Abstract

Parental attitude, behavioral reactions and psychosocial support are important variables that affect the coping and behavioral reactions as the anxiety, depression and aggression in children with chronic illness. The study was carried on a sample of 75 chronically ill children of different diagnoses compared to a control group of (30) healthy children and their parents assessing depression and anxiety. Results showed high depression and other psychiatric symptoms among the chronically ill children and their parents than the control group

Key words:

Chronic illness, Child depression, Child anxiety, Child aggression, Salivary cortisol, Coping styles.

Acknowledgement

"Thanks are due to God, The Beneficent, the merciful

I would like to express my gratitude to those who have helped me in accomplishing this work.

I would like to express my gratitude, thanks and appreciation to **Professor Dr. Fatma Abdel Latif Mousa**, Professor of Psychiatry, Cairo University for her valuable advice and sincere help.

I am indebted to **Professor Dr. Lamis El Ray** Professor of psychiatry for her help, concern and enthusiastic attitude.

My thanks and appreciation are due Professor Dr. Ola shaheen

Professor of psychiatry for her sincere concern and great help.

I would like to thank **Professor Dr. Said Abd Elazim** Professor of psychiatry and head of psychiatry department, Cairo university, for his encouragement and helpful attitude.
