List of Abbreviations

μmol/L	micromoles/litre
ABG	Arterial Blood Gases
AC	Activated Charcoal
AEDs	Antiepileptic Drugs
ANOVA test	Analysis of Variance
CBZ	Carbamazepine
CBZE	Carbamazepine Epoxide
CHP	Charcoal Hemoperfusion
CNS	Central Nervous System
CSF	Cerebrospinal Fluid
CVS	Cardiovascular
CVVHDF	Continuous Venovenous Hemodiafiltration
CYPs	Cytochromes P450
ECG	Electrocardiography
FDA	Food and Drug Administration
F	Variance Analysis of ANOVA
GABA	Gamma Amino Butyric Acid
GCS	Glasgow Coma Scale
GL	Gastric Lavage
HD	Hemodialysis
ICU	Intensive Care Unit
IV	Intravenous
MAOIs	Monoamine Oxidase Inhibitors
MDAC	Multiple Dose Activated Charcoal
mEH	Microsomal Epoxide Hydrolase
mg	Milligram

List of Abbreviations

mL	Milliliter
msec	Millisecond
P	Probability
PGCS	Pediatric Glasgow Coma Scale
ROC curve	Receiver Operating Characteristic Curve
SD	Standard Deviation
SPSS	Statistical Package for Social Science
SR	Sustained Release
UK	United Kingdom
X²	Chi-square
XR	Extended Release

List of Tables

Table No.	Title	Page
Table (1):	Normal heart rate by age in children ...	38
Table (2):	Normal blood pressure by age in children	39
Table (3):	Student's t-test comparing group Ia (non-complicated) and group Ib (complicated) adult patients as regards age distribution	50
Table (4):	Student's t-test Comparison between group IIa (non-complicated) and group IIb (complicated) pediatric patients as regards age distribution.....	51
Table (5):	Chi-Square test comparing group Ia (non-complicated) and group Ib (complicated) group of adult patients as regards sex distribution	53
Table (6):	Chi-Square test comparison between group IIa (non-complicated) and group IIb (complicated) pediatric patients as regards sex distribution.....	54
Table (7):	Chi-Square test comparison between group Ia (non-complicated) and group Ib (complicated) of adult patients as regards manner of toxicity	56

List of Tables

Table No.	Title	Page
Table (8):	Chi-Square test comparison between group IIa (non-complicated) and group IIb (complicated) of pediatric patients as regards manner of toxicity	57
Table (9):	Student's t-test comparison between group Ia (non-complicated) and group Ib (complicated) of adult patients as regards the delay time (time between drug ingestion and arrival to the PCC-ASUH)	58
Table (10):	Student's t-test comparison between group IIa (non-complicated) and group IIb (complicated) of pediatric patients as regards the delay time (Time between the exposure and arrival to the PCC-ASUH)	59
Table (11):	Student's t-test comparison between group Ia (non-complicated) and group Ib (complicated) of adult patients as regards the vital data.....	62
Table (12):	Student's t-test comparison between group IIa (non-complicated) and group IIb (complicated) of pediatric patients as regards the vital data.....	63
Table (13):	Frequency of neurological manifestations in 108 adult patients ...	65

List of Tables

Table No.	Title	Page
Table (14):	Student's t-test Comparison between group Ia (non-complicated) and group Ib (complicated) of adult patients as regards Glasgow Coma Scale (GCS)	66
Table (15):	Chi-Square test comparison between group Ia (non-complicated) and group Ib (complicated) of adult patients as regards neurological manifestations	67
Table (16):	Frequency of neurological manifestations in 92 pediatric patients.....	68
Table (17):	Student's t-test comparison between group IIa (non-complicated) and group IIb (complicated) of pediatric patients as regards Glasgow Coma Scale (GCS)	69
Table (18):	Chi-Square test comparison between group IIa (non-complicated) and group IIb (complicated) of pediatric patients as regards neurological manifestation	70
Table (19):	Frequency of cardiovascular manifestations and ECG changes in 108 adult patients.....	72

List of Tables

Table No.	Title	Page
Table (20):	Chi-Square test comparison between group Ia (non-complicated) and group Ib (complicated) adult patients as regards cardiovascular manifestations	73
Table (21):	Student's t-test comparison between group Ia (non-complicated) and group Ib (complicated) adult patients as regards ECG Changes	74
Table (22):	Frequency of cardiovascular manifestations and ECG changes in 92 pediatric patients	75
Table (23):	Chi-Square test comparison between group IIa (non-complicated) and group IIb (complicated) pediatric patients as regards cardiovascular manifestations	76
Table (24):	Student's t-test comparison between group IIa (non-complicated) and group IIb (complicated) pediatric patients as regards ECG changes	77
Table (25):	Student's t-test comparison between group Ia (non-complicated) and group Ib (complicated) adult patients as regards peak serum carbamazepine level and time passed to reach peak level	78

List of Tables

Table No.	Title	Page
Table (26):	Student's t-test comparison between group IIa (non-complicated) and group IIb (complicated) pediatric patients as regards peak measured serum carbamazepine level and time passed to reach peak level.....	80
Table (27):	Chi-Square test comparison between group Ia (non-complicated) and group Ib (complicated) adult patients as regards management	83
Table (28):	Chi-Square test comparison between group IIa (non-complicated) and group IIb (complicated) pediatric patients as regards management	84
Table (29):	Chi-Square test comparison between group Ia (non-complicated) and group Ib (complicated) adult patients as regards outcome	87
Table (30):	Frequency of complications during hospital stay in 28 complicated adult patients.....	88
Table (31):	Chi-Square test comparison between group IIa (non-complicated) and group IIb (complicated) pediatric patients as regards outcome.....	89

List of Tables

Table No.	Title	Page
Table (32):	Frequency of complications during hospital stay in 24 complicated pediatric patients	91
Table (33):	Pearson correlation test between peak serum carbamazepine level and studied ECG findings in adult patients	93
Table (34):	Student's t-test relation between peak serum carbamazepine level and complications	94
Table (35):	Student's t-test relation between peak serum carbamazepine level of adult patients and ICU admission	95
Table (36):	ANOVA one-way statistical analysis to compare between peak serum carbamazepine level of adult patients and duration of hospital stay	96
Table (37):	Pearson correlation test between peak serum carbamazepine level of pediatric patients and studied ECG findings	96
Table (38):	Student's t-test relation between peak serum carbamazepine level in pediatric and complications	97
Table (39):	Student's t-test relation between peak serum carbamazepine level of pediatric patients and ICU admission ..	98

List of Tables

Table No.	Title	Page
Table (40):	ANOVA one-way statistical analysis to compare between peak serum carbamazepine level of pediatric patients and duration of hospital stay	99
Table (41):	Pearson correlation test between Glasgow Coma Scale (GCS) and studied ECG findings in adult patients.....	101
Table (42):	Student's t-test relation between GCS in adult and complications	101
Table (43):	Student's t-test relation between Glasgow Coma scale in adult patients and ICU admission	102
Table (44):	ANOVA one-way statistical analysis to compare between GCS of adult patients and duration of hospital stay.....	103
Table (45):	Pearson correlation test between Glasgow Coma Scale (GCS) of pediatric patients and studied ECG findings.....	104
Table (46):	Student's t-test relation between GCS in pediatric and complications.....	105
Table (47):	Student's t-test relation between Glasgow Coma scale in pediatric patients and ICU admission	106

List of Tables

Table No.	Title	Page
Table (48):	ANOVA one-way statistical analysis to compare between GCS of pediatric patients and duration of hospital stay.....	107
Table (49):	Receiver Operating Characteristic (ROC) Curve for cut-off level of peak serum carbamazepine level as a predictor of complications in adult patients.....	109
Table (50):	Receiver Operating Characteristic (ROC) Curve for cut-off level of Glasgow Coma Scale (GCS) as a predictor of complications in adult patients.....	110
Table (51):	Receiver Operating Characteristic (ROC) Curve for cut-off level of peak serum carbamazepine level of pediatric cases as a predictor of complications.....	111
Table (52):	Receiver Operating Characteristic (ROC) Curve for cut-off level of Glasgow Coma Scale (GCS) of pediatric cases as a predictor of complications.....	112

List of Figures

Figure No.	Title	Page
Fig. (1):	Chemical structure of carbamazepine	5
Fig. (2):	Glasgow Coma Scale Score	22
Fig. (3):	Column chart showing comparison between group Ia and group Ib as regards age distribution	50
Fig. (4):	Column chart showing comparison between group IIa and group IIb as regards age distribution	51
Fig. (5):	Column chart showing comparison between group Ia and group Ib as regards sex distribution.....	53
Fig. (6):	Column chart showing comparison between group IIa and group IIb as regards sex distribution.....	54
Fig. (7):	Column chart showing comparison between group Ia and group Ib as regards manner of toxicity.....	56
Fig. (8):	Column chart showing comparison between group IIa and group IIb as regards manner of toxicity.....	57
Fig. (9):	Column chart showing comparison between group Ia and group Ib as regards delay time.....	59
Fig. (10):	Column chart showing comparison between group IIa and group IIb as regards delay time.....	60

List of Figures

Figure No.	Title	Page
Fig. (11):	Column chart showing comparison between group Ia and group Ib as regards Vital data.....	62
Fig. (12):	Column chart showing comparison between group IIa and group IIb as regards vital data	63
Fig. (13):	Column chart showing frequency of neurological manifestations in adult patients.....	65
Fig. (14):	Column chart showing comparison between group Ia and group Ib as regards GCS.....	66
Fig. (15):	Column chart showing comparison between group Ia and group Ib as regards nystagmus, ataxia and agitation.....	67
Fig. (16):	Column chart showing frequency of neurological manifestations in pediatric patients	68
Fig. (17):	Column chart showing comparison between group IIa and group IIb as regards GCS.....	69
Fig. (18):	Column chart showing comparison between group IIa and group IIb as regards agitation, seizures and dystonia ..	70
Fig. (19):	Column chart showing frequency of cardiovascular manifestations and ECG changes in adult patients	72

List of Figures

Figure No.	Title	Page
Fig. (20):	Column chart showing comparison between group Ia and group Ib as regards cardiovascular manifestations	73
Fig. (21):	Column chart showing comparison between group Ia and group Ib as regards ECG changes	74
Fig. (22):	Column chart showing frequency of cardiovascular manifestations and ECG changes in 96 pediatric patients	75
Fig. (23):	Column chart showing comparison between group IIa and group IIb as regards cardiovascular manifestations	76
Fig. (24):	Column chart showing comparison between group IIa and group IIb as regards ECG changes	77
Fig. (25):	Column chart showing comparison between group Ia and group Ib as regards peak carbamazepine level	79
Fig. (26):	Column chart showing comparison between group Ia and group Ib as regards time passed to reach peak carbamazepine level	79
Fig. (27):	Column chart showing comparison between group IIa and group IIb as regards peak carbamazepine level	80
Fig. (28):	Column chart showing comparison between group IIa and group IIb as regards time passed to reach peak carbamazepine level	81

List of Figures

Figure No.	Title	Page
Fig. (29):	Column chart showing Comparison between group Ia (non-complicated) and group Ib (complicated) adult patients as regards management	83
Fig. (30):	Column chart showing comparison between group IIa (non-complicated) and group IIb (complicated) pediatric patients as regards management	84
Fig. (31):	Column chart showing comparison between group Ia and group Ib as regards percentage of ICU admission...	87
Fig. (32):	Column chart showing comparison between group Ia and group Ib as regards duration of hospital stay	88
Fig. (33):	Column chart showing frequency of complications during hospital stay in 28 adult patients.....	89
Fig. (34):	Column chart showing comparison between group IIa and group IIb as regards percentage of ICU admission...	90
Fig. (35):	Column chart showing comparison between group IIa and group IIb as regards percentage of duration of hospital stay	90
Fig. (36):	Column chart showing frequency of complications during hospital stay in 24 pediatric patients	91
