ELECTRONIC REQUIREMENTS FOR DETERMINATION
OF HAZARDOUS AND RADIOACTIVE CONTAMINANT
AND DOSE ASSESSMENT MODELING AROUND
NUCLEAR INSTALLATIONS

By

ADEL ABDEL-SAMII HAMED

B.Sc. Engineering in Electronics, Zagazig University, 1986
M.Sc. in Environmental Science, Ain Shams University, 1998

A Thesis Submitted in Partial Fulfillment of the
Requirement for the Doctor of Philosophy
In
Environment Science

Department of Environmental Engineering
Institute of Environmental studies & Research
Ain Shams University, Cairo

Under the Supervision of:

Prof. Dr. Mohamed. N. Salh

Professor in Electronic and Communication
Engineering Department - Ain Shams University.

Prof. Dr. Mohamed. G. El-Malky

Professor in Biological and Natural Science
Department - Institute of Environmental studies
and Research - Ain Shams University.

Prof. Dr. Khaled. Sakr

Professor of construction - Hot Lap. Center -
Atomic Energy Authority.

2009

ACKNOWLEDGMENT

The author wishes to express his gratitude to Prof. Dr. Mohamed. N. Salh Professor in Electronic and Communication Engineering Department - Ain Shams University and deepest thanks to Prof. Dr. Mohamed. G. El-Malky Professor in Biological and Natural Science Department - Institute of Environmental studies and Research - Ain Shams University and Prof. Dr. Khaled. Sakr Professor of construction - Hot Lap. Center - Atomic Energy Authority for their unlimited help, kind supervision and valuable guidance.

Thanks are also to all members and colleagues in Hot Laboratories Center, Atomic Energy Authority for their kind help and sympathy.

ABSTRACT

The radioactive or hazardous wastes which disposed, after their treatment and conditioning in cement or polymer, inside a surface or underground repository. According to the change in metrological conditions, radioactive ions may release through soil layer and may contaminate underground water.

Several investigations were performed to study the electronic requirements for determination of hazardous and radioactive contaminant and dose assessment modeling around nuclear installations. Several investigations were determined; choice of a suitable site to construct nuclear installation and repository, monitoring, radioactive survey and soil analysis of the site, measuring of radioactivity in soil, determination of types of soil (sand, clay, gravel,...etc) under investigation up to certain depths, capacity of soil to fix toxic ions, treatment and disposal of radioactive, organic and hazardous wastes and methodology of toxic or radioactive ions released from repositories to underground water.

The mathematical formulation to determine water flow through porous media was performed based on, continuity of fluid, continuity of solid, motion of fluid according to Darcy's law equation of the state and law of consolidation of media. A proposed computer program was done and consisted of a main program, a section of data and many subroutines.

CHAPTER-1 INTRODUCTION 19

1.1. Aim of the Work	22
1.2. Literature Review	23
1.2.1. Survey of Radioactivity in the Environment	24
1.2.2. Performance Assessment Methodology for Low-Level Radioactive Waste Disposal	32
1.2.3. Release of Toxic Ions to the Environment	37
1.2.4. Determination of Radioisotopes in Soil	39
1.2.5. Treatment of Organic Wastes	44
1.2.5.1. Treatment of organic wastes using clay	44
1.2.5.2. Electrical decomposition of organic compound	49
1.2.5.3. Electrochemical decomposition of organic compound	52
1.2.5.4. Bio-absorption of organic compound	53

CHAPTER-2 MATERIALS and METHODS 55

2.1. Equipments	55
2.1.1. High Purity Germanium System	55
2.1.2. Survey Meter	57
2.1.3. Spectrophotometer	57
2.1.4. pH Meter	57
2.1.5. Balances	57

2.1.6. Mixer	58
2.1.7. Electrochemical Cells	58
2.1.8. Computer	58
2.2. Calibration	59
2.2.1. Monitoring Instruments	59
2.2.2. Germanium Detector	60
2.3. Chemicals	62
2.4. Calculations	63
2.4.1. Arithmetic Mean	63
2.4.2. Standard Deviation	63
2.4.3. Standard Error	64
2.4.4. Calculations of the Physical Properties of Soil.....	65
2.4.4.1. Density	65
2.4.4.2. Water absorption	65
2.4.4.3. Porosity	66
2.4.5. Mathematical Equations	66
2.4.5.1. Dose equivalent	66
2.4.5.2. Dose assessment due to release of radioisotopes	67
2.5. Methods	67
2.5.1. Interaction between Clay and Some Ions	67
2.5.1.1. Fixation of ions on clay	67
2.5.1.2. Fixation of phenol on clay	68
2.5.1.3. Electrical decomposition of phenol	69
2.5.2. Preparation of Environmental Samples	69
2.6. Site Location	69
2.6.1. Disposal Site Location	70
2.6.2. Soil Investigations	71

2.7. Meteorological Investigation	71
2.7.1. Relative Humidity	71
2.7.2. Rain	73

CHAPTER-3

RESULTS and DISCUSSION 75

3.1. Background Radio-Survey of Studied Site	75
3.2. Determination of Radioactivity in the Soil of the Studied Area	77
3.2.1. Determination of Radioactivity in the Soil of the Studied Area around the Reactor	77
3.2.2. Dose Assessment Produced from Soil	99
3.2.3. Determination of Radioactivity in Certain Materials found in the Studied Area	104
3.3. Dose Assessment Modeling Around Nuclear Installations	117
3.3.1. Soil Investigations	118
3.3.1.1. Experimental characterization of soil	118
3.3.1.2. Soil layers	118
3.3.1.3. Determination of soil size and penetration time of liquid through soil	124
3.3.1.4. Radiometric measurements of samples	126
3.3.2. Electrochemical Treatment of Organic Wastes	127
3.3.2.1. Treatment of phenol using electrochemical cell composed of copper-copper electrodes	128
3.3.2.2. Interaction of organic compounds with clays	140
a. Fixation of phenol on kaolin clay	140
b. Release of phenol which fixed on kaolin clay	152

3.3.3. Fixation of Phenol on Cement	157
3.3.4. Fixation of Ce III and Co II on Kaolin Clay	158
3.3.5. Integrated Systems to Treat Phenol	160
3.4. Requirements for Methodology Models	164
3.4.1. Water Flow through Saturated - Unsaturated Porous Media	164
3.4.2. Data Requirements for Ground Water Flow Modeling	164
3.4.3. Data Requirements for Source - Term Modeling	165
3.4.4. Procedure for Applying the Methodology	165
3.5. The Performance Assessment Methodology to Determent the Released Waste to the Environment ...	167
3.6. Mathematical Determination of Dose from Radioisotopes Released to the Environment	170
3.6.1. The Governing Equations	170
3.6.1.1. Continuity of fluid	170
3.6.1.2. Continuity of solid	170
3.6.1.3. Motion of fluid (Darcy's law)	171
3.6.1.4. Equation of the state	172
3.6.1.5. Law of consolidation of media	172
