الملخص العربي

اجريت هذه الدراسة على خمسة عشر مريضا من الرجال بحيث يكون الفك العلوي فاقد لاكثر من ستة اسنان امامية وتابع لتقسيم كينيدي الرابع ، وقد تم اختيار المرضى من عيادات الاستعاضة الصناعية بمستشفى الاسنان التخصصي بالقوات المسلحة وعل ان يكون جميع المرضى ملائمين لعمل غرسات اسنان معدنية

تم تقسيم المرضى الى ثلاث مجموعات متساوية

- ١ - المجموعة الاولى :- تم عمل اطقم جزئية معدنية فوقية مثبتة ومحملة على عدد اثنين غرسة معدنية موضوعة في اماكن الانياب المفقودة
 - ٢ - المجموعة الثانية :- تم عمل اطقم جزئية معدنية فوقية محملة فقط على عدد اثنين غرسة معدنية موضوعة في اماكن الانياب المفقودة ولها نفس مكونات الاطقم الجزئية العادية
 - ٣ - المجموعة الثالثة :- تم عمل اطقم جزئية معدنية عادية وقد تم عمل نفس التصميم للطقم الجزئي في المجموعة الثانية والثالثة بعد تسليم الاطقم تم تقييم الانسجة الساندة للدعامات الرئيسية والغرسات المعدنية اكلينيكيًا واشعاعيًا (عند تسليم الطقم ، بعد ستة اشهر وبعد اثني عشر شهر)
- وقد اظهرت نتائج البحث ان استجابة الانسجة المحيطة بالاسنان الدعامية للمرضى ذوى الغرسات المعدنية افضل من مثيلاتها للمرضى ذوى الاطقم المعدنية المعتادة بدون غرسات معدنية

Acknowledgment

*I am most thankful to **Allah** for all his kindness, grace and help to accomplish this work.*

*I would like to express my sincere gratitude and grateful appreciation to **Prof. Dr. Samira Ibrahim**, Professor, prosthodontic department, Faculty of Oral and Dental Medicine Cairo University for her faithful supervision and guidance, as well as beneficial advice throughout the whole work.*

*I was fortunate to conduct this work under the supervision of **Dr. Ehab Abo EL Roos** Asso. Prof. of Prosthodontics, Faculty of Oral and Dental Medicine Cairo University for his generous assistance, great help and valuable guidance throughout the whole work.*

*I want to express my deep thanks to **Major General Dr/Elsaid Abo Shahba** Professor of oral surgery, Military Medical Academy for his great help and support that enable me to accomplish this work.*

*I am so grateful to **Major General Dr. /Hasan sadk** Professor of oral and maxillofacial surgery, Military Medical Academy for sincier support, help and guidance during the progress of the study.*

*I am also grateful to **Major General Dr. /Mohamed Abd Elkader**, and **Major General Dr. / Mohamed Gomaa** for continuous support and encouragement during the progress of the study.*

*I would also like to thank **Dr. Mahmoud Abd Elrahman** for great help during the study*

*Finally, I want to express my deep thanks to **my colligues** in Maadi Armed Hospital and Spicialiesed Dental Hospital, for great help and support during the entire study.*

Dedication

To my supporting family

بِسْمِ اللَّهِ الرَّحْمَنِ الرَّحِيمِ

قَالُوا سُبْحَانَكَ لَا عِلْمَ لَنَا إِلَّا مَا عَلَّمْتَنَا

إِنَّكَ أَنْتَ الْعَلِيمُ الْحَكِيمُ

صَدَقَ اللَّهُ الْعَظِيمُ

البقرة ٣٢

PROPOSED SOLUTION FOR PROSTHETIC MANAGEMENT OF UPPER ANTERIOR LONG SPAN PARTIALLY EDENTULOUS CASES USING OSSEOINTEGRATED IMPLANTS

Thesis outline submitted to
The Faculty of Oral and Dental Medicine, Cairo University
In the partial fulfillment of the requirements of
Doctor Degree in Prosthodontics

By

Ahmed Amin Moselhy Said

List of figures of materials and methods

Figure no	Description	Page no
1	long span Kennedy class IV	56
2	panoramic view showing 2 metallic balls at proposed implant sites	62
3	vacuum press machine	64
4	transparent surgical template obtained from trial setting of artificial teeth	64
5	Endodontic file used to determine mucosal thickness	65
6	Ridge mapping	65
7	Dental implants in sterile double vial package with its titanium cover screws.	67
8	Electric high torque motor with irrigation system	67
9	Full surgical kit for implant installation	68
10	sequence of drills used for implant installation	68
11	Trapezoidal surgical incision	72
12	Full thickness mucoperiostial flap	72
13	surgical template seated in the patient mouth to mark fixture site with round surgical bur	73
14	Pilot drill	73
15	implant with its fixture mount handled to its position using the insertion tool	74
16	implant was threaded into the bone in clockwise direction using ratchet	74
17	Implant installed with its transferred mounts	75

18	The fixture with its cover screw in position	75
19	Implant finder	78
20	Implant titanium cover screw	78
21	Healing collar threaded into the cover screw	79
22	The ball abutment	83
23	Abutment analog of the same diameter and height of the used ball abutments were replaced in their accurate positions in the impression	83
24	Refractory cast	87
25	Wax pattern	87
26	Chrome-cobalt framework	88
27	Metallic framework tried in the patient,s mouth	88
28	finished denture	89
29	carbide fissure bar was used to create enough space to accommodate the socket with its plastic sleeve	89
30	Sockets were placed on their balls in the patient's mouth	90
31	Plastic sleeves around the socket were removed to create a gap around the socket	90
32	Activator and deactivator instruments	91
33	Labial and palatal views of the finished denture in the patient mouth	91
34	Healing collars were used as two rest seat at the canine areas to support the partial denture	95
35	Chrome cobalt metal framework	95
36	Finished denture showing two metallic stoppers rest on the healing collars of the implants	96

37	Finished denture in the patient mouth	96
38	Pressure control sensor probe	100
39	Digital panoramic Orthoslice 1000 system	103
40	Digipan cassette	103
41	Control panel	104
42	Laser beam adjusted according to median line and Frankfort plane	104
43	The locations of the lines and reference points from which the measurements were made	108
44	Bone height measurement of the natural abutment	108
45	Bone height measurement of the implant	109
46	Bone density measurement of the implant	109
47	Bone density measurement of the natural abutment	110

List of tables

Table no	Description	Page no
1	Patient satisfaction questionnaire.	100
2	Percentage of patient satisfaction at different follow up intervals.	111
3	Descriptive table showing the means, standard deviation and P- values for changes in the gingival index of natural abutments	112
4	Descriptive table showing Comparison of mean of difference of Gingival Index of abutment at 0 to 12 months.	113
5	Descriptive table showing the means, standard deviation and p- values for changes in the gingival index of implants.	114
6	Descriptive table showing comparison of mean of difference of gingival index of implants at 0 to 12 months.	115
7	Descriptive table showing the means, standard deviation and P- values for loss of epithelial attachments of natural abutments.	117
8	Descriptive table showing Comparison of mean of difference of loss of epithelial attachment of abutment at 0 to 12 months.	118
9	Descriptive table showing the means, standard deviation and p- values for loss of epithelial attachments of implants	119
10	Descriptive table showing Comparison of mean of difference of loss of epithelial attachment of implants at 0 to 12 months	120

11	Descriptive table showing the mean values, SD and p values of the vertical measurments in mm at the abutments for studied groups at different time intervals.	121
12	Descriptive table showing comparison between the mean differences in the vertical measurments in mm at the abutments of studied groups at 0 to 12 months	122
13	Descriptive table showing the mean values, SD and P value for the vertical measurments in mm at the implants of the studied groups at different time intervals.	123
14	Descriptive table showing comparison between mean differences of bone height in the implants of the studied groups at 0 to 12 months.	124
15	Descriptive table showing the mean values, SD and p values for the bone density of the abutments for studied groups at different time intervals.	125
16	Descriptive table showing comparison between the mean differences of bone density in the abutments of the studied groups at 0 to 12 months.	126
17	Descriptive table showing the mean values, SD and p value for the bone density of the implants of the studied groups at different time intervals.	127
18	Descriptive table showing comparison between the mean differences of bone density around the implants of the studied groups.	128

List of figures of results

Figure no	Description	Page no
1	Changes of the mean values of gingival index of abutments in different groups along the follow up period.	113
2	Descriptive figure showing comparison of mean of difference s of gingival index of abutments of studied groups	114
3	Changes of the mean values of gingival index of implants in different groups along the follow up period.	115
4	Descriptive figure showing comparison of mean of differences of gingival index of implants of studied groups	116
5	Changes of the mean values of epithelial attachment measurments of the abutments in different groups along the follow up period.	117
6	Descriptive figure showing comparison of mean of difference of loss of epithelial attachment of abutments of studied groups	118
7	Changes of the mean vales of epithelial attachment measurments of implants in different groups along the follow up period.	119
8	Descriptive figure showing comparison of mean of difference s of loss of epithelial attachment of implants of studied groups	120
9	Changes of the mean values of the vertical measurments in mm at the abutments in different groups along the follow up period.	121

10	Descriptive figure showing comparison of mean differences of bone height of abutments (bone loss).	122
11	Changes of the mean values of vertical measurements of implants in different groups along the follow up period.	123
12	Descriptive figure showing comparison of mean differences of bone height of implants	124
13	Changes of the mean values of bone density measurements of abutments in different groups along the follow up period.	125
14	Descriptive figure showing comparison of the mean differences of bone density of abutments	126
15	Changes of the mean values of bone density of implants in different groups along the follow up period	127
16	Descriptive figure showing comparison of the mean differences of bone density of implants.	128
