Formulation and evaluation of particulate systems for targeted delivery of vaccines

A Thesis

Presented to the Graduate School
Faculty of Pharmacy, Alexandria University
In Partial Fulfillment of the
Requirements for the Degree

Of

Doctor of Philosophy

In

Pharmaceutical Sciences
(Pharmaceutics)

By

Sally Galal Abd El-Haleem

M. Pharm. Sci., Alexandria University

2010

B
011V

Formulation and evaluation of particulate systems for
targeted delivery of vaccines

Presented by

Sally Galal Abd El-Haleem

M. Pharm. Sci., Alexandria University

For the Degree

Of

Doctor of Philosophy

In

Pharmaceutics

Examiners' Committee

Prof. Dr.

Nawal Mohamed Khabaly

Approved

Nawal Mohamed Khabaly

Prof. Dr.

Eko

Prof. Dr.

Nahida Ahmed Boraie

Nahida Boraie

Prof. Dr.

Ossama Y. Abdallah

O. Abdallah

SUPERVISORS

Prof. Dr. Nawal Mohamed Khalafallah -----

Professor Emeritus of Pharmaceutics

Department of Pharmaceutics

Prof. Dr. Osama Yousef Abdallah -----

Professor Emeritus of Pharmaceutics

Department of Pharmaceutics

Prof. Dr. Hesham Said -----

Professor of Biotechnology

Institute of graduate studies and research

Foreign supervisor from University of London, UK

Prof. Dr. Oya Alpar -----

Professor Emeritus of Pharmaceutics

School of Pharmacy

University of London

Dedicated to

The Soul of My Beloved Inspiring Dad

My Great Mama

My Sincere Sister

And

My Dear A.D.S. triple

Acknowledgments

First of all I thank Allah for the countless blessings he has granted me, simply the blessing of existence....., faith, health, and persistence to finish this piece of research the way I wished it to be.

My deepest gratitude and sincere appreciation to Prof. Oya Alpar for giving me the chance to join her research group, instructive supervision and kind advice. It has been a rich life and science experience for me; thanks a lot.

I admit I have tried several times to phrase something to express what I want to say to my dearest Professors and Supervisors Prof. Nawal Khalfallah and Prof. Osama Abdallah, words always seem to be deficient, let me try this one " My uttermost respect, gratitude, and love, you have been and still teaching me a lot in science and life, never felt I'm dealing with professors but rather family members. This work would never come to completion without your noble scientific and moral support".

My sincere appreciation to Prof. Hesham Said, your guidance, advice and practical training at the beginning of this work were indispensable to complete it properly.

To all my colleagues in our cosmopolitan lab 341, working with you have added a lot to me as a person and researcher, thanks for all the good times. Special thanks to Dr. Soma for help with animal experiments, Dr. Xiong Wei and Manny for leading me in my first steps with cell culture work. Helena for problem solving tips in protein analysis. Haliza, Stephan, Richard, Afendi, Rania, Abd-Elbary, and my dear Rihab.

To my dear friends, Khuloud and Wafaa (Al Jamal sisters), Hanan, Naziha and Rihab, London would never be the same without you, I came with one sister, and flied back with 6, thanks for the valuable scientific lunch time discussions and the fun times we had in and out of SOP. Special thanks to Khuloud for providing me with key materials in this research work.

I'm deeply grateful for Mr. Mohamed El-beshbishi and Mr. Reda Ismail families, Magda, Reem, Sarah, and Alice; so I came back with much bigger family too, lucky me!

3. Particle purification and determination of the particle yield.....	31
4. Characterization of the nanoparticles.....	31
4.1. Particle size analysis.....	31
4.2. Analysis of Zeta potential.....	32
4.3. Nanoparticle morphology by transmission electron microscopy (TEM).....	32
5. Protein adsorption to DC-Chol or LLD- modified nanoparticles.....	32
6. Determination of BSA loading capacity of DC-Chol or LLD- modified nanoparticles...	32
7. In vitro release of BSA	33
8. Structural analysis of BSA released from the nanoparticles.....	33
8.1. Structural integrity by SDS-PAGE.....	33
8.2. Conformational stability of BSA.....	35
8.2.1. Secondary structure by Circular Dichroism (CD) spectroscopy.....	35
8.2.2. Tertiary structure by Spectrofluorimetry.....	36
Results and Discussion.....	37
1. Preparation and characterization of DC-Chol and LLD modified nanoparticles.....	37
1.1. Choice of Solvent.....	37
1.2. Establishing a solvent/ non-solvent system.....	38
1.2.1 Chloroform/ethanol solvent/non-solvent system.....	38
1.2.2. THF/water solvent/non-solvent system.	38
1.2.2.1. Effect of non-solvent.....	39
1.3. Effect of polymer concentration.....	40
1.4. Effect of Lipid type and concentration.....	42
2. Stability of DC-Chol and LLD modified nanoparticles in various media	45
3. Protein loading characteristics of DC-Chol and LLD modified nanoparticles	47
4. In vitro release studies of BSA from DC-Chol and LLD modified nanoparticles	51
5. Structural analysis of BSA released from lipid modified PLA-PEG nanoparticles	54
5.1. Structural integrity by SDS-PAGE.....	54
5.2. Conformational stability.....	56
Conclusions.....	61

Chapter 2:

Cationic Lipid Modified PLA-PEG Nanocomposites for Immunization Against Hepatitis B

Introduction.....	62
Experimental.....	64
Materials.....	64
Instruments.....	65
Methods.....	65
1. Preparation and characterization of DC- and LLD- NPs.....	65
2. Cell culture.....	65
3. Cell Viability (Cytotoxicity) studies	66
3.1. MTT assay.....	66
3.2. Measurement of transepithelial electrical resistance (TEER).....	67
4. Cellular uptake of DC- or LLD- NPs by macrophage cell line (J774A.1).....	67
5. Preparation of vaccine formulations.....	68
6. In vitro release of HbsAg from nanoparticles.....	68
7. Structural integrity of HbsAg released from the NPs by SDS-PAGE.....	68

8. In vitro antigenicity of the released HbsAg by western blotting.....	69
9. Immunization studies with HbsAg loaded NPs.....	70
9.1. Animals.....	70
9.2. Immunization study protocol.....	70
9.3. Collection of samples.....	71
10. Characterization of the immune response.....	72
10.1. Analysis of systemic (serum) and mucosal Antibody response.....	72
10.2. Spleen cell cultures; In vitro re-stimulation of spleen cells and antigen specific cytokine analysis.....	72
10.2.1. Preparation of single cell suspensions.....	72
10.2.2. In vitro stimulation of Naïve and primed spleen cells with soluble antigen and cytokine analysis.....	73
10.3. Statistical analysis.....	74
Results and Discussion.....	75
1. In vitro Cell Viability	75
1.1. MTT assay.....	75
1.2. Monolayer integrity.....	78
2. Cellular uptake Studies.....	81
3. Preparation of vaccine formulations.....	84
4. Release studies of HBsAg from vaccine formulations.....	85
4.1. Release rate.....	85
4.2. Structural integrity and in vitro antigenicityof the released HBsAg.....	86
5. Immunization studies.....	87
5.1. Analysis of HBsAg-specific responses after subcutaneous administration.....	87
5.1.1. Systemic IgG immune response.....	87
5.1.2. IgG subtype profiling.....	88
5.1.3. Splenocyte culture studies.....	90
5.2. Analysis of HBsAg-specific responses after intranasal administration.....	94
5.2.1. Systemic IgG immune response and IgG subtype profiling.....	94
5.2.2. Mucosal IgA immune response.....	96
5.2.3. Splenocyte culture studies.....	98

Chapter 3:

Cationic Lipid Modified PLA-PEG Nanocomposites as DNA carriers

Introduction.....	100
Experimental.....	104
Materials.....	104
Instruments.....	105
Methods.....	105
1. Preparation of the nanoparticles	105
2. Loading the nanoparticles with plasmid DNA.....	106
3. Gel retardation assay.....	106
4. Ethidium bromide exclusion assay.....	107
5. Stability to polyanion exchange.....	107

6. Stability to nuclease digestion.....	107
6. 1. Nuclease digestion.....	107
6.2. Analysis of DNA conformational stability using Densitometry.....	108
7. In vitro release rate studies.....	109
8. Structural integrity of the released plasmid DNA.....	110
9. Cell culture	110
10. Cell Transfection protocols.....	110
10.1. Seeding of Cell Culture Plates.....	110
10.2. In vitro cell transfection.....	110
10.3. Quantification of Luciferase Expression using Promega Luciferase Assay Kit.....	111
10.4. Quantification of Total Protein by Pierce BCATM Protein Assay Kit.....	111
11. Cell Viability (Cytotoxicity) Assay using Tetrazolium Dye (MTT).....	111
12. Statistical analysis.....	111
Results and Discussions.....	112
1. DNA binding onto cationic NPs, effect of lipid type and concentration.....	112
1.1. Formation and colloidal properties of pDNA-nanoplexes.....	112
1.2. Binding capacity of cationic NPs & Physical stability of the nanoplexes.....	115
1.3. Ethidium bromide exclusion assay.....	116
2. Stability to polyanion exchange.....	118
3. Stability to nuclease digestion.....	119
4. Release rate studies.....	122
5. In vitro transfection studies.....	122
