

Synthesis, Characterization and applications of cellulosic products with high water absorbing capacity

A Thesis
Submitted by

Dalia Refaat El-Sayed Mohammed

(M. Sc. Applied organic chemistry 2012)

*In the Partial Fulfillment of the Requirements for the Degree
of*

Doctor of Philosophy (Ph.D)

*To
Chemistry Department
Faculty of Science
Ain Shams University*

2015

Approval Sheet

Ph.D. Thesis

Synthesis, Characterization and applications of cellulosic products with high water absorbing capacity

Submitted by

Dalia Refaat El-Sayed Mohammed

This thesis has been approved for submission by supervisors:

Thesis supervisors

Approved

Prof. Dr. Abd El-Gawad M. Rabia
Faculty of Science - Ain Shams University

Prof. Dr. Ali Ali Hebeish
National Research Centre

Prof. Dr. Mohamed Hussien El-rafie
National Research Centre

Prof. Dr. Ali Sayed Ali
National Research Centre

Head of Chemistry Department

Prof. Dr: Hamed Ahmed Derbala

بِسْمِ اللَّهِ الرَّحْمَنِ الرَّحِيمِ

صَدَقَ اللَّهُ الْعَظِيمُ

ACKNOWLEDGMENT

ACKNOWLEDGMENTS

All praises and thanks are to Allah, the Lord of the world, the most Beneficent, the most Merciful for helping me to accomplish this work.

I would like to express my sincerest and deepest appreciation to Prof. Dr. Abd El-Gawad Mohamed Rabia, Professor of organic chemistry, Faculty of Science, Ain Shams University, for his support, enthusiasm, valuable discussion, criticism and keen interest in the present work.

I would like to express my sincere gratitude to the thesis supervisors Prof. Dr. Ali Hebeish (D.Sc.), Professor of Textile Chemistry and Technology, National Research Centre, Prof. Dr. Mohamed Hussein El-Rafie and Prof. Dr. Aly Sayed Aly, for their continuous support, motivation and outstanding scientific guidance and patience throughout this research work, beside supporting me in the research work and giving me their opinion and directives every time, when I

needed it. Also, many thanks to the advisors and mentors for suggesting the thesis theme and the plan of the work as well as for their valuable discussion. They always inspired me through their guidance and encouragement during the entire course of this work. Beside the extensive knowledge that they convey through many ways, they humbly demonstrated me the value of scientific discipline that I adapt as a positive attitude to appreciate science. I am thankful for their patience for letting me take my own directions in research, and develop my personal approach to science.

In additional too, I would like to express the gratitude to Prof. Lidietta Giorno (ITM-CNR, Italy) for her acceptance to contribute in this research work, beside her supporting and guides during my stay in Italy.

I would like to thank those closest to me, whose presence helped make the completion of my thesis possible. These are my mother, brothers, sister, and husband. My mother has always encouraged me and guided me to independence. I am grateful to her and amazed at her generosity.

My sincere thanks to my husband, Dr. Mohamed Yahia, this study is the result of him support, encouragement, help and love.

Last but certainly not least I am highly appreciated for all staff in the Textile Research Division of National Research Center. Special acknowledgment is also made to the Department of Chemistry at the University of Ain Shams for its sponsorship and for providing the use of its facilities.

Dedication

This thesis is dedicated to

My

Parents, Husband, Brothers, and Sister

AIM OF THE PRESENT WORK	
ABSTRACT OF THE THESIS	

CHAPTER I : ABSORBENT HYDROGELS BASED ON CELLULOSE DERIVATIVES FROM CONCEPT TO IMPLEMENTATION

I. Introduction	1
I.1. Cellulose as a substrate	2
I.1.1. Structural aspects of cellulose	2
I.1.2. Cellulose reactivity	7
I.1.3. Chemical modification of cellulose	11
I.2. Methods of cellulose graft copolymerization	13
I.3. Hydrogel Formation	17
I.3.1.Types of Superabsorbent Hydrogels	19
I.3.1.1. Acrylic-based hydrogels	19
I.3.1.2.Carboxymethylcellulose(CMC)-based hydrogels	19
I.3.1.3. Hydroxyethyl cellulose (HEC) and other cellulose- derivative-based hydrogels	20
I.3.1.4. Copolymers of CMC by reaction with monomers	20
I.3.1.5. Cellulose-synthetic graft copolymer hydrogels	21
I.3.1.6. Hydrogels based on cellulose with other natural- based polymers	21
I.3.2. Major Covalent Crosslinking Agents	22
