

**A Three-Dimensional Finite Element Stress
Analysis Studying the Influence of Bar Position
on Implant-Retained Mandibular Overdenture**

**Thesis Submitted to
The Faculty of Oral and Dental Medicine
Cairo University
In Partial Fulfillment for the Requirements of Master
Degree in Removable Prosthodontics**

By

Ayman Hany Mahmoud Amin

ACKNOWLEDGMENT

First I would like to thank "**God**" for giving me the power and support to finish this work.

I would like to express my honor and respect to **Dr. Amal Rekaby Taha**, Professor of Prosthodontics, Cairo University for her great support and encouragement which helped me to finish this work.

I am really thankful to **Dr. Amal Mahmoud Ibrahim**, Assistant Professor of Prosthodontics, Cairo University for her help, patience and guidance in order to make this work possible.

Moreover I would like to express my deepest gratitude to **Dr. Sahar Ali Fawzy**, Lecturer of Systems and Biomedical Engineering, Cairo University, for her great help in teaching me new skills, valuable time and encouragement.

I would like also to thank **Dr. Ahmed Elbially**, Assistant Professor of Systems and Biomedical Engineering and **Dr. Ahmed Hisham**, Assistant Professor of Systems and Biomedical Engineering, Cairo University for their help and suggestions.

Last but not least I would like to thank my dear parents and my aunt for their unlimited help and support which gave me the strength to finish this work.

REFREEING DECISION	
INTRODUCTION	1
REVIEW OF LITERATURE	3
I) Implant Retained Overdentures	3
1) Advantages of implant-retained mandibular overdentures	3
2) Disadvantages of implant-retained mandibular overdentures	5
II) Mandibular Implant Prosthesis	6
1) Removable implant overdentures	6
A) Mandibular tissue supported implant overdentures	7
B) Mandibular combined implant tissue supported overdentures	7
i) Two-implant supported overdentures	7
ii) Three-implant supported overdentures	9

C) Mandibular implant supported overdentures	10
i) Treatment options for mandibular implant supported prostheses	11
2) Mandibular implant fixed prostheses	
i) Treatment options for fixed prostheses	14
3) Removable overdentures versus Fixed restorations	14
III) Overdenture Attachments	15
Classification of precision attachments	
1) Intracoronal attachments	17
2) Extracoronal attachments	17
3) Bar attachments	17
4) Stud attachments	17
5) Auxillary attachments	17
Bar attachments	18
Bar joints	18
• Single sleeve bar joint	
• Multiple sleeve bar joints	19
Bar units	19
Types of bar attachments	19
A. Ackermann bar	20
B. Dolder bar	20
C. Hader bar	20
D. Baker Clip	20
E. C.M. bar	21
F. Ceka bar	22
G. M.P. Channels	22
H. OT Multiuse bar	22
I. Customized bars	23
	24
	24

According to the manner of connection to the implants bars may be classified into	25
A. Screw retained	25
B. Cement retained	26
C. Combined screw and cement retained	27
• Splinted versus non splinted implants	27
IV) Types of stress analysis	30
1. Strain gauge	30
2. Photoelasticity	32
3. Finite element analysis	33
AIM OF THE STUDY	38
MATERIALS AND METHOD	39
I. Three dimensional drawing of the model components	40
1. The mandible	40
2. The implant	43
3. Bone cylinders	44
4. Retaining screw	45
5. Transmucosal element	46
6. Castable cylinder	46
7. Prosthetic screw	47
8. The bar	48
9. The overdenture	48
II. Steps of assembling the components to form the three	49

models	
III. Defining the material properties for each component	53
IV. Defining contacts and gaps between components	54
V. Defining loads and restraints	55
1. Loads	
2. Restraints	
VI. Meshing of the model	57
VII. Running the analysis	58
VIII. Collection of the results	58
RESULTS	59
I. Unilateral vertical load	60
1. Model 1	62
2. Model 2	69
3. Model 3	76
II. Unilateral oblique load	83
1. Model 1	84
2. Model 2	92
3. Model 3	98
DISCUSSION	105
I. Discussion of the methodology	105
1. Model construction	106
2. Material properties	108
3. Loads	109

A. Load magnitude	109
B. Load direction	109
4. Collection of the results	109
A. Von Mises stress	110
B. Vertical stress	110
II. Discussion of the results	111
1. Patterns of stress distribution	111
2. Effect of splinting	114
A. Unilateral vertical load	114
B. Unilateral oblique load	116
SUMMARY AND CONCLUSIONS	119
REFERENCES	121
ARABIC SUMMARY
