# EARLY VITRECTOMY FOR DIABETIC VITREOUS HAEMORRHAGE IN TYPE 2 DIABETES MELLITUS

*Thesis*

*Submitted for partial fulfillment of M.D. degree*  
In OPTHALMOLOGY

*K.V. El-S*

**By**

*Khaled El-Ghonemy El-Kotb*  
(M.B., B.Ch., M.Sc.)

**Discussed By**

*[Signature]* **Prof. Dr. El-Saieed Ebraheem El-Dsouky**  
Professor of Ophthalmology  
Faculty of Medicine, Tanta University

*[Signature]* **Prof. Dr. Mostafa Kamal Nassar**  
Professor of Ophthalmology,  
Faculty of Medicine, Menoufiya University.

*[Signature]* **Prof. Dr. Hassan Gamal El-Din Farahat**  
Professor of Ophthalmology,  
Faculty of Medicine, Menoufiya University.

# EARLY VITRECTOMY FOR DIABETIC VITREOUS HAEMORRHAGE IN TYPE II DIABETES MELLITUS

*Thesis*

*Submitted for partial fulfillment of M.D. degree*  
**In OPHTHALMOLOGY**

**By**

***Khaled El-Ghonemy El-Kotb***  
(M.B., B.Ch., M.Sc.)

**Supervised By**

***Prof. Dr. Saber Hamed El-Sayed***

Professor and head of Ophthalmology Department  
Faculty of Medicine, Menoufiya University

***Prof. Dr. Omar Mohammed Afiffi***

Professor of Ophthalmology,  
Faculty of Medicine, Zagazig University.

***Prof. Dr. Mostafa Hamed Nabih***

Professor of Ophthalmology,  
Faculty of Medicine, Cairo University.

***Prof. Dr. Hassan Gamal El-Din Farahat***

Professor of Ophthalmology,  
Faculty of Medicine, Menoufiya University.

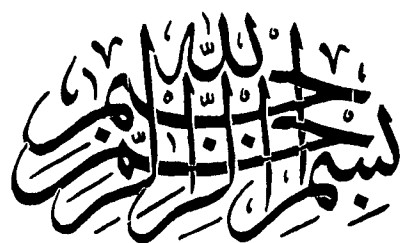

***Prof. Dr. Dominic McHugh***

Consultant of Ophthalmology,  
King's College Hospital, London, UK.

FACULTY OF MEDICINE  
MENOUEFIYA UNIVERSITY  
**2005**

﴿قَالُوا سُبْحَانَكَ لَا عِلْمَ لَنَا إِلَّا هَا

عَلَّمْتَنَا إِنَّكَ أَنْتَ الْعَلِيمُ الْحَكِيمُ﴾

صدق الله العظيم

{البقرة ٣٢}

# LIST OF TABLES

<i>Table</i>	<i>Page</i>
Table (1) Prevalence of Retinopathy by Duration of Diabetes	10
Table (2) Prevalence of Retinopathy by Severity Level	10
Table (3) Ten-Year Incidence of any retinopathy, Progression of Retinopathy, Progression to Proliferative Retinopathy	11
Table (4) Causes of vitreous haemorrhage in different studies	17
Table (5) Natural Evolution of Massive Vitreous Haemorrhage In Patients with Diabetic Retinopathy	28
Table (6) Current Indications for Vitrectomy in Diabetic Eye Disease	44
Table (7) Objectives of vitrectomy for severe diabetic retinopathy	49
Table (8) Preoperative eye examination of studied patients.	82
Table (9) Iatrogenic and acute postoperative complications.	84
Table (10) Intraoperative findings in the studied patients in comparison to DRVS findings	85
Table (11) Lens condition at different times of follow up	86
Table (12) Retina condition at different times of follow up	88
Table (13) Occurrence of vitreous haemorrhage during different times of follow up	90
Table (14) Visual acuity of studied patients before operation and at one month after	92
Table (15) Visual acuity at six month after operation and before operation	93
Table (16) Visual acuity of studied patients before operation and at 12 months after operation	94
Table (17) Visual acuity of studied patients before operation and at 18 months of operation	95
Table (18) Visual acuity of studied patients before operation and at 24 months of operation	97
Table (19) Comparison of the distribution of best preoperative visual acuity and visual acuity at 12 months	99
Table (20) Comparison of the distribution of best preoperative visual acuity and at 24 months	100
Table (21) Comparison of visual acuity score before operation and at 12 months	101
Table (22) Comparison of visual acuity score before operation and after 24 months	102
Table (23) Comparison of visual acuity score at different times of follow up	103
Table (24) Comparison between proportions of patients with VA $\geq$ 6/12 or no light perception between early vitrectomy group of DRVS (1985) and current study at 12 and 24 months	105
Table (25) Comparison of proportions of patients with visual acuity $\geq$ 6/12 and no light perception between deferral group of the DRVS (1985) and the current study at 12 and 24 months	107

Table (26) Comparison between the early vitrectomy group of DRVS and current study regarding incidence of retinal detachment	109
Table (27) Comparison between the deferral group of the DRVS and current study regarding incidence of retinal detachment	111

# LIST OF FIGURES

Figure	Page
Figure (1) Algorithm for diagnosing diabetes. PG, venous plasma glucose; challenge, 75g oral glucose tolerance test based on WHO (1999) guidelines.	5
Figure (2) Different possible locations for vitreous haemorrhage .	14
Figure (3) Various pathologic mechanisms of vitreous haemorrhage, (1) mechanical disruption of normal retinal vessels; (2) bleeding from diseased retinal vessels or abnormal neovessels ;(3a&3b) extension of haemorrhage through the retinal from other sources.	16
Figure (4) Tangential traction is released by segmenting the formed vitreous and proliferative tissue between areas of retinal adhesions.	52
Figure (5) A delaminating technique is used to excise areas of proliferative attachment to the retina along the inner surface of the internal limiting membrane with vitreous scissors.	53
Figure (6) An en bloc vitrectomy technique is performed with scissors passing through a tunnel in the formed vitreous	55
Figure (7) Anterior to posterior vitreous traction forces separate the formed vitreous from the retina when the areas of vitreoretinal traction are released using en bloc dissection	56
Figure (8) Series Ten Thousand® Vitrectomy machine (Alcon)	72
Figure (9) Accurs® vitrectomy machine (Alcon)	72
Figure (10) BSS® solution (Alcon)	72
Figure (11) Zeiss OPMI VISU 200®	72
Figure (12) Topcon OMS 600®	72
Figure (13) Perfluoropropane C3F8 lable	72
Figure (14) Different probes used in vitrectomy	73
Figure (15) The curved diode laser probe	73
Figure (16) Different vitreous scissors and forceps	74
Figure (17) Lenses used for vitrectomy in KCH, London	74
Figure (18) The diode laser (810 nm) meachine OcuLight SLx® , Iris medical	75
Figure (19) Vitrectomy pack for Accurs® machine, Alcon	75
Figure (20) Preoperative lens status in studied patients	83
Figure (21) Preoperative vitreous haemorrhage in studied patients	83
Figure (22) Lens condition at different times of follow up	87
Figure (23) Retinal condition at different times of follow up	89
Figure (24) Occurrence of vitreous haemorrhage during different times of follow up	91
Figure (25) Visual acuity of studied patients before operation and at 18 months of operation	96

Figure (26) Visual acuity of studied patients before operation and at 24 months of operation	98
Figure (27) Comparison of visual acuity score at different times of follow up	104
Figure (28) Comparison between proportions of patients with VA $\geq$ 6/12 or no light perception between early vitrectomy group of DRVS (1985) and current study at 12 and 24 months	106
Figure (29) Comparison of proportions of patients with visual acuity $\geq$ 6/12 and no light perception between deferral group of the DRVS(1985) and the current study at 12 and 24 months	108
Figure (30) Comparison between the early vitrectomy group of DRVS and current study regarding incidence of retinal detachment	110
Figure (31) Comparison between the deferral group of the DRVS and current study regarding incidence of retinal detachment	112
Figure (32) Preoperative ocular ultrasounds showing vitreous haemorrhage with no signs of tractional retinal detachment in patients with type 2 diabetes mellitus.	113
Figure (33) Patient No 2, 1 <sup>st</sup> postoperative day	114
Figure (34) Patient No 3, 1 <sup>st</sup> postoperative day	114
Figure (35) Patient No 5, 6 months postoperative visit	114
Figure (36) Patient No 20, 1 <sup>st</sup> postoperative day	114
Figure (37) Patient No 20, 3 months postoperative visit	114
Figure (38) Patient No 20, 18 months postoperative visit	114
Figure (39) View of wide field lense photographed via the operating microscope	115
Figure (40) Photograph of case No. 1 in the first postoperative day showing diode laser scores	115
Figure (41) 1st postoperative fundus photograph of patient no. 26 with vitreous haze secondary to mild recurrent vitreous haemorrhage	116
Figure (42) Fundus photograph of patient no. 28 with C3F8 in 1st postoperative day	116
Figure (43) Photograph of case no. 40, 3 months postoperatively	117
Figure (44) Photograph of the same patient 6 months postoperatively	117
Figure (45) Photograph of patient no. 42, one month postoperatively	118
Figure (46) Photograph of patient no. 45, 24 months postoperatively	118
Figure (47) Photograph of anterior segment of patient no. 33 showing NVI (iris neovessels).	119
Figure (48) Photograph of the same patient with PCIOL 18 months postoperatively	119
Figure (49) Posterior subcapsular cataract of patient no. 26, 12 months postoperatively	120
Figure (50) Fundus photograph of patient no. 37 with recurrent retinal detachment with impending phthisis bulbi	120
