) Comparison between the results of the examined bottled and tap water samples	96

Table		Page
(XIX)	Comparison between HPC at 22°C and 37°C for the bottled and tap water samples	98
(XX)	Frequency of isolation of total coliforms, fecal coliforms and <i>E.coli</i> from the examined bottled and tap water samples	100

List of Figures

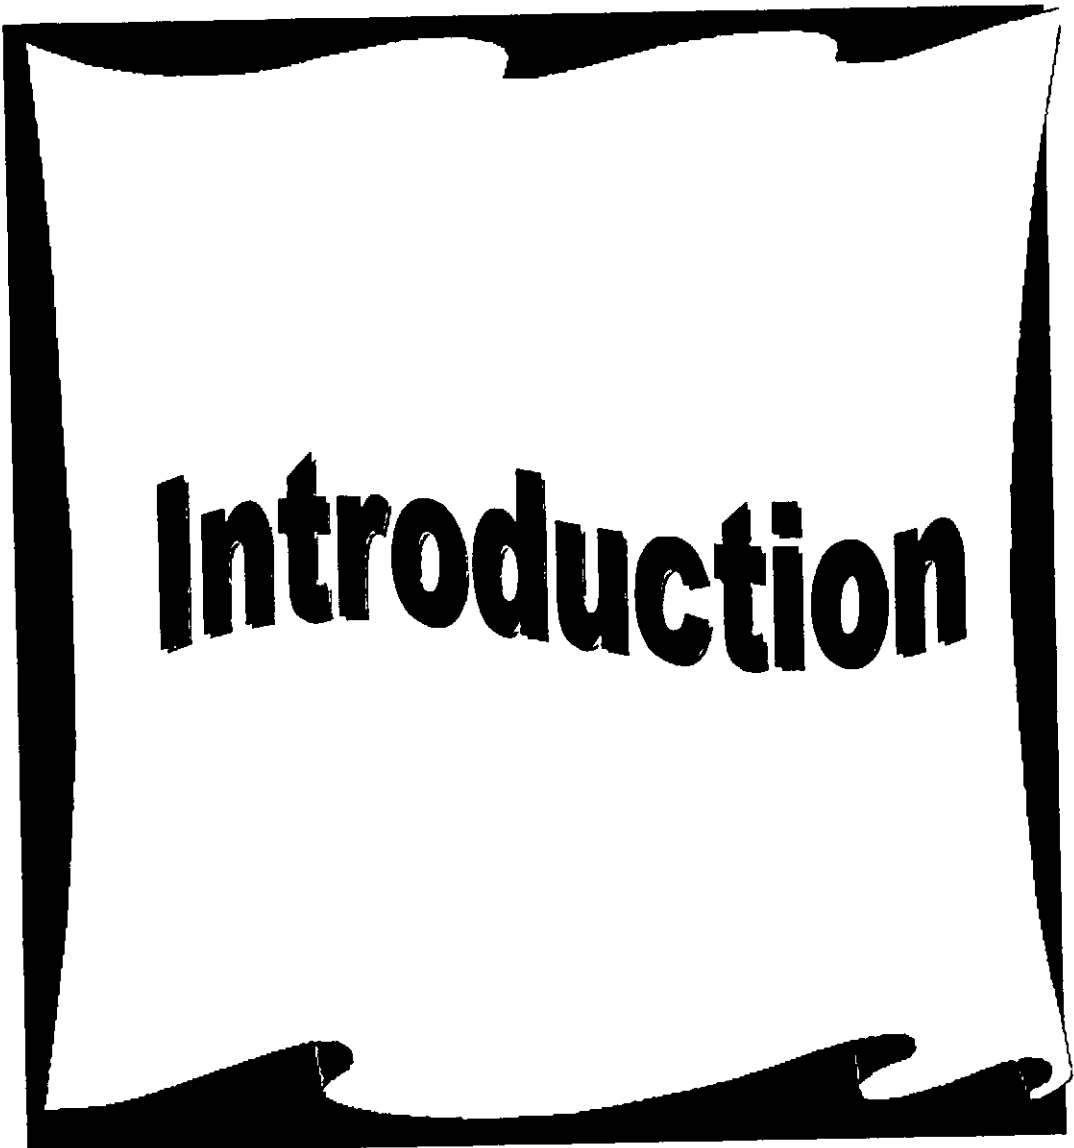

Figure	Page
(1) HPC < 1 cfu/ml at 37°C on standard PCA	50
(2) An uncountable HPC at 37°C on standard PCA	50
(3) Tube (a) LTB tube showing turbidity and gas production.	53
Tube (b) BGLBB tube showing turbidity and gas production.	
(4) EC tube showing turbidity and gas production	53
(5) Black colonies of <i>E.coli</i> with a metallic sheen on an L-EMB agar plate	55
(6) The IMViC reaction of <i>E.coli</i>	55
Tube (a) shows a positive indole test	
Tube (b) shows a positive methyl red test	
Tube (c) shows a negative Voges-Proskauer test	
Tube (d) shows a negative citrate test.	
(7) Tube (a) shows the greenish pigmentation of the positive asparagine enrichment broth. (Presumptive test).	57
Tube (b) shows the pink red colouration of the positive acetamide agar slant. (Confirmed test).	
(8) Tube (a) shows another positive acetamide agar slant	57
Tube (b) shows a negative acetamide agar slant	
(9) Green pigmented colonies of <i>P.aeruginosa</i> surrounded by clear zones due to casein hydrolysis on a skimmed milk agar plate	58

Figure		Page
(10)	Yellow colonies of <i>S.aureus</i> surrounded by opaque zones due to lipovitellin-lipase activity on an LSM agar plate	61
(11)	Results of the examined bottled water samples according to their brand	66
(12)	Percentage of acceptable and unacceptable samples from a total of 300 bottled water samples	67
(13)	Results of the acceptable examined bottled water samples according to their brand and the condition of the purchased bottle (unrefrigerated and refrigerated)	90
